“Edinburgh isn’t so much a city, more a way of life … I doubt I’ll ever tire of exploring Edinburgh, on foot or in print.”

Ian Rankin
Best-selling author and alumnus
Influencing the world since 1583

For more than 400 years the University of Edinburgh has been changing the world. Our staff and students have explored space, won Nobel Prizes and revolutionised surgery. They’ve published era-defining books, run the country, made life-saving breakthroughs and laid the foundations to solve the mysteries of the universe.

Our distinguished alumni include NASA astronaut Piers Sellers, former MI5 Director-General Dame Stella Rimington, Olympians Sir Chris Hoy and Katherine Grainger and historical greats such as philosopher David Hume, suffragist Chrystal Macmillan, who founded the Women’s International League for Peace and Freedom, and physicist and mathematician James Clerk Maxwell.

**International collaboration**
An internationally renowned centre for academic excellence, we forge world-class collaborations with partners such as the California Institute of Technology (Caltech), Stanford University, the University of Melbourne, Peking University, the University of Delhi and the University of KwaZulu-Natal. As a member of the League of European Research Universities and the Coimbra Group, we link up with leading institutions across Europe.

**Linking research and commerce**
We were one of the first UK universities to develop commercial links with industry, government and the professions. Edinburgh Innovations promotes and commercialises our research excellence and can assist you in taking the first step to market, through collaborative research, licensing technology or consultancy.

**Enhancing your career**
We are committed to embedding employability in your University experience and have an impressive track record for graduate employment. From volunteering schemes to our sector-leading careers service, we provide you with opportunities to develop your skills, knowledge and experience, giving you an edge in the competitive job market.

**TOP 50**
We’re consistently ranked one of the top 50 universities in the world. We’re 18th in the 2019 QS World University Rankings.

**4TH**
We’re ranked fourth in the UK for research power, based on the 2014 Research Excellence Framework.*

**83%**
The majority of our research – 83 per cent – is considered world leading or internationally excellent.*

**TOP 100**
We are ranked in the top 10 in the UK and in the top 100 in the world for the employability of our graduates.†

**£373m**
In 2016/17 we won £373 million in competitive research grants.

**24**
We are associated with 24 Nobel Prize winners.

**13TH**
We’re ranked 13th in the world’s most international universities.‡ Since 2010, we have taught students from 82 per cent of the world’s countries.
Taught masters programmes

Our taught master of science (MSc) programmes consist of two semesters of taught courses, followed by a research project and a dissertation.

Advanced Chemical Engineering

MSc 1 yr FT

Programme description
You will learn current chemical engineering developments through taught modules, workshops, an MSc research dissertation, and supporting activities delivered by key experts in the field. The programme develops from fundamental topics (including modern approaches to understanding properties of the systems at a molecular scale) and advanced numerical methods, to the actual processes, with an emphasis on energy efficiency. Your dissertation will require you to put your skills into practice, by applying them to actual chemical engineering problems.

Programme structure
Compulsory courses emphasise modern computational techniques and research methods, complemented by management and economics. A wide spectrum of option courses allows you to personalise your MSc.

SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:

Introduction to Research Methods I; Numerical Methods for Chemical Engineers; Molecular Thermodynamics; plus up to two options from: Chemical Reaction Engineering; Fire Science and Fire Dynamics; Engineering Project Management; Computational Fluid Dynamics; Group Design Project (Power Station with Carbon Capture and Storage).

SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:

Introduction to Research Methods II; plus five or six options from: Polymer Science and Engineering; Nanomaterials in Chemical and Biomedical Engineering; Nanotechnology; Oil and Gas Systems Engineering; Supply Chain Management; Modern Economic Issues in Industry; Technology and Innovation Management; Gas Separation Using Membranes; Separation Processes; Separation Processes for Capture; Particle Technology Fundamentals and Industrial Applications; Industrial Ecology; Electrochemical Engineering.

Career opportunities
Edinburgh is the UK’s engineering powerhouse. Our graduates enjoy career opportunities in the oil and gas, pharmaceutical, food and drink, consumer products, banking and consulting industries. Recent employers include BP, P&G, ExxonMobil, Mondelēz International, Emerson Automation, Bepol, Avery Dennison, Metro Financial, BillerudKorsnäs UK, Doosan Babcock, Atkins, Kazagronettrans (Kazakhstan), Safetec, Xodus Group, GSK, Diageo, Wood Group, Gilead Sciences, Jacobs, Halliburton, and Cavendish Nuclear. Our graduates are well-placed to find rewarding and lucrative careers or pursue further study, such as a PhD.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in chemical engineering or a closely related field.

English language requirements
See page 24.

Fees and funding
For fees see page 24 and for funding information see page 26.

Advanced Power Engineering

MSc 2 yrs FT

Programme description
This programme is designed to train power engineers in the most recent developments in the field. It will help you develop fundamental and applied research skills through a combination of taught courses, workshops and a comprehensive, full year research project supported by our world-leading Institute for Energy Systems. The programme of study has been specified to be rigorous for students who are interested in taking up professional posts with demanding research and development duties, or in continuing their studies towards a PhD.

Your learning experience will be augmented by a number of supporting activities delivered throughout the programme. You will develop a deep understanding of advanced power engineering concepts fostered throughout the programme and obtained from the supplementary training activities, study projects and your dissertation.

Programme structure
In Year 1 you will undertake a selection of fundamental and advanced courses in power engineering. In Year 2 you will engage in a two-semester 120-credit research project carried out either in industry or in collaboration with one of our power engineering research groups.

YEAR 1 COURSES PREVIOUSLY OFFERED INCLUDE:

Semester 1: Power Engineering Research Techniques; Energy & Environmental Economics; Technologies for Sustainable Energy; Power Systems & Machines; Power Conversion; Advanced Control for Power Engineering.

YEAR 2 COURSES PREVIOUSLY OFFERED INCLUDE:

Research dissertation.

Career opportunities
Power engineering is one of the most in-demand professions both in the UK and worldwide. As a graduate, you should find your skills readily suited to careers with government, energy consultancies, energy utilities, engineering or construction companies, and renewable energy developers. Alternatively you may pursue a career in research and academia through a PhD. We offer networking events, industrial presentations and seminars, and this programme benefits from our strong connections with industry, existing research associations and consortia such as the EPSRC, UK Centre for Energy Systems Integration.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in electrical and/or electronic engineering. Other closely related backgrounds may be considered on a case-by-case basis.

English language requirements
See page 24.

Fees and funding

Electrical Power Engineering

MSc 1 yr FT

Programme description
This programme is designed to equip you with a broad and robust training in modern power engineering technologies, with a strong focus on renewable energy conversion and smart grids. Taught courses, workshops and a group design project, led by leading experts in the field, cover key topics in power systems, electrical machines and power electronics. These include fundamental and emerging power engineering technologies; advanced numerical methods in application to electrical power engineering problems; modern power conversion components and systems; integration of renewable energy in the power system; distributed energy resources; electrical engineering aspects of energy storage; power, telecommunications and control aspects of smart grids; and research and innovation management techniques.

Programme structure
You will study two semesters of taught courses, followed by a research project leading to the submission of a dissertation applying your acquired skills to real problems in electrical power engineering.

SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:

Power Engineering Research Techniques; Energy & Environmental Economics; Technologies for Sustainable Energy; Power Systems & Machines; Power Conversion; Advanced Control for Power Engineering.

SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:

Power Systems Engineering & Economics; Advanced Electrical Machines; Power Electronics for Energy Systems; Electrical Power Engineering Dissertation; Plus options from Distributed Energy Resources and Smart Grids; Principles of Wind Energy; Solar Energy and Photovoltaic Systems.

Career opportunities
Graduates can be employed in the public or private sector, covering areas from generation to conversion and transmission of electrical power, design and manufacturing of power components and systems as well as energy policy and commerce. The MSc runs in close association with activities within the broader electrical engineering discipline of the School, including networking events and industrial presentations. MSc graduates may also progress to PhD study at Edinburgh or elsewhere. In the 2014 Research Excellence Framework (REF) 94 per cent of our research activity was rated either 4* world leading or 3* internationally excellent on the overall quality profile. The School has a very strong record in power engineering research and opportunities to progress to a PhD may become available to top graduates.

Entry requirements
A UK 2:1 degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in electrical and/or electronic engineering. Other closely related backgrounds may be considered on a case-by-case basis.

