RESPIRE Data Management Plan (DMP): Template (adapted from the University of Edinburgh)

Name:	Sudipto Roy
Modified by:	Tathagata Bhattacharjee
Project Title:	Care-seeking practices of and barriers to care-seeking for pneumonia in children aged less than five years in tribal and non-tribal rural areas of Pune district, India. PhD study
Institute:	KEM Hospital Research Centre, Pune, India
Start Date:	01 April 2018
End Date:	31 March 2021
DMP version number and date:	V1, dated 29 Sep 2020

Responsibilities & Resource (applicable across the section below)

 Who will be involved in the data management of this research?

The roles of human resources involved are:
1. Field Research Assistants (FRA) for collecting data from the field
2. Data Entry Operators (DEO) for transferring the paper form data into electronic format
3. PhD student for overall coordination and management of the study
4. Data Manager (DM) for electronic data management
5. PhD student for overall responsibility of data generation, safety, storage and data use

Other resources utilised for data management processes during this study include the following:
1. Computers (desktop and laptops) used for data entry work.
2. External hard drives for backup during the data entry work.
3. Backup servers for storage of data at Vadu site, KEMHRC and cloud services.

At the end of this project data will be submitted to Edinburgh DataShare (https://datashare.is.ed.ac.uk/) for sharing data in public domain and for long term preservation on DataVault (https://www.ed.ac.uk/information-services/research-support/research-data-service/after/datavault).

1. Data Capture

www.ed.ac.uk/usher/respire
@RESPIREGlobal
RESPIRE@ed.ac.uk

What data will be generated or reused in this research?

The following data will be generated in this study.

- **Questionnaire:** Quantitative; stored in csv format. This includes study participants' demographic and heath data relevant to the study objectives.

To determine care-seeking behaviour and influencing factors and barriers, information will be obtained on the course of action for treatment taken by care-givers when a child aged between two to 59 months developed signs and symptoms of pneumonia.

A detailed survey questionnaire will be administered to the primary care-giver which will include data on specific signs and symptoms related to pneumonia and perceived severity, along with other related clinical features and duration and progress of clinical features.

The above-mentioned data is being collected in hard copy forms and will be destroyed after a minimum five years from the protocol defined end of study point. Fully anonymized (without any identifiers) soft copy data are being stored by KEMHRC as per its data sharing and archiving policy which is in line with the guidelines set by the national (Indian) data access and sharing policy.

How much data will be generated?

A total of 800 records will be generated for the data stated in the section above. Overall size of the soft copy data will be approximately less than 2 Gigabytes.

2. Data Management

How will the data be documented to ensure it can be understood?

The data as stated in section above is being collected using a structured questionnaire. The questionnaire has instructions with pre-question, the literal question and post-question information, where applicable, sections. The questionnaire (blank template) both in soft (pdf) and hard copy is stored at site along with the soft copy dataset and hard copy completed forms respectively for any future references.

All hard copy data with respect to this study and its documentation will be kept for a minimum of five years from the protocol defined end of study point.

Data quality control will be done using MS-Excel and SPSS programmes.

A data Documentation Initiative conforming to international standard for describing the questionnaire is planned. This will add detailed and quality metadata for the datasets

www.ed.ac.uk/usher/respire
@RESPIREGlobal
RESPIRE@ed.ac.uk

generated in this study. Metadata documentation is planned to be done for study datasets. The plan for this data documentation includes complete study documentation along with all the processes and standards incorporated and adhered to along with the other data metrics as will be identified during the process. A detailed variable level metadata will be created for easy end-user understanding at any point of time.

Where will the data be stored and backed-up?

