“Edinburgh isn’t so much a city, more a way of life … I doubt I’ll ever tire of exploring Edinburgh, on foot or in print.”

Ian Rankin
Best-selling author and alumnus
Influencing the world since 1583

For more than 400 years the University of Edinburgh has been changing the world. Our staff and students have explored space, won Nobel Prizes and revolutionised surgery. They’ve published era-defining books, run the country, made life-saving breakthroughs and laid the foundations to solve the mysteries of the universe.

Our distinguished alumni include NASA astronaut Piers Sellers, former MI5 Director-General Dame Stella Rimington, Olympians Sir Chris Hoy and Katherine Grainger and historical greats such as philosopher David Hume, suffragist Christall Macmillan, who founded the Women’s International League for Peace and Freedom, and physicist and mathematician James Clerk Maxwell.

International collaboration
An internationally renowned centre for academic excellence, we forge world-class collaborations with partners such as the California Institute of Technology (Caltech), Stanford University, the University of Melbourne, Peking University, the University of Delhi and the University of Kwazulu-Natal. As a member of the League of European Research Universities and the Coimbra Group, we link up with leading institutions across Europe.

Linking research and commerce
We were one of the first UK universities to develop commercial links with industry, government and the professions. Edinburgh Research and Innovation (ERI) promotes and commercialises our research excellence and can assist you in taking the first step to market, through collaborative research, licensing technology or consultancy.

Enhancing your career
We are committed to embedding employability in your University experience and have one of the Russell Group’s best track records for graduate employment. From volunteering schemes to our sector-leading Careers Service, we provide you with opportunities to develop your skills, knowledge and experience, giving you an edge in the competitive job market.

TOP 50
We’re consistently ranked one of the top 50 universities in the world. We’re 19th in the 2016/17 QS World University Rankings.

4TH
We’re ranked fourth in the UK for research power, based on research quality and breadth.*

83%
The majority of our research – 83 per cent – is considered world leading or internationally excellent.*

23RD
We’re ranked 23rd in the world for the employability of our graduates.**

£305m
In 2014/15 we won £305 million in competitive research grants.

20
We’re associated with 20 Nobel Prize winners, including physicists Peter Higgs, Charles Barkla and Max Born, medical researcher Peter Doherty and biologist Sir Paul Nurse.

137 NATIONALITIES
Students from two-thirds of the world’s countries study here.

* Research Excellence Framework (REF) 2014
** Latest Emerging Global Employability University Ranking
Taught masters programmes

Our taught Master of Science (MSc) programmes last 12 months, consisting of two semesters of taught courses followed by an individual supervised research project and dissertation.

www.ed.ac.uk/pg/877

Computational Chemistry & Modelling

PgCert 1 yr FT (2 yrs PT)

Programme description
Computational chemistry is the development and practical application, through high-performance computing, of quantum and classical mechanics (and informatics) to the study of chemical processes. These range from fundamental spectroscopic events in the gas phase to the nature of protein-drug interactions.

Computational chemistry techniques are recognised as important tools in the chemical sciences where they are employed to answer questions posed by fundamental science and to resolve challenging problems faced by industry. This programme will provide a broad knowledge and understanding of computational chemistry which can be built upon by further study for an MSc or PhD, or employed for practical applications within the many areas of chemistry and wider industry.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
- Electronic Structure Theory and Classical Simulation Methods
- Computational Modelling of Materials: Computer-aided Drug Design

Programme structure
You will study key areas of modern computational chemistry and its applications. This includes the theoretical background and application of quantum and classical techniques to the study of molecular systems, materials and the solid state. In addition, methods of computational chemistry applicable to the modelling of biological processes and to rational drug design are presented.

You will be taught by academic staff at the EiSICHEM Research School of Chemistry, a partnership between the Schools of Chemistry at the University of Edinburgh and the University of St Andrews. You will learn and interact with your peers through a range of state-of-the-art online distance learning technologies. You will also have access to a computing cluster, in order to learn how to perform an array of computational chemistry calculations and molecular simulations using popular computational chemistry software.