English language requirements
See page 24.

www.ed.ac.uk/pg/960
Electronics
MSc 1 yr FT

Programme description
This programme offers distinct specialisation areas in electronics: analogue VLSI (very large scale integration) design; bioelectronics; and analogue and digital systems. In analogue VLSI design, our facilities include a unique custom designed analogue integrated circuit specifically designed to support laboratory-based teaching. Our advanced design and prototyping laboratories, advanced micro and nano fabrication facilities and state-of-the-art digital system laboratories use the latest industry-standard software tools. Alternatively, students may specialise in the emergent discipline of bioelectronics, where our research and teaching interests include access to the fabrication facilities at the Scottish Microelectronics Centre. For students who wish to study a more general electronics programme including digital systems, a prescribed course selection is available.

Programme structure
This programme is run over 12 months, with two semesters of taught courses, including a small number of options, followed by a research project, leading to a master's thesis.

SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:
- Analogue IC Design: Analogue VLSI A; Analogue VLSI B; Discrete-Time Signal Analysis;
- Power Electronics: Principles of Microelectronic Devices; Digital Systems Laboratory A; Introduction to Bioelectronics; Biosensors.

SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:
- Digital System Design; Digital Systems Laboratory B; Research Project Preparation; Analogue Circuit Design; Microfabrication Techniques; Biosensors and Instrumentation Lab; On-chip Interconnect Technologies; Embedded Mobile and Wireless Systems; Modern Economic Issues in Industry; Technology and Innovation Management; Application of Sensor and Imaging Systems.

Career opportunities
You will gain practical experience in analogue and digital laboratories and become familiar with current industry-standard design software and environments. Having been exposed to concepts such as design re-use and systems on chip technology, you will be able to cooperate with others in electronic system design. Recent graduates are now working as applications, design, field and test validation engineers for employers such as BMW, Guangzhou Hangxin Avionics and Kongsberg Maritime.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in electronics or electrical engineering. We may also consider your application if you have appropriate professional experience.

English language requirements
See page 24.

Fees and funding

International Master of Science in Fire Safety Engineering
MSc 2 yrs FT

Programme description
This is a two-year programme in the Ehrhardt Munds framework, coordinated by Ghent University, Belgium, in partnership with Lund University, Sweden, and the University of Edinburgh, Classes in Ghent have a more general fire safety engineering focus and classes in Lund emphasise the fire dynamics. Ideal for students who wish to gain a more general fire safety engineering focus and become familiar with current industry-standard design software and use the latest image analysis techniques.

Programme structure
The four semesters are each worth 30 European Credit Transfer and Accumulation System (ECTS) credits. Changing study location after each semester lets you benefit from the expertise of each university.

SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:
- Ghent University: Fire Dynamics: Basics of Structural Engineering; Thermodynamics; Heat and Mass Transfer; Explosions and Industrial Fire Safety; Fire Options FSE Based Firefighting; Modelling of Turbulence and Combustion; Introduction to Entrepreneurship; Turbomachinery; Computational Fluid Dynamics; University of Edinburgh: Fire Science and Fire Dynamics; Fire Safety Engineering; Fire Safety, Engineering and Society; Engineering Project Management.

SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:
- Lund University: Advanced Fire Dynamics; Human Behaviour in Fire; Risk Assessment; Simulation of Fires in Enclosures.

SEMESTER 3 COURSES PREVIOUSLY OFFERED INCLUDE:
- Ghent University: Active Fire Protection 1: Detection and Suppression; Active Fire Protection 2: Smoke and Heat Control; Fire Safety and Regulation, Passive Fire Protection; Performance-Based Design; Plus options FSE Based Firefighting; Modelling of Turbulence and Combustion; Introduction to Entrepreneurship; Turbomachinery; Computational Fluid Dynamics; University of Edinburgh: Fire Investigation and Failure Analysis; Fire Science Laboratory; Structural Design for Fire; Finite Element Analysis for Solids.

SEMESTER 4 COURSES PREVIOUSLY OFFERED INCLUDE:
- The masters theses is supervised by at least one of the partner universities.

Career opportunities
We aim to train the next generation of leaders in this field. There is a strong demand for fire safety engineers worldwide and as a graduate you will have gained relevant employment or enhanced career opportunities.

Entry requirements
A bachelor's degree or recognised equivalent from an accredited institution (minimum three years' full-time study or 180 ECTS credits) in civil, structural, mechanical, electrical, chemical or industrial engineering; material sciences; chemistry; physics; applied physics; architecture, urbanism and spatial planning or a related discipline.

English language requirements

Leading Major Programmes*
MSc 2 yrs PT

Programme description
This programme will equip you with the formative knowledge and skills required by successful leaders of major programmes. It will cover all the basics for programme management and provide fundamental insights into the political and relationship management capabilities that are essential for Chairs, CEOs, COOs, CFOs, client sponsors and supply chain leadership teams to navigate risks in a major programme context. It will also provide coaching and mentoring in personal resilience to help you cope with uncertainty and change.

The programme will best suit mid-career professionals working as clients, project managers, engineers, delivery agents, contractors or project reviewers/auditors. It will be taught by a mix of academics and senior programme managers with hard-won lessons learned to pass on.

You will be taught through conventional classroom and studio-based lectures, tutorials and student-directed learning. Intensive residential periods are backed up by innovative online teaching. You will also take part in project work, workshops and collaborative problem solving sessions. Assessment is by written assignments and examinations, project reports and your dissertation.

Programme structure
This programme comprises taught courses run over a two-year period, followed by a research project and dissertation tailored either to the needs of your corporate sponsor or to your individual interests.

COMPULSORY COURSES PROPOSED INCLUDE:
- Knowledge and Action in the Data Society; Programme Design, Governance and Managing for Complexity; Procurement and Contracts; Strategic Risk Analysis; Fundamentals of Project Controls, Data Visualisation and Reporting; Negotiation Skills; Behavioural Studies; Team Dynamics; Oversight, Assurance and Managing Stakeholders; PhD/SME Managers as Researchers; Data Analytics: Qualitative and Digital Research Methods; Qualities for Successful Programme Leaders.

You will also select two or three options chosen from a wide range of relevant courses offered by the School of Engineering, School of Informatics, Business School, or Edinburgh School of Architecture & Landscape Architecture, or others by arrangement.

Career opportunities
Graduates will be equipped with an evidence-based strategic overview of programme management and an understanding of how to organise and manage for success and how to nurture and develop the personal qualities required to be a major programme leader. This will be beneficial to major programme-like roles in any field where complexity and change need to be managed, such as infrastructure, defence, information technology, healthcare, big science or large scientific infrastructures.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in engineering, management or economics or a degree in another discipline with elements of project and programme management. We will also consider your application if you have an honours degree in another discipline and can demonstrate adequate motivation and interest in the programme. All applicants must have a minimum of five years' project management experience at middle or senior management level. We may also consider your application if you have other qualifications or experience; please contact us to check before you apply.

English language requirements
See page 24.

*Subject to approval
**Sensor & Imaging Systems**

**MSc 1 yr FT**

**Programme description**

This programme is run jointly by the University of Edinburgh and the University of Glasgow. It focuses on the principles, methods, techniques and technologies which underpin a vast range of needs in applications spanning research, industry and medicine. Sensing and sensor systems are essential for advances in research across all fields of physics, engineering and chemistry and can be enhanced when multiple sensing functions are combined into arrays to enable imaging.

Industrial applications of sensor systems are ubiquitous—from mass-produced sensors found in modern smartphones and cars to the state-of-the-art, specialist high-value sensors routinely used in oil and gas recovery, scientific equipment, medical tools, medical equipment and environmental monitoring.

**Programme structure**

This programme is run over 12 months. The first semester of taught courses is run at the University of Glasgow and the second at the University of Edinburgh, followed by a research project, carried out in either an academic or industrial environment or in a specialist consultancy organisation. Engineers or other professionals wishing to participate in the MSc programme may do so on a part-time basis.

Our students gain a thorough understanding of theoretical foundations as well as advanced topics at the cutting edge of research in signal processing and communications, including compressive sensing, deep neural networks, wireless communication theory, and numerical Bayesian methods. Your MSc project will provide a good opportunity to work on state-of-the-art research problems in signal processing, communications, and machine learning.

**Programme structure**

This programme is run over 12 months, with two semesters of taught courses followed by a research project leading to a master thesis.

**SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:**

- University of Glasgow: Fundamentals of Sensing and Imaging; Imaging and Detectors; Detection and Analysis of Ionising Radiation; Circuits & Systems; Option course in physics or engineering.

**SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:**

- University of Edinburgh, two compulsory courses: Applications of Sensor Systems; Research Project Preparation. Two to four option courses in engineering and/or chemistry, e.g., Biophysical Chemistry; Physical Techniques in Action; Bioreactors and Instrumentation; Lab-on-Chip Technologies; Microfluidic Techniques; Electronic Product Design and Manufacture; Technology & Innovation Management.

**Career opportunities**

Sensors and imaging systems underpin a vast range of societal, research and industrial needs. This is an industry-focused programme, designed for students looking to develop the skills and knowledge that will open up opportunities in the many companies developing sensor and image basis solutions.

**Entry requirements**

- A UK 2:1 honours degree in engineering or its international equivalent (www.ed.ac.uk/international/graduate-entry), in engineering, physics, chemistry or another relevant physical science. Entry is competitive so we would prefer a UK 1st class honours degree, or a UK 2.1 honours degree supported by an MSc degree, or their international equivalents. We also consider your application if you have other qualifications or experience or a background in another field.

**English language requirements**

See page 24.

**Fees and funding**

For fees see page 24 and for funding information see page 26.

Some of our taught masters are related to those in other Schools and Colleges. You may be interested in programmes offered by the Centre for Medicine & Veterinary Medicine, or the Schools of Biological Sciences, Chemistry, Geosciences, Informatics, Mathematics or Physics & Astronomy.

www.ed.ac.uk/studying/prospectus-request

**Signal Processing & Communications**

**MSc 1 yr FT (2 yrs PT available for UK/EU students)**

**Programme description**

This programme provides graduates and working professionals with a broad training in signal processing and communications, including machine learning. The latest technical trends for recent graduates who wish to develop the specialist knowledge and skills relevant to these industries is also suitable as advanced study in preparation for research work in an academic or industrial environment or in a specialist consultancy organisation. Engineers or other professionals wishing to participate in the MSc programme may do so on a part-time basis.

Our students gain a thorough understanding of theoretical foundations as well as advanced topics at the cutting edge of research in signal processing and communications, including compressive sensing, deep neural networks, wireless communication theory, and numerical Bayesian methods. Your MSc project will provide a good opportunity to work on state-of-the-art research problems in signal processing, communications, and machine learning.

**Programme structure**

This programme is run over 12 months, with two semesters of taught courses followed by a research project leading to a master thesis.

**SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:**

- Discrete-Time Signal Analysis; Digital Communication Fundamentals; Probability, Estimation Theory and Random Signals (PETARS); Image Processing; Digital Signal Processing Laboratory.

**SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:**

**Career opportunities**

With our excellent employability record and our international reputation, the University of Edinburgh is an outstanding destination for engineering graduates. This programme will prepare all graduates who wish to pursue a career in industries such as communications, radar, medical imaging, data science and machine learning, or anywhere else signal processing is applied.

**Entry requirements**

A UK 2:1 degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in engineering, physics, chemistry or another relevant physical science. Entry is competitive so we would prefer a UK 1st class honours degree, or a UK 2.1 honours degree supported by an MSc degree, or their international equivalents. We also consider your application if you have a background in a related field, such as computer science, physics or mathematics. Entry to this high level programmes is competitive, so we expect high grades in fundamentals, such as mathematics, signals and systems, probability and statistics, and communications and signal processing.

**Structural & Fire Safety Engineering**

**MSc 1 yr FT**

**Programme description**

Innovative design allows more interesting and functional architecture but challenges traditional concepts of fire safety. To respond to these demands takes specialist knowledge and advanced skills in engineering analysis. This programme covers the fundamentals of fire science, including laboratory classes, fire safety engineering and relevant structural design engineering topics, such as finite element methods. You will gain knowledge of the critical issues in structural fire safety engineering, and an understanding of relevant fire and structural behaviour. The programme is familiar with performance-based approaches to design and have an awareness of the capabilities – and limitations – of relevant advanced modelling methods for structures and fire. Our Building Research Establishment is the go-to source for Fire Safety Engineering using hosts bespoke equipment to support groundbreaking research and teaching, with combined thermal and mechanical loading and use of the latest image analysis techniques.

This programme is fully accredited by the Joint Board of Moderators: www.jbm.org.uk

**Programme structure**

You study two semesters of taught courses, a research project and thesis.

**SEMESTER 1 COURSES PREVIOUSLY OFFERED INCLUDE:**

- Fire Science and Fire Dynamics; Structural Design for Fire; Finite Element Analysis for Solids; Fire Investigation and Failure Analysis; Fire Safety, Engineering and Society; State of the Art Review in Fire Safety Engineering; Steel Structures.

**SEMESTER 2 COURSES PREVIOUSLY OFFERED INCLUDE:**

- Fire Science Laboratory; Models for Fire Safety; The Finite Element Method; Numerical Simulation; Earthquakes Engineering.

**Career opportunities**

Internationally, there is great demand for graduates in this field with expertise in structural fire safety engineering particularly sought after as performance-based design expands. All of our previous graduates are in relevant employment, with the majority working in fire teams at engineering consultancies.

**Entry requirements**

A UK 2.1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in civil engineering or a related subject. We may consider your application if you have a background in a field other than civil engineering.

**English language requirements**

See page 24.

**Sustainable Energy Systems**

**MSc 1 yr FT**

**Programme description**

This MSc provides advanced MSc and postgraduate diploma (PgDip) degrees in programmes based within a world-leading renewable energy research group that equips graduates and professionals with a broad and robust training. Where modern solar energy technologies are covered, as well as the wider environment in which they fit, including: resource assessment; energy production, delivery and consumption; efficiency; sustainability; economics; policy and regulation; and grid/smart grid systems. In addition, our MSc students actively engage in research as part of their dissertation projects within the Institute of Energy Systems or with industry, with some joining our PhD community afterwards. This programme is accredited as counting towards further living (FL), as a requisite in the education of Chartered Engineer (CEng). The programme is also affiliated with the University’s Global Environment & Society Academy - www.ed.ac.uk/global-environment-society

**Programme structure**

This programme is run over 12 months, with two semesters of taught courses followed by a research project leading to a master thesis.

**COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:**

**OPTION COURSES PREVIOUSLY OFFERED INCLUDE:**

- Depending on quotas and timetabling, we can offer further courses from the Schools of Engineering, Geosciences, and Social & Political Science, from Edinburgh School of Architecture & Landscape Architecture (ESALA), and from the Business School.

**Career opportunities**

Graduates are in high demand in a range of activities in industry, public organisations or academia. The MSc has well-established links with industry, with many graduates finding employment with leading national and international organisations involved in the design and/or construction of renewable energy projects. Recent graduates are now working as civil, structural, automotive, subsea and electrical engineers and as power systems, energy and environment and renewable energy engineers. Employing firms include Aviemore Dennison, GE, Schneider, SSE, Scottish Power and many others.

**Entry requirements**

- A UK 2.1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in engineering or physics. If you apply with a background in another field, you may be accepted if you hold a UK first class honours degree, or its international equivalent, and have studied mathematics to first year undergraduate level, including vectorial calculus (gradients, curls, etc.), complex algebra and/or basic calculus. You may also be able to demonstrate a strong interest in the energy sector.

**English language requirements**

www.ed.ac.uk/studying/prospectus-request
Research at the School of Engineering

We offer a comprehensive range of exciting research opportunities through a choice of postgraduate programmes: PhD, EngD, MPhil and MSc by Research. We also provide a range of services to support you to develop your research project to its full potential.

PhD
As a PhD candidate you pursue a research project under continuous guidance, resulting in a thesis that makes an original contribution to knowledge. In the School of Engineering our PhD candidates work linked to an industrial supervisor. If your project is resulting in a thesis that makes an original project under continuous guidance, as a PhD candidate you pursue a research PhD

MSc by Research
An MSc by Research is based on a research project tailored to a candidate’s interests. It lasts one year full time or two years part time. The project can be a shorter equivalent to an MPhil or PhD, or a precursor to either - including the option of an MSc project expanding into MPhil or doctorate work as it evolves. It can also be a mechanism for industry to collaborate with the School.

MPhil
The Master of Philosophy (MPhil) resembles a PhD but generally takes two years instead of three and does not carry the same requirement for an original contribution to knowledge. You pursue your individual research project under supervision, submitting your thesis at the end of the project.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in an appropriate subject, or relevant qualifications and experience. Please contact us to check the specific entry requirements for your programme before you apply.

