

Using the Accessibility settings for the AV loans web booking service

By default the web booking service will appear as black text on a white background. You can change this to suit your needs either by using predefined templates or setting your own selection of colours.

Begin by going into the **Menu** which will open the alternative list of options. Click on **ACCESSIBILITY**

This will open a list of keyboard shortcuts for your information (or instructions on using voice control if on mobile). Scroll to the bottom of this page to find the **Appearance** settings.

Selecting a preset from the drop-down list will show how the colours change in the preview area below. Alternatively, clicking on each of the colour samplers will allow you to adjust them individually for a more fine-tuned setup. Refresh the page to see how your changes will look.

If you need to return to the original look at any time, select the **Default** preset from the list and refresh the page.

The three available presets are shown below. Changes to colour settings will be applied to both the mobile and desktop version regardless of where they are made.