Career opportunities
Graduates from this programme will enhance their employability prospects for a range of jobs offered by the chemical and related industries, such as rational drug design in a small biotechnology company, or catalysis and materials research in a large corporation. In addition, this qualification is an ideal platform on which to base further study, such as towards an MSc or PhD, or employed for practical applications within the many areas of chemistry and wider industry.

www.ed.ac.uk/pg/448

Materials Chemistry

MSc 1 yr FT

Programme description
Materials chemistry has emerged as an important sub-discipline within chemistry. It cuts across the traditional organic/inorganic/physical boundaries of chemistry and overlaps many disciplines from engineering to the biosciences.

Materials chemists now have a leading role in areas such as microelectronics, polymer science, catalysis and nanotechnology. They also make an important contribution to areas of more traditional chemistry such as the pharmaceutical sector where understanding the physical properties of intermediates and products is now recognised as essential in optimising the synthesis and properties of pharmaceutically active ingredients in medicines.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
- Advanced lecture courses such as: Properties & Reactions of Matter; Chemistry of Functional Materials; Physical Techniques in Action; Techniques and Concepts in Inorganic Chemistry. These are studied concurrently with a predominantly practical-based course that develops skills in research methods. You will then proceed to a period of full-time research project work leading to the submission of your masters dissertation.

Programme structure
Lectures are given by leading researchers in the area of materials chemistry. The lecture courses are supported by tutorial sessions and assessed by examination in April/May.

The Research Methods course includes an exciting, problem-solving exercise where you learn important skills such as communicating science, dealing with intellectual property and grant application writing, together with a literature survey and written report, defining the scope of the subsequent individual research project work. The programme also includes a series of writing skills workshops.

Career opportunities
You will be well suited to take up roles in the chemical and pharmaceutical industries, either in research and development or sales and marketing. You will gain valuable work experience in a real-life research environment. Alternatively, a masters degree is a precursor to a PhD degree.

Our programmes teach students the valuable skills they need to move into other areas outside chemistry. Careers in IT, management or finance are possibilities after completing your degree.

www.ed.ac.uk/pg/450

Medicinal & Biological Chemistry

MSc 1 yr FT

Programme description
This programme requires a thorough understanding of molecules, their structures, properties and synthesis, and a chemical understanding of the nature of biological structures, from macromolecules to cells, the design of pharmaceutical materials in the laboratory and their function in clinical settings.

The knowledge and skills acquired on this programme will leave you well equipped to compete for positions related to drug discovery in chemical, pharmaceutical or biotechnological companies.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
- Advanced lecture courses in: Synthetic Organic Chemistry; Biomacromolecules; Chemical Medicine; Biophysical Chemistry.

The career options are presented which the programme equips the student with.

Programme structure
Lectures are given by leading researchers in the area of medicinal and biological chemistry. The lecture courses are supported by tutorial sessions and assessed by examination in April/May.

The Research Methods course includes an exciting, problem-solving exercise where you learn important skills such as communicating science, dealing with intellectual property and grant application writing, together with a literature survey and written report, defining the scope of the subsequent individual research project work. The programme also includes a series of writing skills workshops.

Career opportunities
You will be well suited to take up roles in the chemical and pharmaceutical industries, either in research and development or sales and marketing. You will gain valuable work experience in a real-life research environment. Alternatively, a masters degree is a precursor to a PhD degree.

Our programmes teach students the valuable skills they need to move into other areas outside chemistry. Careers in IT, management or finance are possibilities after completing your degree.

Entry requirements
A UK 2:1 honours degree or its international equivalent (www.ed.ac.uk/ international/graduate-entry), in chemistry or a closely related discipline with a strong chemistry component. Your undergraduate degree must have included maths and biology.

English language requirements:
See page 12.

Fees and funding
For fees see page 12 and for funding information see page 14.

Programme Secretary Claire Dickson Tel +44 (0)131 651 7257 Email chemistry.pgt@ed.ac.uk

The University of Edinburgh Chemistry Postgraduate Opportunities 2017
Research opportunities

The School of Chemistry’s vibrant research community is divided into four specialist disciplines. With considerable overlap between these, you will find many research opportunities to fit your interests: www.ed.ac.uk/pg/16

There are opportunities to pursue research through the following degree routes:

- PhD: three years full-time (six years part-time available for UK/EU students)
- MPhil: two years full-time
- MSc by Research: one year full-time PhD

As a PhD candidate you pursue a research project under continuous supervision, resulting in a thesis that makes an original contribution to knowledge. You will gain expert knowledge in your field of interest, and develop the skills to research in that field. The majority of our recent graduates have gone into research scientist roles in academia or industry. Others found employment, with companies such as Johnson & Johnson, Charwood Molecular and Sublicare Pharma, in roles such as process development chemist, clinical scientist, technical analyst and project manager.