Data will be stored/preserved/shared as per the below listed principles:

1. All data generated in relevant retrospection, joint studies and partnered projects under RESPIRE may have a cleaned and anonymized subset copy on the UoE data repository, named as DataShare. Access to such data on DataShare will be public.
2. A copy of all data that is uploaded on DataShare is retained by KEMHRC on an "as-it-is" basis along with a master mapping record for identifiers. This is needed for regulatory purposes. The copy retained at KEMHRC will not be uploaded on any other public access data repository unless agreed by both the UoE and KEMHRC.
3. All data generated in relevant retrospection, joint studies and partnered projects under RESPIRE may be put in Edinburgh DataVault, for long term preservation, however the copies on DataVault must be anonymized with master mapping data for the identifiers in custody of KEMHRC. Dataset on DataVault must have controlled access with a definite lifetime assigned as per institution's policy.
4. For all datasets pushed on to DataVault, a copy must be retained by KEMHRC with assigned lifetime as per institution's policy (5-8 years for KEMHRC) along with the master mapping data for identifiers. The location of storage and related services will solely be the responsibility of KEMHRC.
5. All in-process data, i.e., active research data, that may need sharing with group members remotely may be put on UoE's DataStore (https://www.ed.ac.uk/information-services/research-support/research-data-service/during/data-storage). These types of data sharing will be guided by the MoU and data sharing agreements of the collaborating institutions.
6. KEMHRC's document server may also be used for all in-process, i.e., active research data that needs sharing whilst working collaboratively within office premise local network or VPN.
7. All data on either DataShare, DataStore or on DataVault, the ownership lies with KEMHRC with grant of custody given to UoE under terms and conditions of MoU.

Based on the above principles, data generated for this study is/will be stored as described here:
1. The data storages of KEMHRC includes the following and all data stored are catalogued using standard methods and are considered as "enclaved", meaning that no direct access would be given. Probable users can search from the catalogue and raise a request for copy of the data.
2. KEMHRC data storage server is located in Pune office. This storage server is a well configured secured storage for all project data and catalogued and accessible over local network only.

www.ed.ac.uk/usher/respire
@RESPIREGlobal
RESPIRE@ed.ac.uk

These are not publicly available resources and are accessible from within the network in office premises.

3. The KEMHRC data storage server is also configured to serve as a document server and all in-process, i.e. active research data, that needs sharing with group members can be used for access from with the local network or over VPN.

4. KEMHRC data storage server located at Vadu office. This is a temporary storage server for storing in-process data and does not store the final archival versions and accessible over local network only. These are not publicly available resources and are accessible from within the network in office premises.

5. A complete copy of raw data permanently archived in the above-mentioned KEMHRC data storages and catalogued for a minimum period of eight years in order to comply with the KEMHRC data policy, IT laws of India and funder/sponsor requirements.

6. In-process data, i.e. active research data, if needed, may be put on UoE's DataStore (https://www.ed.ac.uk/information-services/research-support/research-data-service/during/data-storage) in cases of distributed teams to share files anywhere and with anyone with study groups.

3. Integrity

How will you quality assure your data?

Quality checks of the questionnaire data will be done at three levels.

1. FRAs involved in data collection will themselves check the collected data for completeness and logical checks.
2. Thereafter, once the questionnaires are received at office, the PhD student will perform quality checks. Data showing issues will be sent back to the field through reassigning those to the respective FRA.
3. Finally, once data is entered, the PhD student will perform quality checks using MS Excel and SPSS programmes.

4. Confidentiality

How will you manage any ethical and Intellectual Property Rights issues?

The PhD student and study site staff involved with this study conform with the requirements of the General Data Protection Regulation (GDPR) 2018 with regard to the collection, storage, processing and disclosure of personal information and uphold the Act's core principles. Access to collated participant data is restricted to individuals from the research team, treating physicians of the participants, representatives of the sponsor(s) and representatives of regulatory authorities.

www.ed.ac.uk/usher/respire
@RESPIREGlobal
RESPIRE@ed.ac.uk

Computers used to collate the data and have limited access measures via usernames and passwords.

All identifying information that is collected about the participant (such as name, age, sex, address, contact information) during the course of the research will be kept confidential and secured. Published results will not contain any personal data that could allow identification of individual participants.

The data of each study participant will be identified with the help of a unique identifier and it will be completely anonymized and scrambled before sharing. The details of the unique identifier will be held with the research team. There will be no such information in the shared data which will disclose the identity of the study participant. Standard and recommended security measures and confidentiality with data sharing agreements will be in place with access control at every stage and audit trails maintained for all access and changes in data.

5. Retention and Preservation

Which data do you plan to keep and for how long?

