“Edinburgh isn’t so much a city, more a way of life … I doubt I’ll ever tire of exploring Edinburgh, on foot or in print.”

Ian Rankin
Best-selling author and alumnus
For more than 400 years the University of Edinburgh has been changing the world. Our staff and students have explored space, won Nobel Prizes and revolutionised surgery. They’ve published era-defining books, run the country, made life-saving breakthroughs and laid the foundations to solve the mysteries of the universe.

Our distinguished alumni include NASA astronaut Piers Sellers, former MI5 Director-General Dame Stella Rimington, Olympians Sir Chris Hoy and Katherine Grainger and historical greats such as philosopher David Hume, suffragist Chrystal Macmillan, who founded the Women’s International League for Peace and Freedom, and physicist and mathematician James Clerk Maxwell.

International collaboration
An internationally renowned centre for academic excellence, we forge world-class collaborations with partners such as the California Institute of Technology (Caltech), Stanford University, the University of Melbourne, Peking University, the University of Delhi and the University of KwaZulu-Natal. As a member of the League of European Research Universities and the Coimbra Group, we link up with leading institutions across Europe.

Linking research and commerce
We were one of the first UK universities to develop commercial links with industry, government and the professions. Edinburgh Research and Innovation (ERI) promotes and commercialises our research excellence and can assist you in taking the first step to market, through collaborative research, licensing technology or consultancy.

Enhancing your career
We are committed to embedding employability in your University experience and have one of the Russell Group’s best track records for graduate employment. From volunteering schemes to our sector-leading Careers Service, we provide you with opportunities to develop your skills, knowledge and experience, giving you an edge in the competitive job market.

TOP 50
We’re consistently ranked one of the top 50 universities in the world. We’re 19th in the 2016/17 QS World University Rankings.

4TH
We’re ranked fourth in the UK for research power, based on research quality and breadth.*

83%
The majority of our research – 83 per cent – is considered world leading or internationally excellent.*

23RD
We’re ranked 23rd in the world for the employability of our graduates.**

£305m
In 2014/15 we won £305 million in competitive research grants.

20
We’re associated with 20 Nobel Prize winners, including physicists Peter Higgs, Charles Barkla and Max Born, medical researcher Peter Doherty and biologist Sir Paul Nurse.

137 NATIONALITIES
Students from two-thirds of the world’s countries study here.

* Research Excellence Framework (REF) 2014
** Latest Emerging Global Employability University Ranking
Taught masters programmes

We offer seven taught MSc programmes, each featuring compulsory and option courses that allow you to tailor your masters degree to your particular interests and career goals.

Programme description

This MSc is taught at the UK’s longest established centre for artificial intelligence, which remains one of the best in the world. Our research draws on neuroscience, cognitive science, linguistics, computer science, mathematics, statistics and psychology to span knowledge representation and reasoning, the study of brain processes and artificial learning systems, computer vision, mobile and assembly robotics, music perception and visualisation. We aim to give you practical knowledge in the design and construction of intelligent systems so you can apply your skills in a variety of career settings.

Programme structure

You will follow two taught semesters of lectures, tutorials, practical work and written assignments, after which you will complete a major individual research project and dissertation.

SPECIALIST AREAS

You will choose a ‘specialist area’ within the programme, which will provide recommendations on which courses to take. The specialist areas are intelligent robotics; agents, knowledge and data; machine learning, and cognitive science; natural language processing; and neural computation and neuinformatics.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:

- Informatics Research Review; Informatics Research Proposal; Introduction to Java Programming (for students who did not already meet the entry requirements)
- Programming with Java; Advanced Java Programming; Advanced Machine Learning
- Introduction to Natural Language Processing; Introduction to Machine Learning; Introduction to Pattern Recognition; Natural Language Understanding
- Robotics: Science and Systems
- Human-Computer Interaction
- Reinforcement learning
- Natural Language Processing
- Natural Language Understanding
- Automatic Speech Recognition; Neural Information Processing
- Topics in Cognitive Modelling
- Advanced Vision; Automated Reasoning; Computational Neurosciences; Human-Computer Interaction; Machine Learning and Pattern Recognition; Neural Computation; Bioinformatics; Accelerated Natural Language Processing; Natural Language Understanding
- Topics in Cognitive Modelling
- More than 40 others

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:

- Advanced Vision; Algorithmic Game Theory; and its Applications; Computer Animation and Visualisation
- Machine Learning and Pattern Recognition; Natural Language Understanding; Robotics: Science and Systems; Human-Computer Interaction
- Reinforcement learning; Accelerated Natural Language Processing; Machine Translation; Semantic Web Systems; Agent Based Systems

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:

- Introduction to Quantum Computing
- Computational Complexity
- Bioinformatics
- Computational Cognitive Modelling
- Computer Networks
- Parallel Programming
- Software Architecture
- Extreme Computing
- Computer Graphics
- Parallel Architectures
- Parallel Programming Languages and Systems
- Software Architecture
- Process and Management
- Algorithmic Game Theory and Its Applications
- Computer Algebra
- Computational Complexity
- Advanced Databases
- Secure Programming
- Formal Verification
- Introduction to Quantum Computing
- More than 40 others

Career opportunities

This programme will give you a deep understanding of the expanding domain of cognitive science through formal study and experiments. It is perfect preparation for a rewarding academic or professional career. The quality and reputation of the University; the School of Informatics and this programme will enhance your standing with many types of employer. Recent graduates are now working as software engineers, analysts and language specialists in companies such as British Telecom and Intel.

Entry requirements

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in mathematics, philosophy, linguistics, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics or psychology, plus experience in computer programming.

English language requirements

Cognitive Science

MSc 1 yr FT (2-3 yrs PT available for UK/EU students)

Programme description

Cognitive Science is a discipline in growing demand, and Edinburgh is a widely recognised leader in this area, with particular strengths in natural language, speech technology, robotics and learning, neural computation and the philosophy of the mind.

