“Edinburgh isn’t so much a city, more a way of life … I doubt I’ll ever tire of exploring Edinburgh, on foot or in print.”

Ian Rankin
Best-selling author and alumnus
Influencing the world since 1583

For more than 400 years the University of Edinburgh has been changing the world. Our staff and students have explored space, won Nobel Prizes and revolutionised surgery. They’ve published era-defining books, run the country, made life-saving breakthroughs and laid the foundations to solve the mysteries of the universe.

Our distinguished alumni include NASA astronaut Piers Sellers, former MI5 Director-General Dame Stella Rimington, Olympians Sir Chris Hoy and Katherine Grainger and historical greats such as philosopher David Hume, suffragist Chrystal Macmillan, who founded the Women’s International League for Peace and Freedom, and physicist and mathematician James Clerk Maxwell.

International collaboration
An internationally renowned centre for academic excellence, we forge world-class collaborations with partners such as the California Institute of Technology (Caltech), Stanford University, the University of Melbourne, Peking University, the University of Delhi and the University of KwaZulu-Natal. As a member of the League of European Research Universities and the Coimbra Group, we link up with leading institutions across Europe.

Linking research and commerce
We were one of the first UK universities to develop commercial links with industry, government and the professions. Edinburgh Innovations promotes and commercialises our research excellence and can assist you in taking the first step to market, through collaborative research, licensing technology or consultancy.

Enhancing your career
We are committed to embedding employability in your University experience and have one of the Russell Group’s best track records for graduate employment. From volunteering schemes to our sector-leading careers service, we provide you with opportunities to develop your skills, knowledge and experience, giving you an edge in the competitive job market.

TOP 50
We’re consistently ranked one of the top 50 universities in the world. We’re 23rd in the 2018 QS World University Rankings.

4TH
We’re ranked fourth in the UK for research power, based on research quality and breadth.*

83%
The majority of our research – 83 per cent – is considered world leading or internationally excellent.*

32ND
We’re ranked 32nd in the world for the employability of our graduates.†

£268m
In 2015/16 we won £268 million in competitive research grants.

21
We’re associated with 21 Nobel Prize winners, including physicists Peter Higgs, Charles Barkla and Max Born, medical researcher Peter Doherty and biologist Sir Paul Nurse.

13TH
We’re ranked 13th in the world’s most international universities.‡ Students from two-thirds of the world’s countries study here.

* Research Excellence Framework (REF) 2014
† Latest Emerging Global Employability University Ranking
‡ Times Higher Education: The World’s Most International Universities 2017
Taught masters programmes

We offer a suite of taught master of science (MSc) programmes, each featuring compulsory and option courses that allow you to tailor your study to your particular interests and career goals.

www.ed.ac.uk/pg/107

Artificial Intelligence

MSc 1 yr FT (2-3 yrs PT available for UK/EU students)

Programme description

This MSc is taught at the UK’s longest established centre for artificial intelligence, which remains one of the best in the world. Our research draws on neuroscience, cognitive science, linguistics, computer science, mathematics, and philosophy to explain knowledge representation and reasoning, the study of brain processes, and artificial learning systems. Our team includes mathematicians, computer scientists, psychologists and linguists, who all work together to enhance understanding of the expanding field of cognitive science through formal study and experiments. It is this environment that makes Edinburgh progressively more attractive to employers, and this programme will enhance your standing with many types of employer.

Career opportunities

Recent graduates are now working as software developers and engineers, programmers and data analysts for companies such as HarperCollins, J.P. Morgan, Nokia, IBM, Amazon, Soundcloud and the Bank of England.

Entry requirements

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/ international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics or psychology, plus experience in computer programming. During your degree you must have completed the equivalent of 60 credits of mathematics that have typically covered the following subjects/topics: calculus (differentiation and integration), linear algebra (vectors and multi-dimensional matrices), discrete mathematics and mathematical reasoning (e.g. induction and reasoning, graph theoretic models, proof), and probability (concepts in discrete and continuous probabilities, Markov Chains etc).