Research support
The development of transferable skills is a vital part of postgraduate training and a vibrant, interdisciplinary training programme is offered to all research students by the University’s Institute for Academic Development (IAD). The programme concentrates on the professional development of postgraduates, providing courses directly linked to postgraduate study (for example Thesis Workshop and Paper Production) and future careers (for example Career Planning and Team Development).

Courses run by the IAD are free and have been designed to be as flexible as possible so that you can tailor the content and timing to your own requirements.

More information: www.ed.ac.uk/iad/postgraduates

Showcase your work
Every year, the School of Engineering’s Graduate School organises a postgraduate research conference to showcase the research carried out by students across the research institutes. Our researchers are strongly encouraged to present their research at conferences and in journals during the course of their PhD. They are also encouraged and supported to attend transferable skills courses provided by organisations such as the EPSRC.

Business development
The role of our business development team is to help form industry partnerships, including the sponsoring of research, to enable the commercialisation of University intellectual property and successful technology transfer.

Edinburgh Innovations, the University’s research and commercialisation office, provides a complete range of services for researchers, inventors, consultants and entrepreneurs in the University’s academic community.

More information: www.edinburgh-innovations.ed.ac.uk

Career prospects
Research graduates enter a wide range of fields, including automotive, communications, defence, medical imaging, engineering consultancy, construction, renewable energy and the semiconductor industry. Many go on to further research. Opportunities for our PhD graduates include postdoctoral fellowships, lecturing roles and research contacts in universities, research institutes or industry.

MPhil
This is a four-year doctoral research and training programme equivalent to a PhD but achieved through research which is much more industrially focused, and designed to produce graduates who have a sound understanding of the business implications of industrial research activity. Professional doctorates are specialist qualifications aimed at professional development.

EngD
This is a four-year doctoral-level research and training programme equivalent to a PhD but achieved through research with industry as a co-maker of the research project. This is particularly suitable for professional researchers who wish to place their research in context with their workplace, and who wish to use their research to develop and implement solutions to real world problems.

School of Engineering Postgraduate Opportunities 2019

The Centre and its committed group of researchers have transformed the way the world regards structural design for fire.

See more online: www.ed.ac.uk/research/impact

Case study: Edinburgh’s research with impact
Informing the safety of iconic constructions
True fire resistance, along with an understanding of just how fires grow and spread, is key to preventing tragedies. The University’s BRE Centre for Fire Safety Engineering focuses on the two main areas of building fire safety – detection, containment and suppression of fires, and performance-based design. Over 40 years, the Centre and its committed group of researchers have transformed the way the world regards structural design for fire.

Project background
Engineering consultancy giant Arup faces the challenge of fire safety in every building project it takes on. For advice and expertise in this area, the company calls on the BRE Centre, which leads the way in innovative research and building methodologies. Drawing on the tradition of world-leading academic and practical expertise established by its distinguished founders and teaching staff, the Centre entered into collaboration with Arup on the design of London’s Heron Tower to provide the designers with the tools they needed to analyse fire initiation, growth and spread, and create a structural response appropriate to a large, multi-storey building with open-plan compartments and a central atrium.

Project results
Without the information provided by the Edinburgh researchers, Heron Tower could not have been approved or built. The Centre’s expertise is also sought by international building and fire code committees including the American Concrete Institute, the British Standards Institute, and the International Council on Tall Buildings and Urban Habitat. The BRE Centre has created an entirely new type of design consultancy in performance-based structural fire engineering, which is being applied to great advantage by major international engineering firms in UK buildings and further afield.

The Centre and its committed group of researchers have transformed the way the world regards structural design for fire.

Engineering

Programme aims
This programme will train you as a researcher, allowing you to develop advanced techniques and in-depth knowledge in a specialist area of engineering along with a broad range of transferable skills. You will carry out independent research, resulting in an original contribution to knowledge in your chosen area, working under the guidance of your supervisors in one of our research institutes. To be awarded a PhD, you will submit a thesis and defend it in an assessed oral exam.

Programme structure
You will be required to discuss, and regularly review, your training needs with your supervisor and attend a balanced selection of training courses and personal development, including: compulsory induction; final-year undergraduate or postgraduate courses (if appropriate); transferable skills courses; and your research institute’s seminar series, talks, workshops and conferences. In agreement with your supervisors, you will present your work at relevant conferences and workshops and publish your research in appropriate journals. You will attend the School’s annual research conference and conferences and workshops and publish your research in appropriate journals. You will attend the School’s annual research conference and conferences and workshops and publish your research in appropriate journals. You will attend the School’s annual research conference and conferences and workshops and publish your research in appropriate journals.

Research opportunities

• Biomedical modelling and measurement – understanding biological parameters (e.g. oxygen concentration) along with sensors of specific biomarkers of disease and therapy.

Institute for Digital Communications (IDCOM)
IDCOM is the UK’s leading research institute in signal processing and communications and is home to the LiFi research and development centre. We have three major centres of activity: signal processing, communications systems and tomographic imaging. Our programme delivers world leading research in signal and image processing and communications from fundamental theoretical and algorithmic work through to its translation to specific audio, imaging, radar/sonar, and communications applications. The institute has excellent research facilities, including state-of-the-art computing systems and laboratories for agile tomography, and audio signal processing, as well as the LiFi research and development centre for visible light communications. Internationally recognised for our research on communications systems and signal processing, we offer research topics including: green radio; visible light communications; cognitive radio; compressive sensing; distributed sensor signal processing; and agile tomography. IDCOM holds the only UK Research Council platform award in sensor signal processing, in collaboration with the joint research institute in signal and image processing at Heriot-Watt University, recognising our world-leading research status.

Institute for Energy Systems (IES)
IES helps shape tomorrow’s difficult energy decisions in decarbonising society. It continues a long line of world-leading innovation by Edinburgh researchers, including the 1970s ‘Duck’ wave energy converter, invented by Stephen Salter – now Emeritus Professor of Engineering Design. Our research covers all aspects of the low carbon energy chain:
• resource modelling, impact of climate change, wind, wave, tidal, and solar;
• energy, electrical power conversion, energy storage, carbon capture;
• biofuels and delivery into the electrical network; and
• low carbon vehicles – developing more efficient internal combustion engines.

Institute for Infrastructure & the Environment (IIE)
IIE is among the leading centres of civil and environmental engineering research in the UK. The institute seeks new technologies to solve real-world problems in order to promote sustainability. Key research areas include: behaviour and design of structures in fire and other extreme events; fire science and fire safety engineering; shells and containment structures; nonlinear finite element modelling of complex structures and structural collapses; mechanics and transport of granular materials and multiphase media; computational mechanics and bio-mechanics; fibre reinforced polymer composites in structural strengthening and repair; high-speed rail; intelligent infrastructure and non-destructive evaluation; sustainable water and wastewater treatment technologies; water supply; and waste management and resource recovery. IIE has excellent laboratory and computing capabilities, including the latest facilities and instrumentation for experimental and computational research in structures, granular solids, fire safety engineering, non-destructive testing and environmental engineering.

This programme will train you as a researcher, allowing you to develop advanced techniques and in-depth knowledge in a specialist area of engineering along with a broad range of transferable skills. You will carry out independent research, resulting in an original contribution to knowledge in your chosen area, working under the guidance of your supervisors in one of our research institutes. To be awarded a PhD, you will submit a thesis and defend it in an assessed oral exam.

Research environment
Our world-leading research is conducted through our research institutes:

Institute of Bioengineering (BiObE)
BiObE connects engineering, physical sciences, biology and medicine, for innovative diagnostic and therapeutic biomedical devices and technologies. Research themes include:
• Synthetic biology – to design and construct [e.g. to ‘engineer’] biological devices and systems, often at cellular level. Applications range from therapeutic to environmental;
• Tissue engineering – the production of 3D or 2D scaffolds or guidance cues for biological cells. Applications are largely therapeutic and also include new forms of lab-on-chip technology;
• Biomedical modelling and measurement – understanding biological materials through modelling and measurement for applications in, for example, prosthetics, prediction of failure in blood vessels and the behaviour of bone with ageing. We also study the behaviour of biological materials experimentally and, in most cases, non-invasively (e.g. via Raman spectroscopy and CARS microscopy);
• Biomedical devices and sensors – working with colleagues in chemistry, we develop sensors on silicon for simple biological parameters (e.g. oxygen concentration) along with sensors of specific biomarkers of disease and therapy.