Data will be retained and preserved as per the principles stated in section above in Data Management.

All hard copy data (filled forms), which includes identifiable information and related documentation is preserved at KEMHRC Vadu for up to a period of five years from the protocol defined end of study point. After the elapse of five years, hard copy data will be destroyed as per KEMHRC guidelines and/or specific contract clause with the sponsor(s), if any or under prevailing law of the land (India).

Soft copy of the raw data is uploaded on secured KEMHRC data storages with limited access to KEMHRC data administrators only. Data on KEMHRC data storages are catalogued. Data is "enclaved" in the storages, meaning it is findable through the catalogues but no direct access is given. Data is categorized and some categories of data, for example the identifiers, which are for internal reference only will not be made accessible to non-KEMHRC entities. The categories of data meant for public access either open or controlled will not be on these storages.

Any access needed is to be directed through the data administrator after due approvals. As per KEMHRC policy, this soft copy of data will be retained on the storage server(s) for a minimum period of eight years with no upper limit defined.

An anonymised copy of the study data will be backed up on the UoE's DataVault (https://www.ed.ac.uk/information-services/research-support/research-data-service/after/datavault) for long term preservation. The preservation details are articulated under the next heading.

How will the data be preserved?

www.ed.ac.uk/usher/respire
@RESPIREGlobal
RESPIRE@ed.ac.uk

Based on the principles listed in section 2, data generated for this study will be preserved at the end of study as described here:

1. Soft copies of all data collected in this study will be anonymised with identifier mapping master.

2. Soft copies of all data will be preserved by KEMHRC along with the mapping master which will be retained as per data policy of KEMHRC (The KEMHRC data policy is not made available as public accessible resource as on date; however, it is sharable with collaborators on approvals from the trust members).

3. Data will be preserved on University of Edinburgh's DataVault (https://www.ed.ac.uk/information-services/research-support/research-data-service/after/datavault) for a longer period as defined by the University's data policy.

4. KEMHRC will preserve data on its data backup servers located in KEMHRC Pune office and also on commercially purchased data archival cloud space (https://aws.amazon.com/glacier/).

5. All soft copies of data including identifiable information and related documentation will be preserved on KEMHRC storages and anonymised copies on UoE's DataVault (https://www.ed.ac.uk/information-services/research-support/research-data-service/after/datavault).

A complete copy of the anonymised data validating the results will be preserved for long term in the above-mentioned data storages and catalogued for a minimum period of eight years in order to comply with the KEMHRC data policy, IT laws of India and funder/sponsor requirements.

6. Sharing and Publication

Which data will be shared and how?

Data sharing principles encourage ethical commitments of data generated from the public and must benefit the public by sharing for open access research opportunities. KEMHRC holds this principle to its core and provides data from its studies and projects for sharing after due processes of cleaning, anonymisation and masking confidential information wherever applicable.

For this study, KEMHRC would be submitting anonymised data for public access on University of Edinburgh's DataShare (https://datashare.is.ed.ac.uk/). Data on DataShare must follow the principles of findability, accessibility, interoperability, and reusability (FAIR) and the submitted dataset must have a Digital Object Identifier (DOI) assigned.

As per KEMHRC policy, data on KEMHRC server will be stored for a minimum eight years with no upper limit defined. A similar copy of the data would be retained by KEMHRC for adherence

www.ed.ac.uk/usher/respire
@RESPIREGlobal
RESPIRE@ed.ac.uk

to local IT laws. Any derived or calculated or other form of data can also be shared on DataShare.

Are any restrictions on data sharing required?

There are a few restrictions and procedures for compliance to KEMHRC data policy and local IT laws:

(1) Identities of study participants cannot be shared or stored on servers outside the boundaries of India

(2) Only anonymised data can be shared on public domain. The degree to which anonymisation is done must be clearly understood and documented.

(3) A copy of all data stored on servers outside India must have a copy within Indian territory and must be made available to any law enforcing or regulatory agency on demand

(4) The law enforcement and regulatory authorities will have full access to the data as per the rules and regulations.

Not all of the above is law yet but compliance is solicited. It is expected that any researcher using this dataset for any type of publication or conference paper must cite this dataset by referencing the DOI.
