1. What is it?

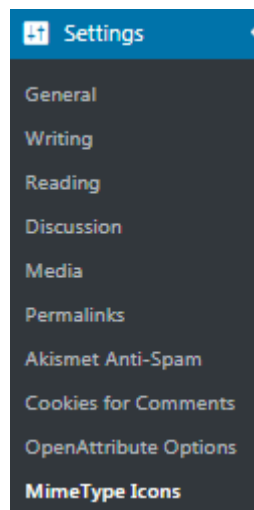

MimeType Link Icons is a plugin that adds an icon when you embed a file into a WordPress post.

2. What does it do?

This plugin will enable an icon to appear next to a link that is embedded into a post so that users can easily recognize the nature of the file.

3. How does it work?

To find the plugin, go to Settings>MimeType Icons. There you will find a list of options enabling you to activate and modify your icon appearance.

General Settings: here you will find options regarding image size, image type and where the image is displayed. Pick your preference from the scroll down menus.

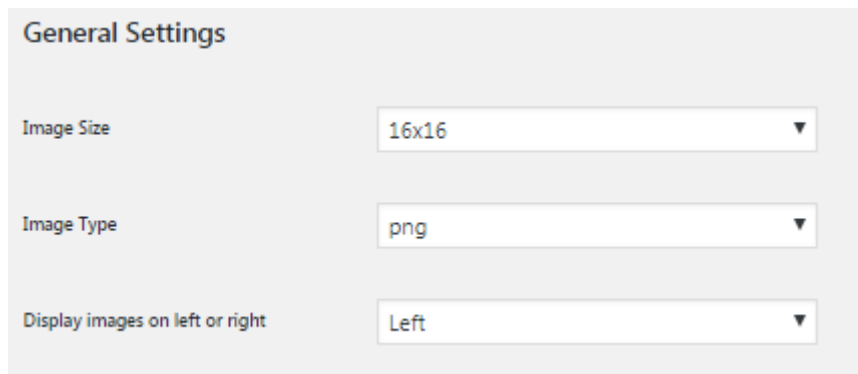

Image Settings: tick the box corresponding to the format you wish to have represented by with an icon.

Add images to cls uploads/files		<input type="checkbox"/>	Add images to pdf uploads/files		<input checked="" type="checkbox"/>
Add images to csv uploads/files		<input type="checkbox"/>	Add images to png uploads/files		<input type="checkbox"/>
Add images to deb uploads/files		<input type="checkbox"/>	Add images to pps uploads/files		<input type="checkbox"/>
Add images to djvu uploads/files		<input type="checkbox"/>	Add images to ppsx uploads/files		<input type="checkbox"/>
Add images to dmg uploads/files		<input type="checkbox"/>	Add images to ppt uploads/files		<input type="checkbox"/>
Add images to doc uploads/files		<input type="checkbox"/>	Add images to pptx uploads/files		<input type="checkbox"/>
Add images to docx uploads/files		<input type="checkbox"/>	Add images to psd uploads/files		<input type="checkbox"/>
Add images to dwf uploads/files		<input type="checkbox"/>	Add images to pub uploads/files		<input type="checkbox"/>
Add images to dwg uploads/files		<input type="checkbox"/>	Add images to py uploads/files		<input type="checkbox"/>
Add images to eps uploads/files		<input type="checkbox"/>	Add images to qt uploads/files		<input type="checkbox"/>
Add images to epub uploads/files		<input type="checkbox"/>	Add images to ra uploads/files		<input type="checkbox"/>
Add images to exe uploads/files		<input type="checkbox"/>	Add images to ram uploads/files		<input type="checkbox"/>

Advanced Settings: these settings offer you the possibility to show file size or enable classnames...

Advanced Settings

Enable/Disable classnames?

Tick this box to have one or more *classname(s)* that will disable the mime type links (ie: around an image or caption).

You can change the *classname(s)* by editing the field below. If you want to exclude several classnames, separate them with a comma (,).

Show File Size?

Display the *file size* of the attachment/linked file. File size rounding precision: decimals
sizes less than 1kB will always have 0 decimals

Retrieving the file sizes of (external) files can be slow. If the file sizes of the files you link to do not change very often, you may want to cache the results. This will result in faster page loading for most end-users of your website.

Cache retrieved file sizes. Amount of time to cache retrieved file sizes: hours

Enable Asynchronous Replacement?

Some themes or plugins may conflict with this plugin. If you find you are having trouble you can switch on asynchronous replacement which (instead of PHP) uses JavaScript to find your links.

Tick box to enable *asynchronous replacement*. Tick box to enable *asynchronous debug mode*.

Remember to Save Changes when you are happy with your modifications.