Centres for Doctoral Training

The School is both leading, and involved in, many Centres for Doctoral Training funded by UK research councils, industry and the UK government. Applications for these PhD studentships often require the support of a PhD supervisor who is partnered with a particular Training Centre. Please note that in the majority of cases, eligibility is restricted to UK or EU nationals, and annual application deadlines apply.

- NERC E3: www.gla.ac.uk/research/opportunities/isensingmeasurement
- SOFI – Soft Matter and Functional Interfaces: www.dur.ac.uk/softmatter/solfilt
- EAST BIO: www.eastcotbediop.ac.uk

MPhil

The MPhil degree resembles a PhD but takes two years instead of three and does not carry the same requirement for original contribution to knowledge. You pursue your individual research project under supervision, submitting your thesis at the end of the project.

MSc by Research

An MSc by Research, which takes one year, is based on a research project tailored to your interests. The project is both a shorter alternative to an MPhil or PhD and a precursor to either, with an MSc project potentially expanding into MPhil or doctorate work as it evolves.

The chemistry/biology interface

This is a broad area, with particular strengths in protein structure and function, mechanistic enzymology, proteomics, peptide and protein synthesis, protein folding, recombiant and synthetic DNA methodology, biologically targeted synthesis and the application of high throughput and combinatorial approaches. We also focus on biophysical chemistry, the development and application of physicochemical techniques to biological systems. This includes mass spectrometry, advanced spectroscopy and microscopy, as applied to proteins, enzymes, DNA, membranes and biosensors.

Experimental and theoretical chemical physics

This is the fundamental study of molecular properties and processes. Areas of expertise include probing molecular structure in the gas phase, clusters and nanoparticles, the development and application of physicochemical techniques such as mass spectrometry to molecular systems, and the EaStCHEM surface science group, whose members study complex molecules on surfaces, probing the structure-property relationships employed in heterogeneous catalysis. World-class computational facilities including teraflop capability are available through EaStCHEM Research Computing.

Synthesis

This research area encompasses the synthesis and characterisation of organic and inorganic compounds, including those with application in homogeneous catalysis, nanotechnology, coordination chemistry, ligand design and supramolecular chemistry, asymmetric catalysis, heterocyclic chemistry and the development of synthetic methods and strategies leading to the synthesis of biologically important molecules (including drug discovery). The development of innovative synthetic and characterisation methodologies (particularly in structural chemistry) is a key feature, and we specialise in structural chemistry at extremely high pressures.

Materials chemistry

The EaStCHEM materials group is one of the largest in the UK. Areas of strength include functional polymer synthesis and catalysis, functional (for example magnetic, superconducting and electronic) materials, strongly correlated electronic materials, battery and fuel cell materials and devices, porous solids, fundamental and applied electrochemistry, polymer microarray technologies; and technique development for materials and nanomaterials analysis.

Entry requirements

In general, any research area in the School of Chemistry will require you to have a degree in a related field. We may consider your application if your background is not directly related to chemistry; contact your potential supervisor for advice. Please check the specific entry requirements for your programme online before applying.

The University of Edinburgh

Research opportunities

Optical Medical Imaging with Healthcare Innovation & Entrepreneurship

PhD 4 yrs FT

Research profile

OPTIMA is the Engineering and Physical Sciences Research Council (EPSRC) and Medical Research Council (MRC) Centre for Optical Medical Imaging. It brings together world-class research teams in both the clinical and physical sciences.

OPTIMA is hosted by the universities of Edinburgh and Strathclyde. Our focus is on training the next generation of scientific entrepreneurs in healthcare technologies and we place great emphasis on interdisciplinary projects, commercially relevant training and strong links to the clinical environment. Our supervisors have international standing in their respective fields. Collectively they have published more than 1,300 peer-reviewed papers, received research grant income in excess of £110 million and supervised more than 300 PhD students.

This four-year PhD with integrated study programme combines excellent research and PhD supervision in world-leading scientific environments with a bespoke programme of business training in healthcare innovation and entrepreneurship.

You will choose from a portfolio of exciting and innovative projects that break down the barriers between physics, chemistry, medicine and engineering and use cutting-edge optical technology to address key clinical questions via medical imaging.