Institute of Digital Communications (IDCOM)
IDCOM is the UK’s leading research institute in signal processing and communications and is home to the LiFi research and development centre. We have three major centres of activity: signal processing, communications systems and tomographic imaging. continued...
Institute for Integrated Micro & Nano Systems (IMNS)

IMNS brings together researchers from integrated circuit design, system-on-chip design, image-sensor design, bioelectronics, micro-/nano-fabrication, microelectromechanical systems (MEMS), micromachining, neural computation, and reconfigurable and adaptive computing. Other research interests include low-level analogue, low-power, adaptive and bio-inspired approaches, system-on-chip computing, and applications from telecommunications to finance and astronomy. There is also a research focus on integrating CMOS microelectronic technology with sensors and microsystems/MEMS to create smart sensor systems. We have a strong and growing interest in applications relating to the life sciences and medicine, particularly on bioelectronics, biophotonics and bio-MEMS. IMNS has laboratory facilities that are unique within the UK, including an advanced silicon and MEMS microfabrication capability coupled with substantial design and test resources. The institute has an excellent reputation for commercialising technology.

Institute for Materials and Processes (IMP)

IMP brings together researchers from materials science and chemical, mechanical and bio-engineering, conducting world-class research into every conceivable kind of material. Work covers the design, synthesis and processing of materials, as well as biomedical and process engineering. IMP has one of the UK’s largest carbon capture engineering research groups, and particular strength in biomedical and biological engineering. The institute has excellent laboratory facilities, including the latest instruments for research in adsorption, biomedical engineering, conservation materials science, high pressure and temperature advanced materials synthesis, ice mechanics, and particular strength in multiphase flows and multiscale modelling. We provide high-quality training in research.

Institute for Multiscale Thermofluids (IMT)

IMT is our newest research institute. It works at the forefront of research in multiphase, interfacial and reacting flows; bridging the time and spatial scales between molecular processes and technological devices. The institute covers three different yet overlapping research themes:

- Non-continuum and non-equilibrium fluid mechanics
- Multiphase flows, interfaces, and phase change from nano- to macro-scales
- Multiphase, interfacial and chemically reacting flows at the macro scale.

IMT has world-class experimental facilities, including a low-carbon combustion lab, multiphase flows with phase change, and state-of-the-art modelling expertise in multiscale and multiphase modelling.

Taught professional doctorates

The professional engineering doctorate (EngD) is a specialist qualification aimed at professional development. The School of Engineering is home to two professional doctorate programmes; one in offshore renewable energy and one in sensor and imaging systems. These training and research programmes are equivalent in standing to a conventional PhD but are aimed at students who want a research career in industry.

You will complete a broad, masters-level training programme, then go on to carry out research while working directly with a company.

Research opportunities

research while working directly with a company.

training programme, then go on to carry out

in offshore renewable energy and one in sensor

and fieldwork skills, while a group design project helps you develop
teamworking skills and apply your knowledge.

Following this initial period of teaching, you will join a sponsoring
company to work as a researcher for the rest of the programme.
The industrial research is supplemented by summer schools in a sponsoring
in Oban, Wallingford and Falmouth, and online integrated studies in
management, business, innovation, enterprise and entrepreneurship.

At the end of the research work you will deliver either a doctoral thesis or a portfolio of related project work that is examined for the award of
an EngD in Offshore Renewable Energy, which is a joint degree from the
Universities of Edinburgh, Exeter and Strathclyde.

Funding

A scholarship that covers fees and a stipend is available for suitably qualified and eligible applicants. There are normally 10 of these scholarships available for each intake of students and they are awarded competitively. Full awards (stipend and fees) are available for EU citizens who have been living in the UK for at least three years before the start of the programme. Other EU candidates are eligible for a fees-only award if they are ordinarily resident in a member state of the EU. There is a small quota of full studentships for exceptional EU and international candidates. Applications from self-funded candidates will also be considered.

Entry requirements

A UK first-class honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry). We will also consider your application if you have a UK 2:1 honours degree and an MSc degree with distinction, or their international equivalents, and substantial relevant work experience. We expect you to have a good understanding of one or more branches of science or engineering and some relevant research experience.

Eligibility

UK Visas and Immigration (UKVI) regulations now mean we can accept self-funded overseas students who need a CAS for a Tier 4 Visa.

Offshore Renewable Energy

EngD 4 yrs FT

Programme description

The Industrial Doctoral Centre for Offshore Renewable Energy (IDCORE) is a partnership of the Universities of Edinburgh, Strathclyde and Exeter, together with the Scottish Association for Marine Science and the research association HR Wallingford.

IDCORE’s four-year engineering doctorate programme is a doctoral-level research and training programme, equivalent in academic standing to a conventional PhD, but achieved through research that is much more industrially focused. It is designed to produce graduates who have a sound understanding of the business implications of industrial research. EngD students follow a programme based on three elements: postgraduate-level training; transferrable skills and leadership; and research.

Programme structure

You will spend the first two semesters attending an intensive programme of 12 taught courses, delivered by internationally-renowned academic staff from the partner universities. These first two semesters provide you with the skills required to get started on your research and to succeed in an industry environment. Practical courses teach important laboratory and fieldwork skills, while a group design project helps you develop teamwork skills and apply your knowledge.

At the end of the research work you will deliver either a doctoral thesis or a portfolio of related project work that is examined for the award of an EngD in Offshore Renewable Energy, which is a joint degree from the Universities of Edinburgh, Exeter and Strathclyde.

Funding

A scholarship that covers fees and a stipend is available for suitably qualified and eligible applicants. There are normally 10 of these scholarships available for each intake of students and they are awarded competitively. Full awards (stipend and fees) are available for EU citizens who have been living in the UK for at least three years before the start of the programme. Other EU candidates are eligible for a fees-only award if they are ordinarily resident in a member state of the EU. Sensor & Imaging Systems

EngD 4 yrs FT

Programme description

Sensor and imaging systems (SIS) are central to modern life, and appear in fields as diverse as transport, biomedicine, agriculture and environmental monitoring. The Engineering Doctorate in Sensor & Imaging Systems is a vocational programme of leading-edge research for industry in this field. Academically equivalent to a PhD, the EngD emphasises research in a commercial environment, supplemented by masters-level technical training and MBW-style business courses. Projects all have an industry sponsor and you will spend up to 75 per cent of your time working on-site with that company. EngD students, known as Research Engineers (REs), work closely with the sponsoring company, under the direction of an industrial supervisor and an academic supervisor from the University.

Programme structure

You will undertake two semesters of research-focused training, delivered by internationally-renowned academic staff. The first semester is based in Glasgow and the second in Edinburgh. The curriculum has a substantial overlap with that of the EPSRC Centre for Doctoral Training in Integrative Sensing & Measurement and much of the training involves working together as a cohort or in smaller groups. It includes:

• the fundamentals and applications of sensor and imaging systems;
• focused practical courses on laboratory skills; and
• creativity, dissemination, advocacy, enterprise and transferable skills.

This is followed by a 40-month research project, based in a sponsoring company, and business and management courses offered by Heriot-Watt University’s Edinburgh Business School. You will normally be matched with a company and project when your offer of a place is made. Projects reflect varied applications of sensing and measurement, across a range of sensing modalities – physical, chemical, mechanical, optical and more.

Funding

Suitably qualified and residually eligible students receive an award comprising tuition fees, an enhanced tax-free student stipend and funding to support training, conference attendance and travel. Self-funded applicants will also be considered.

Career opportunities

SIS meets a range of societal, research and industrial needs. Sensing is vital for advances in capability across all fields of physics, engineering and chemistry. It is enhanced when individual sensing units are configured in arrays to enable imaging or if multiple sensing functions are integrated into a single smart system. Industrial SIS applications are ubiquitous from mass-produced sensors found in modern smartphones and automobiles to the state-of-the-art, specialist, high-value sensors routinely used in oil and gas recovery, scientific equipment, machine tools, medical equipment and environmental monitoring.

Entry requirements

A UK 2:1 honours degree or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a relevant science or engineering discipline. Entry is competitive, so we would prefer a UK first class honours degree, or its international equivalent, in engineering, physics, chemistry or another relevant physical science. We may also consider your application if you have other qualifications or experience, or a background in another field.

English language requirements

Fees and funding

For fees see page 24 and for funding information see page 26.

