

THE UNIVERSITY *of* EDINBURGH
COLLEGE OF SCIENCE
AND ENGINEERING

Academics Unplugged

Bite-sized research, in twenty minutes

An opportunity for researchers to introduce their work to staff and students from across the College.

Jason Love
Professor of
Molecular Inorganic Chemistry

Urban gold mining: using chemistry to recover resources

1.10pm, 1 December 2016

Daniel Rutherford Building, Lecture Theatre 1 (G.27)

There are over a thousand researchers working across the King's Buildings campus. And yet, much of the time the rest of us are unaware of their work, how it relates to other research, or how it may meet the challenges in contemporary society.

The talks will take place between 1.10 and 1.50pm: each takes the form of a twenty-minute presentation, followed by the opportunity for the audience to discuss the subject further with the speaker.

Each talk will end with a link to further information on the speaker's area of interest, so that you can delve into the subject in more detail.