In addition to optical medical imaging research, you will embark on a bespoke programme of integrated study in healthcare innovation and entrepreneurship. Training modules for this run concurrently with your research to help you understand and appreciate the innovative leaps you are making and capitalise on your discoveries.

Case study: Edinburgh’s research with impact

Protecting the population from air pollution

Up to 30 per cent of the EU urban population is estimated to be exposed to pollutant levels greater than the EU-specified limit. Air pollution is the environmental factor with the greatest impact on human health in Europe. Dr Matthew Heal of the EaStCHEM School of Chemistry has been leading a programme of pollution research on the three most important air pollutants – particulate matter, ozone and nitrogen dioxide – for 20 years, contributing valuable findings that are changing the way the world protects itself from the effects of pollution.

Project background

Exposure to particulate matter alone is estimated to reduce average life expectancy in the UK by six months, with estimated costs of £0bn–£2bn a year. The group led by Dr Heal recognised the importance of detecting particulate matter and other airborne pollutants, and set about analysing current prescribed air quality assessment methods. As well as finding that these systems are subject to inaccuracies, they researched and defined optimal methods for new, more accurate and reliable measurements. Dr Heal’s group research also showed how atmospheric models can simulate current ozone concentrations with high spatial resolution and predict future concentrations, as well as regional hospital admissions and deaths resulting from a range of future emissions and climate change scenarios.

Project results

The findings from Dr Heal and his team have been groundbreaking and have contributed evidence for the formulation of government policies, informing UK national guidance and policy-evidence documents for the Department for Environment, Food and Rural Affairs (Defra), the Health Protection Agency, and the UK’s environment agencies. The more accurate and reliable methods originating from the Edinburgh team are now incorporated into protocols applied to measurements of nitrogen dioxide for statutory air quality assessments in all urban areas in the UK.
About the School of Chemistry

The teaching of chemistry at Edinburgh has a long and distinguished history: 2013 marked our 300th anniversary of the establishment of the ‘Chair of Physick and Chemistry’.

Today we continue that proud tradition as a leader in the field. In collaboration with the University of St Andrews, we have formed EaStCHEM, one of the largest and most successfully funded chemistry research organisations in the UK. EaStCHEM was ranked second in the UK in the Research Excellence Framework (REF) 2014 power table – a combination of excellence and volume. Overall, 95 per cent of our research was classed world leading or internationally excellent.

Our membership of ScotCHEM takes this collaborative spirit even further, providing links with all the major schools of chemistry in Scottish universities.

We can offer you a large, internationally recognised research community, and the benefits of the latest facilities, well-published and awarded academic staff, a lively graduate school environment and a broad range of study opportunities.

The best teaching

The School of Chemistry offers a globally connected teaching community, enriched by incoming students from around the world. Our programmes are all accredited by the Royal Society of Chemistry. We’re also a recent ‘Best Department’ winner in the Edinburgh University Students’ Association Teaching Awards.

We teach all the chemistry skills you will require for employment in the modern research environment. We have a well-developed training policy that ensures many different sources of training are available to you including courses at School, College and University level.

Rewarding research

Pursuing a research degree at the School of Chemistry could be one of the best experiences of your life. In addition to gaining research skills, making friends, meeting eminent researchers and being part of the research community, a research degree will help you to develop invaluable transferable skills which you can apply to academic life or a variety of professions outside of academia.

Supporting business opportunities

As well as pursuing research for the purpose of academic advancement, we are ever alert to the commercial possibilities of our findings, and we work with business to identify and develop these opportunities. Should your research show potential for industrial applications, we have the tools available to support its development and commercial success.

Facilities and resources

Our facilities are among the best in the world, offering an outstanding range of capabilities. You’ll be working in modern laboratories that meet the highest possible standards, packed with state-of-the-art equipment for both analysis and synthesis.

We offer on-site services ranging from full-time glassblowing and electronics workshops to video conferencing and computer research support.

We have close links with the Edinburgh Parallel Computing Centre, whose Europe-leading supercomputing capabilities put us at the forefront of computational chemistry.

Make it, test it

You will have access to facilities for the synthesis and characterisation at ambient and extreme conditions of organic and inorganic compounds, including those with application in homogeneous catalysis, nanotechnology, supramolecular chemistry, drug discovery and ligand design. The development of innovative synthetic and characterisation methodologies is a key feature of our work, using the latest techniques and technology.