You will gain a thorough grounding in neural computation, formal logic, computational and theoretical linguistics, cognitive psychology and natural language processing, and through a vast range of option courses you will develop your own interests in this fascinating field.

Programme structure

You will follow two taught semesters of lectures, tutorials, practical work and written assignments, after which you will complete a major individual research project and dissertation.

SPECIALIST AREAS

You will choose a ‘specialist area’ within the programme, which will provide recommendations on which courses to take. The specialist areas are cognitive science; natural language processing; and neural computation and neuinformatics.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:

- Informatics Research Review; Informatics Research Proposal; Introduction to Java Programming (for students who did not already meet the programme requirements for the taught masters); Dissertation

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:

- Advanced Vision; Automated Reasoning; Computational Neurosciences; Human-Computer Interaction; Machine Learning and Pattern Recognition; Neural Computation; Bioinformatics; Accelerated Natural Language Processing; Natural Language Understanding; Automatic Speech Recognition; Neural Information Processing; Topics in Cognitive Modelling; and more than 40 others

Career opportunities

This programme will give you a deep understanding of the expanding domain of cognitive science through formal study and experiments. Computer Science

MSc 1 yr FT (2-3 yrs PT available for UK/EU students)

Programme description

The MSc will give you specialist knowledge in the design, implementation and use of computing systems ranging from the components of a single processor to computer networks as vast as the internet.

You will gain a solid foundation in theoretical understanding and learn a wide variety of practical techniques that you could use in varied career settings.

Programme structure

You will follow two taught semesters of lectures, tutorials, practical work and written assignments, after which you will complete a major individual research project and dissertation.

SPECIALIST AREAS

You will choose a ‘specialist area’ within the programme, which will provide recommendations on which courses to take. The specialist areas are analytical and scientific databases; computer systems, software engineering and high performance computing; programming languages; cyber security and privacy; and theoretical computer science.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:

- Information Research Review; Information Research Proposal; Introduction to Java Programming (for students who did not already meet the programme requirements for the taught masters); Dissertation

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:

- Machine Learning and Pattern Recognition; Probabilistic Modelling and Reasoning; Extreme Computing; Bioinformatics; Computer Graphics; Computer Architecture; Parallel Programming; Parallel Architectures; Parallel Programming Languages and Systems; Software Architecture; Process and Management; Algorithmic Game Theory and Its Applications; Computer Algebra; Computational Complexity; Advanced Databases; Secure Programming; Formal Verification; Introduction to Quantum Computing; and more than 40 others

Career opportunities

Through this programme you will develop specialist, advanced skills in the development, construction and management of advanced computer systems. You will gain practical experience and a thorough theoretical understanding of the field making you attractive to a wide range of employers or preparing you for further academic study. Recent graduates and current research students employ expertise in software design and use of computing systems; developers and engineers; analysts and applications developers for companies including Cisco, Toshiba, Microsoft, Atos, Sky, SkyScanners, Amazon, BT, Total, Honeywell and JP Morgan Chase.

Entry requirements

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in mathematics, philosophy, linguistics, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics or psychology, plus experience in computer programming. You must have a sufficient mathematical and informatics background for your chosen area of study.

Informatics Postgraduate Opportunities 2017

The University of Edinburgh
Data Science

Programme description
Data science is the study of the computational principles, methods, and systems for extracting and structuring knowledge from data; and the application and use of those principles. Large data sets are now generated by almost every activity in science, society, and commerce – ranging from molecular biology to social media, from sustainable energy to health care.

As an MSc Data Science student you will explore how to efficiently find patterns in these vast streams of data. Many research areas have tackled parts of this problem. Machine learning focuses on finding patterns and making predictions from data; ideas from algorithms and databases are required to build systems that scale to big data streams; and separate research areas have grown around different types of unstructured data such as text, images, sensor data, video, and speech.

Programme structure
You will follow two taught semesters of lectures, tutorials, practical work and written assignments. You will then complete a major individual research project and dissertation.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
- Six courses in data science, including at least one each from the areas of machine learning, statistics and optimization; databases and data management; and applications, plus a dissertation in data science.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
- A range of around 80 option courses is available.

Career opportunities
You will develop specialist, advanced skills in data science methods and their applications. You will gain practical experience and a thorough theoretical understanding of the field, making you attractive to a wide range of employers or preparing you for further academic study.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics, psychology, or another quantitative discipline. You should have experience of computer programming equivalent to an introductory programming course and specific training in algorithms, data structures, object-oriented design, and other computer science concepts.

English language requirements
See page 20.

Fees and funding
For fees see page 20 and for funding information see page 22.

Design Informatics/ Advanced Design Informatics

Programme description
Design Informatics focuses on designing with data. This programme is run in conjunction with Edinburgh College of Art through the newly formed Centre for Design Informatics. You will learn how to build computational systems as well as the principles of design thinking and making. Through case studies of real-life products, you will apply your knowledge in a practical way, developing an understanding of what it takes to create, design and take a product to market. For more information see: www.designinformatics.org

Programme structure
Design Informatics: You will follow two semesters of taught courses, attending lectures, tutorials and group practicals to acquire the theoretical foundation to enable you to engage in independent research. Between May and August you will do a major individual research project on which you will write a dissertation.

Advanced Design Informatics: In the first year, you will follow two semesters of taught courses, attending lectures, tutorials and group practicals to acquire the theoretical foundation to enable you to engage in independent research. In the summer you have a commercial or public sector placement, where you will work on a project that will help you test and reflect on your knowledge and skills. In the second year, taught courses focus on product design, and you will gain experience in leading a group, before completing a dissertation project.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
- Design Informatics: Case Studies in Design Informatics 1; Design with Data, Data Informatics Project; Histories and Futures of Technology; Dissertation.
- Advanced Design Informatics: as shown above for Design Informatics plus Case Studies in Design Informatics 2; Product Development.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
- Wide choice of options including: Computer Graphics; Extreme Computing; Advanced Databases; Human-Computer Interaction; Social and Technical Networks; Accelerated Natural Language Processing; Human Computer Interaction; Robotics; Science and Systems in Informatics; Entrepreneurship and Digital Marketplace.