Programme Director
Doctor Tony Kelly (anthony.kelly@glasgow.ac.uk)
Programme Administrator
Sian Williams, CENDIS (sian.williams@censis.org.uk)
Edinburgh enquiries Professor Ian Underwood (ianunderwood@ed.ac.uk)
About the School of Engineering

Our School is a hotbed of innovation. In the 2014 Research Excellence Framework (REF), 94 per cent of our research activity in general engineering was rated 4* world leading or 3* internationally excellent on the overall quality profile. We have a strong track record of producing technology spin-outs and we develop industry links to help you build relationships that will last your whole career.

We're one of the University's largest Schools, with more than 350 postgraduates, 1,400 undergraduates and more than 150 staff. Our vision is to achieve excellence in all our teaching and research areas, from the science and mathematics that underpin engineering research to its industrial and commercial applications. Our teaching disciplines are accredited by their relevant professional engineering bodies and six specialist research institutes sit within the School:

Bioengineering
The Institute for Bioengineering has interests in biosensing, tissue engineering, biomedical measurement, modelling and applications. We’re developing innovative diagnostic, therapeutic and real-time monitoring biomedical devices and technologies. We demonstrated the first ex vivo and in vivo probing of mechanical characteristics of prostate cancer for monitoring disease progression. Our IMPACT (Implantable Microsystems for Personalised Anti-Cancer Therapy) project will use miniature wireless sensors for minute-to-minute monitoring of individual tumours. Both projects are in collaboration with clinicians from the Western General Hospital in Edinburgh and are funded by the Engineering and Physical Sciences Research Council.

Digital communications
The Institute for Digital Communications pioneers new theories and techniques in the fields of signal processing, imaging and communications, technologies that have come to power the global economy. Among recent highlights, Professor Harald Haas’ Li-Fi system of lightbulb-based wireless communication was named among the world’s top inventions by Time magazine.

Energy systems
The Institute for Energy Systems is shaping the difficult energy decisions of the future. It is continuing a tradition of world-leading innovation from the 1970s ‘Duck’ wave energy converter, invented by Professor Stephen Salter, to direct-drive electrical generators, wave-generation technology and hydraulic transmission systems. Our research covers machinery, electronics, power distribution, marine energy, including offshore wind generation, climate change impact assessment and policy development.

Infrastructure and environment
The Institute for Infrastructure and Environment develops better technologies to improve the built and natural environments. It hosts the world-leading Building Research Establishment (BRE) Centre for Fire Safety Engineering and outstanding activities in environmental engineering, bulk materials handling, high-speed rail, non-destructive testing, design, performance, resilience and regulation of structures and systems.

Integrated micro and nano systems
The Institute for Integrated Micro and Nano Systems’ research encompasses integrated circuit design, system-on-chip design, microfabrication, micro-electro mechanical systems (MEMS), micro-machining and neural computation. Research themes include materials and structures, optical systems and materials, sensors, smart MEMS technology, and smart wireless devices and systems.

Materials and processes
The Institute for Materials and Processes produces world-class research to advance engineering applications of materials, fluids and processes. We use experimental, computational and theoretical methods to shed light on the underlying engineering science. Our research tackles societal challenges, from reducing CO₂ emissions, to sustainable energy, clean water and medical diagnostics and therapeutics. Research themes include carbon capture and separation, multiscale modelling, multiphase flows and transport phenomena, and materials design and characterisation.

Multiscale thermofluids
Research in the Institute for Multiscale Thermofluids spans the range of length and time scales from angstroms to metres, and from femtoseconds to minutes. Our work focuses on uncovering and predicting fluid phenomena theoretically, numerically and experimentally; from interfacial dynamics at the nano scale, to blood flows at the millimetre scale and to fluid jets at the centimetre scale. The fluids are gases, liquids, or even supercritical and they can be inert or chemically reacting. Applications of such research include nano-filtering seawater to make it drinkable, nano heat-exchanges to cool high power computer chips, micro-fluidics for processing and sensing, supercritical jets in high efficiency engines and gas turbines, supercritical processing of alternative fuels, and fundamentals of combustion in down-sized engines for electric vehicles. Research themes include non-continuum and non-equilibrium fluid mechanics; multiphase flows, interfaces and phase change from nano- to macro-scales; and multiphase, interfacial and chemically reacting flows at the macro-scale.
Facilities and resources

From supercomputing to structural testing, the facilities for your postgraduate studies at the School of Engineering are among the best in the world.

Unique resources
We have computing facilities unique to the UK, including the Edinburgh Parallel Computing Centre (EPCC), a leading European centre for research, and the silicon fabrication capabilities of the Scottish Microelectronics Centre (SMC), which also has extensive “class 10” cleanrooms, and provides rare access to tools for processing 200mm silicon wafers. The SMC has strong links with industry and spin-out activity, generating annual turnover of more than £1 million.

State-of-the-art facilities
The BRE Centre for Fire Safety Engineering hosts bespoke equipment to support groundbreaking research and consultancy with precisely controlled high temperatures and the latest image analysis techniques. The recently refurbished Structures Test Hall is our high-headroom lab for testing large and unusual assemblies. We have state-of-the-art lab facilities for developing and testing non-destructive evaluations and material-handling technologies. We also have a smart infrastructure lab and a wide range of environmental engineering testing resources for the water and waste management sectors.

New investment
Our £6.5 million Industrial Doctorate Centre in Offshore Renewable Energy is a new facility that will train 50 engineering doctorate students over nine years in all aspects of offshore renewable energy. The University’s leadership in low-carbon energy has been further enhanced by a £9 million investment in the FlotWave Ocean Energy Research Facility for wave and tidal devices.

Students of biomechanics have access to the best medical imaging facilities in Europe, the Clinical Research Imaging Centre at the Royal Infirmary of Edinburgh, through a major collaboration between the University and the National Health Service. In addition to outstanding University-based resources, postgraduate programmes use visits to external sites and facilities to gain research data and to contextualise learning.

Collections of the University
The University of Edinburgh has one of the world’s great collections, which has been growing ever since its foundation in 1583. Our collections include rare books, archives and manuscripts, art, historical musical instruments and a wide range of museum objects from geological specimens to anatomical models. If laid out end to end, we would have almost 60 kilometres of shelving and storage space devoted to our heritage material, from 1st-century Greek papyrus fragments to new works of sculpture. This is curated by specialist staff across 45 sites and used for our teaching and research and by the wider public community.

The Centre for Research Collections in the Main Library is the hub for all our collections, where specialist curators make them available for study, research and pleasure. Postgraduate students are welcome to study original objects and have made many important research discoveries while working on the archives. You will find an incredible range of material in our collections that is available nowhere else in the world.

We have £10 million support for doctoral training centres in offshore renewable energy and integrated sensor systems.

Community

Our graduate community is large and diverse, composed of 100 academics and more than 350 postgraduate students representing more than 50 nationalities. Our research spans a wide spectrum of modern engineering and we are equipped with state-of-the-art resources, keeping us at the forefront of our research fields.

Unique partnerships
We’re a partner in a number of interdisciplinary centres, based both within and beyond the University, from which postgraduate research students can derive additional expertise. These include:

- UK Centre for Carbon Capture and Storage;
- Centre for Biomedical Engineering at Edinburgh;
- Centre for Materials Science and Engineering;
- Centre for Science at Extreme Conditions; Scottish Mechanotransduction Consortium;
- Edinburgh Materials Microanalysis Centre.

In addition, postgraduate students can draw on the unique Edinburgh Research Partnership in Engineering and Mathematics (ERPem), a research consortium involving the University of Edinburgh, Heriot-Watt University and Edinburgh Napier University.

More information: www.erp.ac.uk

Pioneering people
From telephone inventor Alexander Graham Bell to geologist James Hutton, the University of Edinburgh has produced many leading lights in the field of science and engineering. By joining our School you will follow in the footsteps of some of engineering’s most pioneering individuals. Our staff, students and alumni have a long tradition of making a vital contribution to contemporary living.

Inventor of the cable car Fleeming Jenkin was Professor of Engineering at the University during the 19th century, and William Rankine, a key contributor to the science of thermodynamics, was educated at Edinburgh.