A 1,000-tonne pressure chamber enables the synthesis of materials at high pressures and temperatures. Fluorescence spectroscopy and microscopy instruments are available within our Collaborative Optical Spectroscopy Micromanipulation & Imaging Centre (COSMIC).

We have excellent facilities for creating and analysing biomolecules, including advanced mass spectrometry, NMR stopped-flow spectrometers, electron paramagnetic resonance spectroscopy, high-performance liquid chromatography, fast protein liquid chromatography and atomic absorption spectroscopy.

High-specification hardware

For NMR in the solution and solid state, we have 10 spectrometers at field strengths from 200 MHz to 800 MHz; our mass spectrometry resource has a 12T FT-ICR mass spectrometer for routine mass analysis, and we have expertise in mass spectrometry imaging and ion mobility mass spectrometry. New combinatorial chemistry laboratories are available, equipped with a modern fermentation unit.

Collections of the University

The University of Edinburgh has one of the world’s great collections, which has been growing ever since its foundation in 1583. Our collections include rare books, archives and manuscripts, art, historical musical instruments and a wide range of museum objects from geological specimens to anatomical models. If laid out end to end, we would have almost 60 kilometres of shelving and storage space devoted to our heritage material, from 1st century Greek papyrus fragments to new works of sculpture. This is curated by specialist staff across 45 sites and used for our teaching and research by the wider public community.

The Centre for Research Collections in the Main Library is the hub for all our collections, where specialist curators make them available for study, research and pleasure. Postgraduate students are welcome to study original objects and have made many important research discoveries while working on the archives. You will find an incredible range of material in our collections that is available nowhere else in the world.
Community

As part of our Graduate School, you’ll be working in a large and dynamic research environment – one of the largest in the UK.

Located on the King’s Buildings campus (see page 16) in the south of Edinburgh, we form part of a thriving hub of science teaching and research, with all the amenities you’d expect from a large campus along with easy access to the city centre.

Collaboration and interaction

Ours is an extremely interdisciplinary area, and many of our researchers interact with those in physics, biology, materials science, geosciences, engineering and other disciplines. With world-leading and internationally significant research being undertaken in all these areas, you’ll find having collaborative access to this calibre of expertise is a valuable asset to your studies.

We recognise the value of interaction with the wider world of chemistry, and will encourage you to broaden your perspective by attending and presenting at international conferences. Teaching can also open the way to new approaches to research; you’ll have the chance to find this out for yourself if you become involved in tutoring undergraduates.

Chemical bonds

The School organises regular research talks and visiting speaker symposia, as well as lecture courses on specialised techniques and safety.

Researchers can take part in the annual residential conference at Firbush Point, the University’s outdoor pursuits centre on the shores of Loch Tay.

You’ll be invited to join our chemistry society, ChemSoc, the oldest society of its kind in the world, established in 1785. A very active group for both students and teaching staff, ChemSoc organises a full and varied programme of lectures, and social and sporting events.

Employability and graduate attributes

With your postgraduate degree you will be perfectly placed for a successful career in the chemical or pharmaceutical industries, such as in research and development or sales and marketing, or to continue in academia. At Edinburgh you will also learn valuable skills that will open doors in areas outside chemistry.

Many of the skills that will ensure success in your postgraduate studies at the School of Chemistry will benefit your personal and professional development regardless of the direction your career may take, be it into finance, management, IT, patent law, government or other sectors.

The skills you will learn include:

• how to work independently to identify the aims of a project from the outset;
• teamwork and high-level networking skills;
• how to argue a case and offer constructive criticism;
• analytical and problem-solving skills;
• effective communication of complex information, including presentation skills.

Institute for Academic Development

All postgraduate students can benefit from our Institute for Academic Development (IAD), which provides information, events and courses to help you develop the skills you will need throughout your studies and in the future. IAD events also offer the perfect opportunity to meet and network with other postgraduates from across the University.

Further information is available online: www.ed.ac.uk/iad/postgraduates

For taught postgraduates, IAD provides a popular study-related and transferable skills support programme. It is designed to help you settle into postgraduate life, succeed during your studies and move confidently to the next stage of your career. We offer on-campus and online workshops and one-to-one study skills consultations, plus online advice and learning materials. Workshops and learning resources cover key topics tailored to different academic stages, including getting started with your studies; critical reading, writing and thinking; managing your exams; and planning for and writing up your dissertation.