Career opportunities
This programme will put you at the cutting edge of design technology and technology for design, opening up a host of opportunities in the commercial sector.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics or psychology, plus experience in computer programming.

English language requirements

Informatics

Programme description
Informatics is the study of how natural and artificial systems store, process and communicate information. Edinburgh has a long-standing tradition of world class research and teaching in informatics, a discipline central to a new enlightenment in scholarship and learning, and critical to the future development of science, technology and society. This is our most sought after taught MSc. We offer a wide choice of courses, spanning established disciplines such as cognitive and computer science as well as emerging areas such as bioinformatics. This programme takes full advantage of our expertise in research and teaching, including specialisms unique to Edinburgh.

Programme structure
You will follow two taught semesters of lectures, tutorials, project work and written assignments, after which you will complete a major individual research project and dissertation.

SPECIALIST AREAS
You will choose a ‘specialist area’ within the programme, which will provide recommendations on which courses to take. The specialist areas are analytical and scientific databases; bioinformatics, systems and synthetic biology; cognitive science; computer systems; software engineering and high performance computing; intelligent robotics; agents, knowledge and data; machine learning; natural language processing; neural computation and neuinformatics; music informatics; programming languages; cyber security and privacy; and theoretical computer science.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
- Informatics Research Review; Informatics Research Proposal; Introduction to Java Programming (for students who did not already meet the programming requirements for the taught masters); Dissertation.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
- A range of around 80 option courses is available.

Career opportunities
Our graduates are in demand by potential employers worldwide. Many go on to work in the technology industry as software engineers, IT consultants, programmers and developers, and may work with the software development giant that has become household names. Others go on to further study and research. Recent graduates are now employed as software developers and engineers, programmers, game designers and analysts for companies including Airbus, Citigroup, NCR Corporation, BT and Skyscanner.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics or psychology, plus experience in computer programming. You must have a sufficient mathematical and informatics background for your chosen area of study.

English language requirements
See page 20.

Research at the School of Informatics

We topped the UK rankings for the Research Excellence Framework (REF) 2014, producing more world leading and internationally excellent research in computer science and informatics than any of our competitors. We hope the research you undertake will become part of our future contribution.

The research areas we offer reflect our leadership in the field. Our vast research portfolio is carried out across six institutes: communities of research staff and students with access to specialist facilities and funding. The research degrees we offer follow the same institute grouping, giving you the UK’s greatest choice in core and multidisciplinary areas.

Research options

The most common research degree is the three-year Doctor of Philosophy (PhD) programme. You will embark upon original research under supervision and present the results in a written thesis and oral examination.

The Master of Philosophy (MPhil) requires at least two years of supervised research study. It would usually include taught courses in your first year of study and more independent research in your second year.

The MSc by Research is an opportunity to gain research skills by undertaking independent study related to the School’s ongoing research programme, over a period of one year.

Entry requirements

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in an appropriate subject. Please check the specific entry requirements for your programme online before applying.

EPSRC Centres for Doctoral Training

The University won a share of a £350 million investment in UK science and engineering postgraduate training by the Engineering and Physical Sciences Research Council (EPSRC).

The School of Informatics hosts two Centres for Doctoral Training, one in Data Science and one in Pervasive Parallelism, and is also a partner in the Centre in Robotics and Autonomous Systems in collaboration with Heriot-Watt University.

These four-year (1+3) programmes combine a training year (MSc by Research) with a three-year PhD. For the latest information, see below and: www.ed.ac.uk/informatics/postgraduate/cdts

As a direct result of the Edinburgh team’s research, some of Scotland’s most remote communities are now enjoying superfast broadband for the first time.

Case study: Edinburgh’s research with impact

Enabling rural communities to access high-speed broadband

As befits an institution that operates at the leading edge of technology, the University’s School of Informatics recognises the importance of a fast and reliable broadband connection in this online age. In late 2007, a team of researchers from the School saw that they had the knowledge and resources necessary to make this a reality for people in remote communities, and set about creating the highly successful Tegola Wireless Community Broadband Project.

Project background

The School of Informatics team took up the challenge of deploying wireless networking in remote Scottish communities where high-speed broadband has not been available because the nearest telephone exchange is too far away. The Tegola network demonstrated the suitability of long-distance Wi-Fi technology even for areas like rural Scotland where the terrain can be difficult. To increase the stability and sustainability of the network, the up-to-the-minute resources of the School were used to develop certain engineering measures, and use of solar and wind power for self-powered masts, that would strengthen and protect the network.

Project results

As a direct result of the Edinburgh team’s research, some of Scotland’s most remote communities are now enjoying superfast broadband for the first time. For some it’s their first connection to the online world. Tegola has become a replicable model for community-driven local access network deployments in Scotland. It has also inspired research into tools, systems and techniques to aid communities in deploying and maintaining similar rural networks.

See more online: www.ed.ac.uk/research/impact
Research opportunities

www.ed.ac.uk/pg/858
EPSRC Centre for Doctoral Training in Data Science

www.ed.ac.uk/pg/842
EPSRC Centre for Doctoral Training in Pervasive Parallelism

Large data sets are now generated by almost every activity in science, society and commerce. This EPSRC-sponsored programme tackles the question: how can we efficiently find patterns in these vast streams of data? The applications are limited only by your imagination. Research in the Centre focuses on developing new techniques for analysing, querying, and managing data motivated by cutting edge applications.