English language requirements

See page 24. Fees and funding

For fees see page 24 and for funding information see page 26.

SPECIALIST AREAS

You will choose a ‘specialist area’ within the programme, which will provide recommendations on which courses to take. The specialist areas are cognitive science; natural language processing; and neural computation and neuromatics.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:

Informatics Research Review; Informatics Project Proposal; Introduction to Java Programming (for students who did not already meet the programme requirements for the taught master); Dissertation.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:

Advanced Vision; Algorithmic Game Theory and Its Applications; Computer Animation and Visualisation; Machine Learning and Pattern Recognition; Natural Language Understanding; Robotics; Science and Systems; Human-Computer Interaction; Reinforcement Learning; Accelerated Natural Language Processing; Machine Translation; Semantic Web Systems; Agent Based Systems;

**Data Science**

**MSC 1 yr FT (2-3 yrs PT available for UK/EU students)**

**Programme description**

Data science is the study of the computational principles, methods, and systems for extracting and structuring knowledge from data and the application and use of those principles. Large data sets are now generated by almost every activity in science, society, and commerce – ranging from molecular biology to social media, from sustainable energy to health care.

As an MSc Data Science student you will explore how to efficiently find patterns in these vast streams of data. Many research areas have tackled parts of this problem. Machine learning focuses on finding patterns and making predictions from data; ideas from algorithms and databases are required to build systems that scale to big data streams; and separate research areas have grown around different types of unstructured data such as text, images, sensor data, video, and speech.

**Programme structure**

You will follow two taught semesters of lectures, tutorials, practical work and written assignments. You will then complete a major individual research project and dissertation.

**English language requirements**

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics, psychology, or another quantitative discipline. You should have experience of computer programming equivalent to an introductory programming course and have completed the equivalent of 60 credits of mathematics during your degree that have typically covered the following subjects: calculus (differentiation and integration), linear algebra (vectors and multi-dimensional matrices), discrete mathematics and mathematical reasoning (e.g. induction and reasoning, graph theoretic models, proofs), and probability (concepts in discrete and continuous probabilities, Markov Chains etc).

**Career opportunities**

You will develop specialist, advanced skills in data science methods and their applications. You will gain practical experience and a thorough theoretical understanding of the field, making you attractive to a wide range of employers or preparing you for further academic study.

**Entry requirements**

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics, psychology, or another quantitative discipline. You should have experience of computer programming equivalent to an introductory programming course and have completed the equivalent of 60 credits of mathematics during your degree that have typically covered the following subjects: calculus (differentiation and integration), linear algebra (vectors and multi-dimensional matrices), discrete mathematics and mathematical reasoning (e.g. induction and reasoning, graph theoretic models, proofs), and probability (concepts in discrete and continuous probabilities, Markov Chains etc).

**Programme Contact** Informatics Teaching Organisation Tel +44 (0)131 650 5194 Email ito@inf.ed.ac.uk

**Design Informatics/Advanced Design Informatics**

**MSC 1 yr FT (Design Informatics) or 21 mths FT (Advanced Design Informatics)**

**Programme description**

Design Informatics combines data science with design thinking in a context of critical enquiry and speculation. We build a value-aware, reflective practice at the interface between data and society, combining theory and research with an open-ended process of making and hacking.

Our central premise is that data is a medium for design; by shaping data, we shape the world around us. Data science provides the groundwork for this, with design thinking shaping reflective research through design. You will use this in working with the internet of things and physical computing, machine learning, speech and language technology, usable privacy and security, data ethics, and blockchain technologies.

You will connect technology with society, health, architecture, fashion, bio-design, craft, finance, tourism, and a host of other real world contexts, through case studies, and individual and collaborative projects.

You will understand user experience in the wider sociocultural context, through an agile programme of hacking, making and materialising new products and services.

The courses Design with Data and Design Informatics Project give you the opportunity to work with an external partner, such as the Royal Bank of Scotland, Edinburgh City Council, or the National Museum of Scotland.