IAD also provides a comprehensive programme of transferable skills training, resources and support for researchers completing a doctorate. The workshop programme is designed to help you successfully prepare for the various milestones of your PhD, from getting started with your research, to writing up and preparing for the viva. Workshops cover topics such as writing skills, reference management tools, statistics, preparing for conferences, delivering presentations, time and project management, and personal development. IAD also offers online resources and planning tools to help get your research started, plus support for tutoring and demonstrating and research public engagement and communication.

Careers Service

Our Careers Service plays an essential part in your wider student experience at the University, offering world-class careers and personal development guidance and support. We support you to recognise the wealth of possibilities ahead, while at university and after graduation, helping you explore new avenues, tap into your talents and build your employability with confidence and enthusiasm.

The Service provides specialist support for postgraduate students. From exploring career options to making decisions, from CV writing to interview practice, from employed internships to graduate posts and from careers fairs to postgraduate alumni events, we help you prepare for the future.

We sustain and continually develop links with employers from all industries and employment sectors, from the world’s top recruiters to small enterprises based here in Edinburgh. Our employer team provides a programme of opportunities for you to meet employers on campus and virtually, and advertises a wide range of part-time and graduate jobs.

More information:

Careers Service

Connect.ed

Edinburgh encourages its alumni to stay in touch with current students who share an academic background or are interested in a similar career path. Connect.ed is a networking system run by the Careers Service that provides an informal and confidential opportunity for alumni to share their occupational knowledge and experience with current students, who can contact them for advice and guidance on their future career.

Connect.ed

Backing bright ideas

LAUNCH.ed is the University’s award-winning programme for student entrepreneurs. Each year, LAUNCH.ed works with hundreds of students to assess their ideas and develop their business skills and helps many start their businesses.

We have helped Edinburgh students and alumni launch almost 100 new businesses in the last three years, ranging from language tuition to robotics companies.

Applications and fees

We have an online application process for all postgraduate programmes. It’s a straightforward system with full instructions, including details of any supporting documentation you need to submit.

When applying, you will set up an account, which lets you save your application and continue at another time.

Full guidance on our application system is available at: www.ed.ac.uk/postgraduate/applying

General requirements
Our usual entrance requirement for postgraduate study is a UK 2:1 degree, or its international equivalent (see www.ed.ac.uk/international/graduate-entry), in a subject related to your chosen programme. You will also need to meet the University’s language requirements (see below).

Entry requirements for individual programmes can vary, so check the details for the specific programme you wish to apply for. Research applicants with a background not directly related to chemistry may sometimes be considered – your potential supervisor can advise you on this.

References
For applications to taught programmes, the normal requirement is one reference, although an additional reference may be requested in individual cases. For applications to research programmes, two references are required. You should check online for the exact requirements for your intended programme of study.

For general guidance on references, visit: www.ed.ac.uk/postgraduate/references

Deadlines
Some programmes have application deadlines. Please check online for details. For all other programmes, you are encouraged to apply no later than one month before the programme starts to ensure there is sufficient time to process your application. However, earlier application is recommended, particularly where there is a high demand for places or when a visa will be required. Should you wish to submit a late application, please contact us for guidance. There are no formal deadlines for research applicants, but we strongly recommend that students interested in our projects apply as soon as they become available, as places are highly competitive.

English language requirements
Students whose first language is not English must show evidence of one of the qualifications below.

- IELTS Academic: total 6.5 (at least 6.0 in each module).
- TOEFL iBT: total 92 (at least 20 in each module).
- PTE Academic: total 61 (at least 56 in each of the Communicative Skills sections).
- CAE and CPE: total 176 (at least 169 in each module).
- Trinity ISE: ISE II (with distinctions in all four components).

Please note:
- English language requirements can be affected by government policy so please ensure you visit our degree finder to check the latest requirements for your programme: www.ed.ac.uk/postgraduate/degrees
- Your English language certificate must be no more than two years old at the beginning of your programme.
- We also accept recent degree-level study that was taught and assessed in English in a majority English speaking country (as defined by UK Visas & Immigration).