Research environment

Many research areas are converging on the problem of data science, including machine learning, databases, data management, statistics, optimization, theoretical computer science, natural language processing, speech processing, and computer vision. Our programme will allow you to specialise and perform advanced research in one of these areas, supervised by one of our 45 world-renowned researchers. Moreover, we believe that key research insights can be gained by working across the boundaries of conventional groupings. The first year of our programme will prepare you by combining research work with coursework that develops your breadth and depth in data science, and that informs your choice of research topic.

Tangible commercial links

You will benefit from interacting with a group of more than 40 leading industrial and public sector partners, including Amazon, Apple, Google, IBM, and Microsoft. The Centre’s partners co-fund studentships, host internships and attend the CDT’s networking events. This will ensure your research is informed by real world case studies and will provide a source of diverse internship opportunities.

Going further

You will be part of a new generation of data scientists, with the technical skills and interdisciplinary awareness to become R&D leaders in this area. We also have outstanding support for entrepreneurial initiatives through Informatics Ventures.

English language requirements

See page 20.

Fees and funding

There are approximately 10 full scholarships, covering tuition fees and living costs, available each year for eligible candidates. For further information see: http://datascience.inf.ed.ac.uk/apply

For fees see page 20 and for funding information see page 22.

EPSRC Centre for Doctoral Training in Robotics & Autonomous Systems

1+3 Programme: MSc by Research followed by PhD - 4 yrs FT

Driven by performance and energy constraints, parallelism is now crucial to all layers of the computing infrastructure, from smartphones to globally distributed systems. The EPSRC-sponsored programme tackles the many urgent interconnected problems raised by parallel systems. How do we design programming languages for such systems? How should the architecture be structured? Which theories, tools and methodologies will allow us to reason about the behaviour of this new hardware and software?

Research environment

Our supervisors offer internationally leading expertise across all aspects of the pervasive parallelism challenge. These include parallel programming, wireless and mobile networking, reasoning about interaction, models of concurrent computation, energy efficient computing, systems architecture, and performance modelling. You will have access to state-of-the-art facilities, from on-chip accelerators including GPU/PS, and multicore CPUs to supercomputer scale systems. The involvement of the Edinburgh Parallel Computing Centre (EPCC), one of Europe’s leading supercomputing centres, provides a globally impressive infrastructure for use in the training of our students.

Tangible commercial links

You will have opportunities to take up internships with leading companies in this area, including ARM, Intel, IBM and Microsoft, and to participate in our industrial engagement programme, exchanging ideas and challenges with our sponsor companies at student conferences, workshops and networking events.

Going further

We intend for our graduates to become the research leaders in both academia and industry, whose work will lead the way into the era of mainstream parallelism. This vision is shared by our industrial partners who have developed their own high performance computing areas. Both industry leading companies and top-tier universities are extremely keen to recruit graduates with these skills.

English language requirements

See page 20.

Fees and funding

Around 10 studentships are available each year for eligible candidates. These studentships cover tuition fees and living costs. For further information see: http://pervasiveparallelism.inf.ed.ac.uk/apply

For fees see page 20 and for funding information see page 22.

EPSRC Centre for Doctoral Training in Robotics & Autonomous Systems

1+3 Programme: MSc by Research followed by PhD - 4 yrs FT

Robots have the potential to revolutionise society and the economy, working for us, besides us, and interacting with us. This EPSRC sponsored programme will produce graduates with the technical skills and industry awareness to create an innovation pipeline from academic research to global markets. The University of Edinburgh and Heriot-Watt University are jointly offering this innovative four-year PhD training programme, which combines a strong general grounding in current theory, methods and techniques with the opportunity for industrialised study and a specialised PhD project.

Research environment

You will have access to state-of-the-art facilities in the Edinburgh Robotarium, a national facility for research into robot interaction, supporting the research of more than 50 world leading investigators from 17 cross-disciplinary research groups. These include human movement control, underwater, land and airborne autonomous vehicles; human robot interaction; bio- and neuro-robotics; and planning and decision making in multirobot scenarios.

Tangible commercial links

Our students participate in our Network of Industry Partners, a unique national facility for research into robot interaction, supporting the research of more than 50 world leading investigators from 17 cross-disciplinary research groups. These include human movement control, underwater, land and airborne autonomous vehicles; human robot interaction; bio- and neuro-robotics; and planning and decision making in multirobot scenarios.

Going further

We aim to produce innovation ready graduates who are skilled in the principles of technical and commercial disruption and who understand how finance and organisation realise new products in start-up, SME and corporate situations. They will become leaders in the globally emerging market for autonomous and robotic systems that reduce risk, reduce cost, increase profit and protect the environment.

English language requirements

See page 20.

Fees and funding

Around 10 studentships are available each year for eligible candidates. These studentships cover tuition fees and living costs. For further information see: www.edinburgh-robotics.org/apply

For fees see page 20 and for funding information see page 22.

ANC: Machine Learning, Computational Neuroscience, Computational Biology

PhD 3 yrs FT (6 yrs PT available for UK/EU students)
MPhil 2 yrs FT (4 yrs PT available for UK/EU students)
MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

The Institute for Adaptive and Neural Computation (ANC) is a world leading institute dedicated to the theoretical and empirical study of adaptive processes in both artificial and biological systems. We are one of the UK’s largest and most prestigious academic teams in these fields. We foster world-class interdisciplinary and collaborative research, bringing together a range of disciplines.

Research environment

Our research falls into three areas: machine learning; computational neuroscience; and computational biology.

In machine learning we develop probabilistic methods that find patterns and structure in data, and apply them to scientific and technological problems. Applications include areas as diverse as astronomy, health sciences and computing.

In computational neuroscience and neuroinformatics we study how the brain processes information, and analyse and interpret data from neuroscience experiments. The focus in the computational biology area is to do computational strategies to store, analyse and model a variety of biological data (from protein measurements and genetics to animal and human behavioural data). If you are interested in these areas you should also consider the CDT programme in Data Science (see page 11).