In more recent times, the late Sir James Hamilton – one of our graduates – was responsible for the wing design on aviation icon Concorde. Professor Stephen Salters, who is based at the School as an Emeritus Professor, is widely considered a pioneer in the field of wave energy (Salter’s Duck is featured on the prospectus cover), while Professor Harald Haas, Chair of Mobile Communications, has attracted international interest with his ‘Li-fi’ invention. He was named one of the UK’s 10 RISE leaders in the Engineering and Physical Sciences Research Council’s 2014 awards Recognising Inspirational Scientists and Engineers (RISE).

Our entrepreneurial engineers have also made significant contributions to modern gadgets, such as the iPod and the camera phone. The Institute for Integrated Micro and Nano Systems (IMNS) holds the world record for producing the smallest colour TV screen – just 3.84x2.88mm.
Employability and graduate attributes

With our excellent employability record and international reputation, the University of Edinburgh is a strong choice for developing your engineering career. Whether you are looking to make your mark in industry, consultancy or academia, or develop a business venture of your own, we offer a number of services to help you fulfil your ambitions and make the most of your time here.

In the School of Engineering, we have a strong track record of producing more than 50 technology spin-outs and developing industry links that enable our graduates to build career-long relationships: www.eng.ed.ac.uk/studying/whyedinburgh

Institute for Academic Development
All postgraduate students can benefit from our Institute for Academic Development (IAD), which provides information, events and courses to develop the skills you will need throughout your studies and in the future. IAD events also offer the perfect opportunity to meet and network with other postgraduates from across the University.

Further information is available online: www.ed.ac.uk/iad/postgraduates

For taught postgraduates, IAD provides a popular study-related and transferable skills support programme. It is designed to help you settle into postgraduate life, succeed during your studies and move confidently to the next stage of your career. We offer on-campus and online workshops and one-to-one study skills consultations, plus online advice and learning materials. Workshops and learning resources cover key topics tailored to different academic stages, including: pre-arrival sessions; getting started with your studies; critical reading, writing and thinking; managing your exams; and planning for and writing up your dissertation.

IAD also provides a comprehensive programme of transferable skills training, resources and support for researchers completing a doctorate. The workshop programme is designed to help you successfully prepare for the various milestones of your PhD, from getting started with your research, to writing up and preparing for the viva, as well as developing personal and professional skills that can be transferred to your future employment. Workshops cover topics such as writing skills, reference management tools, statistics, preparing for conferences, delivering presentations, time and project management, and personal development. IAD also offers online resources and planning tools to help get your research started, plus support for tutoring and demonstrating, and research public engagement and communication.

Careers Service
Our Careers Service plays an essential part in your wider student experience at the University, offering a range of tailored careers and personal development guidance and support. We support you to recognise the wealth of possibilities ahead, while at university and after graduation, helping you explore new avenues, tap into your talents and build your employability with confidence and enthusiasm.

We provide specialist support for postgraduate students. From exploring career options to making decisions, from CV writing to interview practice, from Employ.ed internships to graduate posts and from careers fairs to postgraduate alumni events, we will help you prepare for the future.

We sustain and continually develop links with employers from all industries and employment sectors, from the world’s top recruiters to small enterprises based here in Edinburgh. Our employer team provides a programme of opportunities for you to meet employers on campus and virtually, and advertises a wide range of part-time career options to making decisions, from CV writing to interview practice, from Employ.ed internships to graduate posts and from careers fairs to postgraduate alumni events, we will help you prepare for the future.

More information: www.ed.ac.uk/careers/postgrad

Platform One
Platform One is an online meeting place where members of the University community, past and present, can gather. It aims to provide a supportive environment where students, alumni, staff and volunteers can share knowledge and experiences. Together, we form a single community that meets on Platform One. Join us and find out more about the people and possibilities.

Backing bright ideas
LAUNCH.ed is the University’s award-winning programme for student entrepreneurs. Each year, LAUNCH.ed works with hundreds of students to assess their ideas and develop their business skills and helps many start their businesses. We have helped Edinburgh students and alumni launch almost 100 new businesses in the last three years, ranging from language tuition to robotics companies.

More information: www.LAUNCH.ed.ac.uk

Research support
We encourage our researchers to gain experience and skills through presenting research via formal outlets such as journals or conferences throughout the duration of your programme. Research students may also have access to courses offered by other organisations such as the Engineering and Physical Sciences Research Council (EPSRC).

More information: www.LAUNCH.ed.ac.uk/researchsupport

One of our exciting spin-out companies has pioneered fast wireless data streaming using lightbulbs. www.purelifi.co.uk
Applications and fees

We have an online application process for all postgraduate programmes. The system gives full instructions, including details of any supporting documentation you need to submit, such as references, degree transcripts or research proposals.

When applying, you will set up an account, which lets you save your application and continue at another time. Full guidance on our application system is available at: www.ed.ac.uk/postgraduate/applying

General requirements
Our usual entrance requirement for postgraduate study is a UK 2:1 honours degree, or its international equivalent (see www.ed.ac.uk/international/graduate-entry), in engineering, chemistry, biosciences, geosciences, physical sciences or mathematics. You will also need to meet the University’s language requirements (see right). Entry requirements for individual programmes can vary, so check the details for the specific programme you wish to apply for.

Our selection process for PhD programmes is competitive. Experience working within your chosen field can be beneficial, but an MSc is not always required for entrance to doctorate-level studies.

References
For applications to taught programmes, the normal requirement is one reference, although an additional reference may be requested in individual cases. For applications to research programmes, two references are required. You should check online for exact requirements for your intended programme of study. For general guidance on references, visit: www.ed.ac.uk/postgraduate/references

Deadlines
Some programmes have application deadlines. Please check online for details. For all other programmes, you are encouraged to apply no later than one month prior to entry to ensure there is sufficient time to process your application. However, earlier application is recommended, particularly where there is a high demand for places or when a visa will be required. Should you wish to submit a late application, please contact us for guidance. If you are applying for funding, in most cases you will need an offer to study with us before you can make your funding application.

English language requirements
Students whose first language is not English must show evidence of one of the qualifications below.

Leading Major Programmes
- IELTS Academic: total 7.0 (at least 6.0 in each module).
- TOEFL-IBT: total 100 (at least 20 in each module).
- IELTS A1: total 67 (at least 56 in each module of the Communicative Skills sections; the Enabling Skills sections are not considered).
- CAE and CPE: total 185 (at least 169 in each module).
- Trinity ISE: ISE III (with a pass in all four components).

All other programmes
- IELTS Academic: total 6.5 (at least 6.0 in each module).
- TOEFL-IBT: total 92 (at least 20 in each module).
- PTI(A): total 61 (at least 56 in each of the Communicative Skills sections).
- CAE and CPE: total 176 (at least 169 in each module).
- Trinity ISE: ISE II (with distinctions in all four components).

Please note:
- English language requirements can be affected by government policy so please ensure you visit our degree finder to check the latest requirements for your programme: www.ed.ac.uk/postgraduate/degrees
- Your English language certificate must be no more than three years old at the beginning of your programme, unless you are using an English language test such as IELTS in which case it must be no more than two years old.
- We also accept recent degree-level study that was taught and assessed in English in a majority English-speaking country (as defined by UK Visas & Immigration), or at a university in a non-majority English-speaking country which has specifically been approved by the University of Edinburgh’s Admissions Qualifications Group. A list of approved universities is published online. The award date must be no more than three years prior to the start date of the programme.

- We do not require you to take an English language test before you apply. Abbreviations: IELTS – International English Language Testing System; TOEFL-IBT – Test of English as a Foreign Language Internet-based Test; PTI(A) – Pearson Test of English (Academic); CAE – Certificate of Proficiency in English; CPE – Certificate of Advanced English; Trinity ISE – Integrated Skills in English.

Tuition fees
The following table provides an overview of indicative fee levels for programmes commencing in 2019.

Please note:
- International students starting full-time taught programmes of study lasting more than one year will be charged a fixed annual fee.
- All other students on full-time and part-time programmes of study lasting more than one year should be aware that annual tuition fees are subject to revision and are typically increased by approximately five per cent per annum. This annual increase should be taken into account when you are applying for a programme.
- In addition to tuition fees, your programme may be subject to an application fee and additional costs/programme costs may apply. Please check the latest programme information online.

Asylum seeker tuition fee status and scholarship
Information for applicants seeking asylum from within the United Kingdom, who wish to commence a programme of study at the University in 2019, is available online. This includes our tuition fee rates and scholarship opportunities: www.ed.ac.uk/student-funding/asylum

Tuition fees for EU students
EU students enrolling in the 2019/20 academic year will be admitted as Scottish/ EU fee status students. Taught masters students will be eligible for the same tuition support as Scottish domiciled students from the Student Awards Agency Scotland (SAAS).