Abbreviations: IELTS – International English Language Testing System; TOEFL iBT – Test of English as a Foreign Language Internet-Based Test; PTE Academic – Pearson Test of English (Academic); CPE – Certificate of Proficiency in English; CAE – Certificate in Advanced English; Trinity ISE – Integrated Skills in English.

www.ed.ac.uk/english-requirements.png

Tuition fees
The following table provides an overview of indicative fee levels for programmes commencing in 2017.

Figures marked * show the fee level set for the 2016/17 academic year. All other figures are indicative of expected fee levels for your studies during the 2017/18 academic year. Because these figures are indicative, it is important you check online before you apply and check the up-to-date fee level that will apply to your specific programme: www.ed.ac.uk/student-funding/tuition-fees/postgraduate

Please note:
- International students starting full-time taught programmes of study lasting more than one year will be charged a fixed annual fee.
- All other students on full-time and part-time programmes of study lasting more than one year should be aware that annual tuition fees are subject to revision and are typically increased by approximately five per cent per annum. This annual increase should be taken into account when you are applying for a programme.
- In addition to tuition fees, your programme may be subject to an application fee and additional costs/programme costs may apply. Please check the latest programme information online.

Tuition fees for EU students
EU students enrolling in the 2017/18 academic year – and possibly the following academic year – will be admitted as Scottish/EU fee status students and are eligible for tuition fee support from the Student Awards Agency for Scotland (SAAS).

Future changes to the fee status of EU students enrolling in the 2017/18 academic year will depend on the timing and terms of the UK’s exit from the European Union and would also require changes to existing UK and Scottish legislation. Current indications are that the UK would leave the EU at the earliest beginning of your programme.

The University is working with the Scottish Government to try to protect the fee status of international students enrolling in the 2017/18 academic year for the duration of their course. However there is a risk that EU students enrolling in the 2017/18 academic year may become subject to international tuition fees for any years of study which follow the UK exit from the EU. In those circumstances we are committed to working with the Government to ameliorate the impact of that change for individual students.

Research council awards

Research councils offer awards to masters, MPhil and PhD students in most of the Schools within the University of Edinburgh. All studentship applications from the research councils must be made through the University, through your School or College office. Awards can be made for both taught and research programmes.

Eligibility and apply for full-time masters programmes. The scholarships, which are funded by the Scottish Funding Council and subject to annual confirmation, cover the full tuition fee. Normal only those UK/EU students who have been resident in the UK for the preceding three years are eligible for a full award. For some awards, candidates who are EU nationals and are resident in the UK may be eligible for a fees-only award. Normally only those UK/EU students who have been resident in the UK for the preceding three years are eligible for a full award. For some awards, candidates who are EU nationals and are resident in the UK may be eligible for a fees-only award.

Loans available for study at the University of Edinburgh

The University of Edinburgh is a participating institution in the following loan programmes, meaning we certify your student status and can help with the application process.

- The Canada Student Loans Program
- Commonwealth Scholarships
- Erasmus+
- Marshall Scholarships (USA)
- Postgraduate Loans (PGL) England
- Postgraduate Loans (SAAS) Scotland and EU
- US Student Loans

Other sources of funding

The following are examples of the many scholarships and support schemes available to students from particular countries who meet certain eligibility criteria.

- Chevening Scholarships
- Commonwealth Scholarships
- Fulbright Scholarships (USA)
- Marshall Scholarships (USA)
- Scottish Saltire Scholarships

Awards are offered by the School of Chemistry, the College of Science & Engineering, the University of Edinburgh, the Scottish, UK and international governments and many funding bodies. Here we list a selection of potential sources of financial support for postgraduate students applying to the School of Chemistry.

Tuition fee discounts

We offer a 10 per cent discount on postgraduate fees for all alumni who have graduated with an undergraduate degree from the University. We also offer a 10 per cent discount for international graduates who spent at least one semester at the University of Edinburgh as a visiting undergraduate: www.ed.ac.uk/student-funding/discounts

Katy Wiedemann, MA Illustration student

The front cover shows the first model of the crystal lattice structure of sodium chloride. This was created in 1883 from 27 balls of wool and 18 steel knitting needles. It was made by Alexander Crum Brown, Chair of Chemistry at the University, as a teaching aid for his lectures.

The items in this illustration are part of the University’s unique Centre for Research Collections, a rich resource for all our students, staff and the wider community.