Career opportunities

The research you’ll undertake at ANC is perfectly suited to a career in academia, where you’ll be able to use your knowledge to advance this important field. Some graduates take their skills into commercial research posts and find success in creating systems that can be used in everyday applications.

Specific entry requirements

ANC researchers come from many different academic backgrounds but most of our research requires prior training in mathematics.

English language requirements

See page 25.

Fees and funding

For fees see page 20 and for funding information see page 22.

"I decided to study at Edinburgh, not just because of the research facilities offered and the University’s prestige as a major educational and scientific development centre, but also because of the great atmosphere in the School of Informatics. Being in an environment that stimulates collaboration and encourages discussion is a great catalyst and a source of inspiration."

Andreea Radulescu, PhD Artificial intelligence

You may also be interested in research areas offered by other Schools, particularly the Schools of Biological Sciences; Physics & Astronomy; or Philosophy, Psychology & Language Sciences.

www.ed.ac.uk/(studying)prospectus-request
CISA: Automated Reasoning, Agents, Data Intensive Research, Knowledge Management

In this information age, the formalised representation of knowledge and automation of reasoning form the basis of the computerised systems that shape our world. At the Centre for Intelligent Systems and their Applications (CISA), we lead the way in research into this vital field, both in facilities and quality of research.

Research environment

You’ll find a wide range of research areas within CISA, from using abstract logic and theorem-proving methods through to systems-oriented investigations. Our current research groups encompass agents and multi-agent systems, knowledge systems, mathematical reasoning, planning and activity management, and software systems and processes.

Intelligent systems are a driving force for change in areas ranging from reasoning on the web to industrial supply chain management. Aided by our links with commercial and government bodies, the research you’ll undertake could shape the future of technology.

Tangible commercial links

CISA includes one of the most innovative collaborations between research and business – our Artificial Intelligence Applications Institute (AII). Through its resources and the engagement of staff and students in consultancy, training and joint projects, we offer solutions to commercial and government clients through the application of newly researched techniques.

Going further

While your research studies are a perfect route to a career in academia, your degree could also take you into the commercial world of applied intelligent systems. Software developers and the users of automated planning systems are among those who rely on the insights of our research. NASA, Hewlett Packard and animation company Pixar are just three of the organisations that have recently employed our graduates.

English language requirements

For fees see page 20 and for funding information see page 22.

ICSA: Computer Architecture, Compilation & Systems Software, Networks & Communication

The Institute for Computing System Architecture (ICSA) will provide you with academic resources and industry links that are among the best in the world. We’re home to the UK’s largest group of PhD researchers in the field, and host a Centre of Excellence in partnership with ARM, the world’s largest microprocessor intellectual property provider. We’re also a member of the European Network of Excellence on High Performance and Embedded Architecture and Compilation.

Research environment

Our students see their degrees as a launch pad for their careers, and many have established themselves as world-class researchers and developers. By joining their ranks, you’ll be able to make your mark on the next generation of technological innovations. Currently, research is focused on the areas of compilers and architectures, parallel computing (see also our CDT programme in Pervasive Parallelism on page 10), wireless networking and processor-automated synthesis by iterative analysis.

Our wireless communication group is particularly strong, and currently working on expanding wireless reach within Scotland. While the scope for research is wide, each area is underpinned by our fundamental aims: to extend understanding of existing systems; to improve current systems; and to develop new architecture and engineering methods.

Encouraging success

You’ll be supported in your research by award-winning academic staff – including four Fellows of the Royal Academy of Engineering. They and other research colleagues have contributed to what is an enviable publications portfolio, featuring some of the most prestigious publications in the field. You’ll graduate with more than an intensive knowledge of your field: you’ll also have established academic and personal links that will last a lifetime.

Career opportunities

Academic and business employers actively recruit ICSA graduates, many of whom are now designing the next generation of products for major software developers, or taking the lead in other entrepreneurial ventures.

English language requirements

For fees see page 20 and for funding information see page 22.
“I knew I wanted to do a PhD in robotics and was very happy to find that Edinburgh had a group specialising in this research, which I subsequently joined. The School of Informatics was truly inspiring and I quickly understood why it had such a renowned reputation.”

Mike Mangan, PhD Robotics graduate 2011
About the School of Informatics

Informatics is the study of natural and engineered computational systems. It encompasses the academic disciplines of computer science, software engineering, artificial intelligence and cognitive science.

Making an impact
We lead the way in an exciting discipline that is central to a new enlightenment in scholarship and learning. Informatics is critical to the development of science, technology, culture and society. As a postgraduate student you will have the opportunity to make your own mark in the area that most interests and excites you.

Inspiring people
At the School of Informatics you can join the world’s brightest students in learning from our distinguished staff, many of whom are world leaders. Our academics include Fellows of the Royal Society, the Royal Society of Edinburgh and the Royal Academy of Engineering. We boast recent winners of the most prestigious awards in the field, including the Herbrand Award, the Blaise Pascal Medal and the Yangtze River Scholar award.

Exciting careers
Graduates from our programmes enjoy career success in a wide array of roles that shape our society, from developing the latest mobile technology to creating intelligent infrastructure. Many go on to work as project managers, researchers, software developers and consultants in the commercial sector (at firms such as Google, Amazon, Skyscanner or Adobe) or take up academic posts, often in Russell Group and US research universities such as MIT and Stanford. Some of our graduates have found success through start-up companies.

Facilities and resources

Our exceptional facilities have been built with the needs of innovative learning, teaching and research in mind. We provide comfortable office space and specialist research and teaching labs.

You’ll be based at the University’s Central Area campus, surrounded by lively venues, leisure facilities and parks and served well by public transport – not to mention the World Heritage attractions of one of the UK’s most beautiful capital cities.