* Figure shown is the 2018/19 fee level
All other fees quoted are indicative of 2019/20 fee levels. Because these figures are indicative, it is important you check online before you apply and check the up-to-date fee level that will apply to your specific programme: www.ed.ac.uk/student-funding/tuition-fees/postgraduate
A large number of scholarships, loans and other funding schemes are available for your postgraduate studies. For further information on applications and eligibility, please visit: www.ed.ac.uk/student-funding/postgraduate

Awards are offered by the School of Engineering, the College of Science & Engineering, the University of Edinburgh, the Scottish, UK and international governments and many funding bodies.

Here we list a selection of potential sources of financial support for postgraduate students applying to the School of Engineering. This list was correct at the time of printing but please check the full and up to date range online (see above).

**Funding**

**Tuition fee discounts**

We offer a 10 per cent discount on postgraduate fees for all alumni who have graduated with an undergraduate degree from the University. We also offer a 10 per cent discount for international graduates who spent at least one semester at the University of Edinburgh as a visiting undergraduate. www.ed.ac.uk/student-funding/discounts

**Scholarships at the University of Edinburgh**

- **Beit Trust**
  - Beit Trust and the University of Edinburgh Scholarship jointly fund postgraduate students from Malawi, Zambia and Zimbabwe to undertake a masters: www.beittrust.org.uk

- **China Scholarships Council/University of Edinburgh Scholarships (China)**
  - A number of scholarships for PhD study to candidates who are citizens and residents of China. Participating schools to be confirmed: www.ed.ac.uk/student-funding/china-ncouncil

- **Edinburgh Global Masters Scholarships**
  - A number of scholarships are available to international students for masters study: www.ed.ac.uk/student-funding/masters

- **Edinburgh Global Research Scholarships**
  - These scholarships are designed to attract high-quality international research students to the University: www.ed.ac.uk/student-funding/global-research

- **Edinburgh Principal’s Career Development Scholarships**
  - A number of scholarships, open to UK, EU and international PhD students: www.ed.ac.uk/student-funding/development

- **Enlightenment Scholarships**
  - The University is currently developing a new style of PhD scholarship to attract the best PhD applicants from around the world. These scholarships will provide funding for up to four years, the latest information, and for details on which Schools will be participating, please check: www.ed.ac.uk/student-funding/enlightenment

- **Engineering International Masters Scholarships**
  - Scholarships are available to overseas (outside EU) nationals accepted for full-time admission to an eligible taught postgraduate masters programme (advanced chemical engineering, electronics, electrical power engineering, signal processing and communications, structural and fire safety engineering, or sustainable energy systems): www.ed.ac.uk/student-funding/eng-masters

- **Highly Skilled Workforce Scholarships**
  - A number of scholarships are available to UK nationals permanently domiciled in Scotland, and to EU nationals domiciled either on mainland EU or in Scotland, who have been accepted on an eligible full- or part-time masters programme. The scholarships, which are funded by the Scottish Funding Council and subject to annual confirmation, cover either the UK/EU tuition fee. At the time of printing, we are awaiting confirmation of these scholarships from the Scottish Government: www.ed.ac.uk/student-funding/highly-workforce

- **Julius Nyerere Masters Scholarships (Tanzania)**
  - One scholarship is available to citizens of Tanzania who are normally resident in Tanzania who are accepted on a full-time masters programme: www.ed.ac.uk/student-funding/nyerere

- **Kenneth Denbigh Scholarship**
  - Five scholarships are available to top MSc Advanced Chemical Engineering applicants from any country: www.ed.ac.uk/student-funding/denbigh

- **MasterCard Foundation Scholars Programme (Africa)**
  - A number of scholarships for applicants who are residents and citizens of a Sub-Saharan African country will be available for eligible masters programmes. The scholarships cover full tuition fees and expenses for one country and maintenance for African students with five educational opportunities: www.ed.ac.uk/student-funding/mastercard

Research council awards

Research councils offer awards to masters and PhD students in most of the Schools within the University of Edinburgh. All postgraduate students must be confirmed in the University, through your School or College office. Awards can be made for both taught and research programmes.

- **Chile**

- **Colombia**
  - Administrative Department of Science, Technology and Innovation (Colciencias): www.colciencias.gov.co

- **Ecuador**
  - Secretaria Nacional de Educacion Superior, Ciencia y Tecnologia (SENESCYT): www.edu.ec

- **Iraq**
  - Ministry of Higher Education and Scientific Research: www.iraqculturalattache.org.uk

- **Mexico**
  - National Council of Science and Technology of the United Mexican States (CONACYT): www.conacyt.mx

- **Pakistan**

Loans available for study at the University of Edinburgh

The University of Edinburgh is a participating institution in the following loans programmes, meaning we certify your student status and can help with the application process.

- **The Canada Student Loans Program**
  - The University is eligible to certify Canadian student loan applications: www.ed.ac.uk/student-funding/canadian-loans

- **Erasmus+**
  - The Erasmus+ Master Loan helps masters students with their living and tuition costs when studying in an Erasmus country other than where they live or where they took their first degree. For more information: https://erasmusplus.org.uk/master-loan

- **Postgraduate Doctoral Loans England**
  - Student Finance England offers postgraduate loans for doctoral study, payable to eligible students and divided equally across each year of the doctoral programme: www.gov.uk/doktoral-loan/eligibility

- **Postgraduate Doctoral Loans Wales**
  - Student Finance Wales offers loans for postgraduate doctoral study, payable to eligible students and divided equally across each year of the doctoral programme: www.studentfinancewales.co.uk/postgraduate-loans

- **Postgraduate Doctoral Loans Scotland**
  - Student Finance offers loans for postgraduate doctoral study, payable to eligible students and divided equally across each year of the doctoral programme: www.gov.scot/student-funding/postgraduate-doctoral-loan.aspx

- **Postgraduate Loans (PGL) England**
  - Student Finance England offers postgraduate loans for taught and research masters programmes, payable to eligible students: www.gov.uk/postgraduate-loan

- **Postgraduate Loans (PGL) Northern Ireland**
  - Student FinanceNorthern Ireland offers a tuition fee loan for taught and research programmes, at certificate, diploma, and masters level, which will be paid directly to the University: www.studentfinance.ni.co.uk

- **Postgraduate Loans (SAAS) Scotland and EU**
  - The University Offers Scotland and EU funding through the Scottish Government SAAS. SAAS will be directly paid to the University. Up to three years of funding is available for full-time students.

- **Postgraduate Loans (PGL) Wales**
  - Student Finance Wales offers eligible students postgraduate loans for taught and research masters programmes: www.studentfinancewales.co.uk

- **US Student Loans**
  - The University is eligible to certify loan applications for US loan students. Full details on eligibility and how to apply can be found online: www.ed.ac.uk/student-funding/us-loans

**Other sources of funding**

The following lists scholarships and support schemes available to students from particular countries who meet specific eligibility criteria.

- **Chevening Scholarships**
  - A number of full and partial funding scholarships are available to one-year masters students: www.chevening.org

- **Commonwealth Scholarships**
  - Scholarships available to students who are resident in any Commonwealth country, other than the UK: www.dfid.gov.uk/csc

- **Marshall Scholarships (USA)**
  - Scholarships available to outstanding US students wishing to study at any UK university for at least two years: www.marshallscholarship.org

- **Scotland’s Saltire Scholarships**
  - A number of scholarships open to students who are citizens permanently and ordinarily resident in Canada, China, India, Japan, Pakistan and the USA for one year of masters study: www.ed.ac.uk/student-funding/saltire

Key:
- Taught masters programmes
- Masters by Research programmes
- Research programmes
The School of Engineering is based at the Sanderson Building on the King’s Buildings campus. The campus is around two miles from Edinburgh city centre and is well served by buses, including a free University shuttle service during semester time.

We are here!
The School of Engineering (Sanderson Building)
On 23 June 2016 the UK electorate voted in a national referendum to leave the European Union. At the time of going to print, there was no immediate, material change known that would impact on applicants for 2019 entry. However we recommend that you check online for the latest information before you apply: www.ed.ac.uk/news/eu

The University’s standard terms and conditions will form an essential part of any contract between the University of Edinburgh and any student offered a place here. Our full terms and conditions are available online: www.ed.ac.uk/student-recruitment/terms-conditions