The award-winning Informatics Forum is an international research facility for computing and related areas. It houses more than 400 research staff and students, providing office, meeting and social spaces. It also contains several robotics labs, an instrumented multimedia room, eye-tracking and motion capture systems, and a full recording studio among other research facilities. Its spectacular atrium plays host to many events, from industry showcases and student hackathons to major research conferences. Nearby state-of-the-art teaching facilities include computer and teaching labs with more than 250 machines, 24-hour access to IT facilities for students, and comprehensive support provided by dedicated computing staff.

An entrepreneurial focus
As well as academic importance, we recognise the commercial potential of our research. In recent years, we’ve helped to create more spin-out companies than any other UK institution (as judged by spinout.co.uk). Among our initiatives is Informatics Ventures, set up in 2008 to support globally ambitious software companies in Scotland and nurture a technology cluster to rival Boston, Pittsburgh, Kyoto and Silicon Valley.

Creative space
An exciting new venture for our School is our collaboration with Edinburgh College of Art, backed by the Scottish Funding Council. The Centre for Design Informatics allows the integration of product design with ideas from informatics. Designers work alongside informatics entrepreneurs to help build new products and services, including the next generation of social media tools.

Collections of the University
The University of Edinburgh has one of the world’s great collections, which has been growing ever since its foundation in 1583. Our collections include rare books, archives and manuscripts, art, historical musical instruments and a wide range of museum objects from geological specimens to anatomical models. If laid out end to end, we would have almost 60 kilometres of shelving and storage space devoted to our heritage material, from 1st-century Greek papyrus fragments to new works of sculpture. This is curated by specialist staff across 45 sites and used for our teaching and research by the wider public community.

The Centre for Research Collections in the Main Library is the hub for all our collections, where specialist curators make them available for study, research and pleasure. Postgraduate students are welcome to study original objects and have made many important research discoveries while working on the archives. You will find an incredible range of material in our collections that is available nowhere else in the world.

Our taught courses are consistently ranked excellent in external assessments.
Community

As a student at the School of Informatics, you’ll be studying with the UK’s largest group of informatics researchers, comprising almost 500 students and academic staff.

Working in such a large group of researchers and students opens up opportunities for collaboration and creative interaction. The atmosphere is one of community: we encourage students to mix and share their experiences and many of our subject areas invite a multidisciplinary approach. For example, current research in the School includes Human Communication, Digital Curation, Health Informatics, Synthetic and Systems Biology, and Learning Energy Systems.

In 2013 the School received an Athena SWAN Silver Award, which recognises Informatics as a supportive environment for women in the area of Science, Technology, Engineering, Medicine and Mathematics (STEMM).

Sharing research

In addition to formal teaching, each research institute within the School regularly schedules seminars for all staff and students, where you can hear about current research in the School includes Health Informatics, Synthetic and Systems Biology, and Learning Energy Systems.

Social networking

Informatics students enjoy a lively social life, and can take part in many student-organised activities. The University’s computer society, CompSoc, organises events ranging from games to ice skating and there are regular sports tournaments and tech meet-ups. There is also Hoppers, a social group for women in technology.

The Informatics Forum is a vibrant meeting point for all sorts of groups, from the formal to the very informal – you can even play table tennis in the Forum itself. There are also numerous online resources and meeting points, from the School’s Facebook page to wikis and virtual cafes.

Support

The School’s Student Services team offers a first point of contact to all our taught and research students for help and information to support all aspects of your student life, from admissions and funding to graduations and career opportunities.

Institute for Academic Development

All postgraduate students can benefit from our Institute for Academic Development (IAD), which provides information, events and courses to help you develop the skills you will need throughout your studies and in the future. IAD events also offer the perfect opportunity to meet and network with other postgraduates from the University.

Further information is available online:

www.ed.ac.uk/iad/postgraduates

Employability and graduate attributes

Computers continue to play a vital role in nearly every aspect of everyday living and in a diverse range of sectors – from the entertainment industry to the environment. Some of the most dynamic and lucrative opportunities are available to those who are skilled in computing, software and information systems.

All our postgraduate students have access to an excellent range of services to help you make the most of your time with us, whether you’re looking to enhance your career, pursue research or start your own business.

Start-up assistance

The School of Informatics is particularly supportive of commercialisation and we have a strong track record in developing spin out companies. For those who are entrepreneurially minded, we provide training and mentoring and host special events to help our students and staff attract venture capital funding for their start-ups. Informatics Ventures is a dedicated knowledge exchange programme which aims to foster innovation and entrepreneurship through regular workshops, seminars and other events. For more information see: www.informatics-ventures.com

For taught postgraduates, IAD provides a popular study-related and transferable skills support programme. It is designed to help you settle into postgraduate life, succeed during your studies and move confidently to the next stage of your career. We offer on-campus and online workshops and one-to-one study skills consultations, plus online advice and learning materials.

IAD also provides a comprehensive programme of transferrable skills training, resources and support for researchers completing a doctorate. The workshop programme is designed to help you successfully prepare for the various milestones of your PhD, from getting started with your research, to writing up and preparing for the viva. Workshops cover topics such as writing skills, reference management tools, statistics, preparing for conferences, delivering presentations, time and project management, and personal development. IAD also offers online resources and planning tools to help get your research started, plus support for tutoring and demonstrating and research public engagement and communication.

In addition to a one-to-one study skills consultations, plus online advice and learning materials. IAD also provides a comprehensive programme of transferrable skills training, resources and support for researchers completing a doctorate. The workshop programme is designed to help you successfully prepare for the various milestones of your PhD, from getting started with your research, to writing up and preparing for the viva. Workshops cover topics such as writing skills, reference management tools, statistics, preparing for conferences, delivering presentations, time and project management, and personal development. IAD also offers online resources and planning tools to help get your research started, plus support for tutoring and demonstrating and research public engagement and communication.

Careers Service

Our Careers Service plays an essential part in your wider student experience at the University, offering world-class careers and personal development guidance and support. We support you to recognise the wealth of possibilities ahead, while at university and after graduation, helping you explore new avenues, tap into your talents and build your employability with confidence and enthusiasm.

The Service provides specialist support for postgraduate students. From exploring career options to making decisions, from CV writing to interview practice, from Employ.ed internships to graduate posts and from careers fairs to postgraduate alumni events, we help you prepare for the future.

We sustain and continually develop links with employers from all industries and employment sectors, from the world’s top recruiters to small enterprises based here in Edinburgh. Our employer team provides a programme of opportunities for you to meet employers on-campus and virtually, and advertises a wide range of part-time and graduate jobs.

More information:

www.ed.ac.uk/careers/postgrad

Connect.ed

Edinburgh encourages its alumni to stay in touch with current students who share an academic background or are interested in a similar career path. Connect.ed is a networking system run by the Careers Service that provides an informal and confidential opportunity for alumni to share their occupational knowledge and experience with current students, who can contact them for advice and guidance on their future career.

More information:

www.ed.ac.uk/careers/connected

Backing bright ideas

LAUNCH.ed is the University’s award winning programme for student entrepreneurs. Each year, LAUNCH.ed works with hundreds of students to assess their ideas and develop their business skills and helps many start their businesses. We have helped Edinburgh students and alumni launch almost 100 new businesses in the last three years, ranging from language tuition to robotics companies.

More information:

www.LAUNCH.ed.ac.uk
Applications and fees

We have an online application process for all postgraduate programmes. It’s a straightforward system with full instructions, including details of any supporting documentation you need to submit.

When applying, you will set up an account, which lets you save your application and continue at another time. Full guidance on our application system is available at: www.ed.ac.uk/postgraduate/applying

General requirements
Our usual entrance requirement for postgraduate study is a UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry). This will typically be in an area of informatics, such as artificial intelligence, cognitive science or computer science. You may also be considered if your degree is in one of the following areas: engineering, linguistics, mathematics, philosophy, physics or psychology. You will need to have experience in computer programming.

You will need to meet the University’s language requirements (see below).

Entry requirements for individual programmes can vary, so check the details for the specific programme you wish to apply for online: www.ed.ac.uk/postgraduatedegrees

References
For applications to taught programmes, the normal requirement is one reference, although an additional reference may be requested in individual cases. For applications to research programmes, two references are required. You should check the entry online for exact requirements for your intended programme of study. For general guidance on references, visit: www.ed.ac.uk/postgraduatedegrees/references

Deadlines
Taught MSc programmes
Some programmes have application deadlines. Please check the individual programme entry online for details. For all other programmes, you are encouraged to apply no later than one month prior to the end of your programme to ensure there is sufficient time to process your application. However, earlier application is recommended, particularly where there is a high demand for places or when a visa will be required. Should you wish to submit a late application, please contact us for guidance. If you are applying for funding, in most cases you will need an offer to study with us before you can make your funding application.

Research programmes
Our admissions process for research students is organised into two rounds, which are aligned with the timing of the main funding decisions. For full consideration for all PhD scholarships, including those available to international and EU students, you should apply for admission by mid-December. The second deadline is the end of March, connected to funding decisions mostly affecting UK students. It is possible for admissions decisions to be made at other times of the year, especially if you have your own or external sources of funding.

English language requirements
Students whose first language is not English must show evidence of one of the qualifications below:

• IELTS Academic: total 6.5 (at least 6.0 in each module).
• TOEFL-iBT: total 92 (at least 20 in each module).
• PTE (A): total 61 (at least 56 in each of the Communicative Skills sections).
• CAE and CPE: total 176 (at least 169 in each module).
• Trinity ISE: ISE I (with distinctions in all four components).

Please note:
• English language requirements can be affected by government policy so please ensure you visit our degree finder to check the latest requirements for your programme: www.ed.ac.uk/postgraduatedegrees
• Your English language certificate must be no more than two years old at the beginning of your programme.
• We also accept recent degree-level study that was taught and assessed in English in a majority English speaking country (as defined by UK Visas & Immigration).

Abbreviations: IELTS – International English Language Testing System; TOEFL-iBT – Test of English as a Foreign Language Internet-Based Test; PTE(A) – Pearson Test of English (Academic); CPE – Certificate of Proficiency in English; CAE – Certificate in Advanced English; Trinity ISE – Integrated Skills in English.

www.ed.ac.uk/english-requirements

Tuition fees
The following table provides an overview of indicative fee levels for programmes commencing in 2017.

Figures marked * show the fee level set for the 2016/17 academic year. All other figures are indicative of expected fee levels for your studies during the 2017/18 academic year. Because these figures are indicative, it is important you check online before you apply and check the up-to-date fee level that will apply to your specific programme: www.ed.ac.uk/student-funding/tuition-fees/postgraduate

Please note:
• International students starting full-time taught programmes of study lasting more than one year will be charged a fixed annual fee.
• All other students on full-time and part-time programmes of study lasting more than one year should be aware that annual tuition fees are subject to revision and are typically increased by approximately five per cent per annum. This annual increase should be taken into account when you are applying for a programme.
• In addition to tuition fees, your programme may be subject to an application fee and additional costs. Please check the latest programme information online.

Tuition fees for EU students
EU students enrolling in the 2017/18 academic year will depend on the timing and terms of the UK’s exit from the European Union and would also require changes to existing UK and Scottish legislation. Current indications are that the UK would leave the EU at the earliest in 2019 so any changes would not take effect before the academic year 2019/20.

The University is working with the Scottish Government to try to protect the fee status of EU students enrolling in the 2017/18 academic year for the duration of their course. However there is a risk that EU students enrolling in the 2017/18 academic year may become subject to international tuition fees for any years of study which follow the UK exit from the EU. In those circumstances we are committed to working with the Government to ameliorate the impact of that change for individual students.

The Scottish Government has already confirmed that the fee status of existing students and students enrolling in the 2016/17 academic year will remain unchanged for the duration of their studies.

For UK/EU students

Funding

A large number of scholarships, loans and other funding schemes are available for your postgraduate studies. It is only possible to show a small selection in print. To see the full range, please visit: www.ed.ac.uk/student-funding/postgraduate.

Scholarships at the University of Edinburgh
• Beit Trust
  Beit Trust and the University of Edinburgh Scholarships jointly fund postgraduate students from Malawi, Zambia and Zimbabwe to undertake a masters: www.beittrust.org.uk
• Edinburgh Global Research Scholarships
  These scholarships are designed to attract high-quality international research students to the University: www.ed.ac.uk/student-funding/global-research
• Edinburgh Syrian Postgraduate Scholarships
  A number of scholarships are available to postgraduate students from Syria studying a full-time one year masters: www.ed.ac.uk/student-funding/postgraduate/syria
• EPSRC Centre for Doctoral Training Studentships
  Combined MSc/PhD programmes in our EPSRC Centres for Doctoral Training offer a number of fully-funded places for eligible students: www.ed.ac.uk/informatics/postgraduate/fees/research-scholarships
• Google European Doctoral Fellowship
  Google runs an international competition for these scholarships. Successful applicants receive full tuition fees, a stipend and research expenses: https://research.google.com/university/relations/doctoral_fellowships_europe.html
• Julius Nyerere Masters Scholarships (Tanzania)
  One scholarship is available to citizens of Tanzania who are normally resident in Tanzania who are accepted on a full-time masters programme: www.ed.ac.uk/student-funding/jinyere
• Microsoft Research European PhD Scholarships
  Microsoft Research runs an international competition for these scholarships, which are available to students from Europe, the Middle East and Africa: http://research.microsoft.com/en-us/collaboration/global/apply-europe.aspx
• School of Informatics Masters Scholarships
  A number of scholarships are available for masters study to students who are accepted for admission on a full-time eligible programme: www.ed.ac.uk/informatics/postgraduate/fees/msc-scholarship
• School of Informatics Scholarships
  A number of scholarships are available each year to new postgraduate research students: www.ed.ac.uk/informatics/postgraduate/fees

The University of Edinburgh
• PhD Scholarships
  A number of scholarships, open to UK, EU and international PhD students: www.ed.ac.uk/student-funding/development

Research council awards
Research councils offer awards to masters, MPhil and PhD students in most of the Schools within the University of Edinburgh. All studentships applications to the research councils must be made through the University, through your School or college office. Awards can be made for both taught and research programmes.

Normally only those UK/EU students who have been resident in the UK for the preceding three years are eligible for a full award. For some awards, candidates who are EU nationals and are resident in the UK may be eligible for a fees only award. www.ed.ac.uk/student-funding/research-councils

The University also offers a number of scholarships in partnership with the following overseas government agencies:
• Chile
  National Commission for Scientific and Technological Research (CONICYT): www.conicyt.cl
• Colombia
  Administrative Department of Science, Technology and Innovation (Colciencias): www.colciencias.gov.co
• Ecuador
  Secretaria Nacional de Educacion Superior, Ciencia y Tecnologia (SENESCYT): www.eduacacionsuperior.gob.ec
• Iraq
  Ministry of Higher Education and Scientific Research: www.iraqculturalattache.org.uk
• Mexico
  National Council of Science and Technology of the United Mexican States (CONACYT): www.conacyt.mx
• Tanzania
  Ministry of Education and Vocational Training Studentships (Tanzania): www.tanzania-dofe.fundacionmx
• US Students
  The University is eligible to certify loan applications for US loan students. Full details on how to apply can be found online: www.ed.ac.uk/student-funding/us-loans

Research programmes
• Masters by Research programmes
  MSc scholarship

Loans available for study at the University of Edinburgh
The University of Edinburgh is a participating institution in the following loans programmes, meaning we certify your student status and can help with the application process.
• The Canada Student Loans Program
  The University is eligible to certify Canadian student loan applications: www.ed.ac.uk/student-funding/canadian-loans
• Erasmus+
  An Erasmus+ loan supports students accepted for a masters programme in an Erasmus+ country. For more information: http://ec.europa.eu/education/opportunities/higher-education/mastersloans_en.htm
• Marshall Scholarships (USA)
  Marshall Scholarships (USA) are available to outstanding US students wishing to study at any UK university for at least two years: www.marshallscholarship.org
• Scotland’s Saltire Scholarships
  A number of scholarships open to students who are citizens permanently and ordinarily resident in Canada, China, India, Pakistan and the USA for one year of masters study: www.ed.ac.uk/student-funding/saltire

Other sources of funding
The following are examples of the many scholarships and support schemes available to students from particular countries who meet certain eligibility criteria.
• Chevening Scholarships
  A number of full and part funding scholarships are available to one-year masters students: www.chevening.org
• Commonwealth Scholarships
  Scholarships open to UK graduate students in any subject wishing to study in the UK: www.dfid.gov.uk/cscuk
• Fulbright Scholarships (USA)
  Scholarships open to US graduate students in any subject wishing to study in the UK: www.fulbright.org
• Marshall Scholarships (USA)
  Scholarships open to outstanding US students wishing to study at any UK university for at least two years: www.marshallscholarship.org
• Scotland’s Saltire Scholarships
  A number of scholarships open to students who are citizens permanently and ordinarily resident in Canada, China, India, Pakistan and the USA for one year of masters study: www.ed.ac.uk/student-funding/saltire

“...The Scottish Government’s initiative to attract international students from Canada, China, India and the US through the Saltire Scholarship Scheme, as well as the University of Edinburgh’s support for international students, has helped provide me with an opportunity that I would never have conceived of prior to starting my studies at Edinburgh.”

Robert Stain, MSc High Performance Computing, Scotland’s Saltire Scholarship
Informatics teaching, learning and research takes place in two buildings based at the University’s Central Area campus, a stone’s throw from city attractions and University amenities, such as the Main Library and the Centre for Sport and Exercise.