**Programme structure**

Throughout the programme, you will be working both individually and in teams of designers and computer scientists. Everyone will have to write code and everyone will have to make physical objects. Several courses, including your dissertation, will involve presenting the artefact, product, service, or interactive experience that you have created to the general public in a show.

**English language requirements**

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics, psychology, or another quantitative discipline. You should have experience of computer programming equivalent to an introductory programming course and have completed the equivalent of 60 credits of mathematics during your degree that have typically covered the following subjects: calculus (differentiation and integration), linear algebra (vectors and multi-dimensional matrices), discrete mathematics and mathematical reasoning (e.g. induction and reasoning, graph theoretic models, proofs), and probability (concepts in discrete and continuous probabilities, Markov Chains etc).

**Career opportunities**

You will develop specialist, advanced skills in data science methods and their applications. You will gain practical experience and a thorough theoretical understanding of the field, making you attractive to a wide range of employers or preparing you for further academic study.

**Entry requirements**

**Programme Contact** Informatics Teaching Organisation Tel +44 (0)131 650 5194 Email ito@inf.ed.ac.uk

**Informatics**

**MSC 1 yr FT (2-3 yrs PT available for UK/EU students)**

**Programme description**

Informatics is the study of how natural and artificial systems store, process and communicate information. Edinburgh has a long-standing tradition of world class research and teaching in informatics, a discipline central to a new enlightenment in scholarship and learning, and critical to the future development of society.

This is our most sought after taught MSc. We offer a wide choice of courses, spanning established disciplines such as cognitive and computer science as well as emerging areas such as bioinformatics. Informatics takes full advantage of our expertise in research and teaching, including specialisms unique to Edinburgh.

**Programme structure**

You will follow two taught semesters of lectures, tutorials, project work and written assignments, after which you will complete a major individual research project and dissertation.

**English language requirements**

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy, physics or psychology, plus experience in computer programming. During your degree you must have completed the equivalent of 60 credits of mathematics (please check online for recommended subjects/topics).

**Career opportunities**

Our graduates are highly valued by potential employers worldwide. Many go on to work in the technology industry as software engineers, IT consultants, programmers and developers, and may work with the suites of software that have become household names. Others go on to further study and research. Recent graduates are now employed by disrupters, lifestyle designers and analysts for companies including Airbus, Citigroup, NCR Corporation, BT and Skyscanner.

**Entry requirements**

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in informatics, artificial intelligence, cognitive science, computer science, electrical engineering, linguistics, mathematics, philosophy or psychology, plus experience in computer programming. During your degree you must have completed the equivalent of 60 credits of mathematics (please check online for recommended subjects/topics).

www.ed.ac.uk/studying/prospectus-request
High Performance Computing/High Performance Computing with Data Science

Programme description
You will study at EPCC, the UK’s leading supercomputing centre. EPCC is the major provider of high performance computing (HPC) training in Europe with an international reputation for excellence in HPC education and research. Our staff have a wealth of expertise across all areas of HPC, parallel programming technologies and data science. Our two MSc programmes have a strong practical focus and provide access to leading-edge HPC systems such as ARCHER, which is the UK’s largest, fastest and most powerful supercomputer, with more than 100,000 CPU cores.

MSc High Performance Computing
HPC is the use of powerful processors, networks and parallel supercomputers to tackle problems that are too computationally or data-intensive. You will learn leading-edge HPC technologies and skills to exploit the full potential of the world’s largest supercomputers and multicore processors. This is a well-established programme that has been successful in training generations of specialists in parallel programming. You can also choose option courses from elsewhere within the University, such as the School of Informatics or the School of Mathematics.

Career opportunities
Our graduates are employed across a range of commercial areas, for example software/applications development, petroleum engineering, finance and HPC support. Others have gone on to PhD research in fields that use HPC technologies, including astrophysics, biology, chemistry, geosciences, informatics and materials science.

Industry-based projects
Through EPCC’s strong links with industry, we also offer you the opportunity to undertake your dissertation project with one of a wide range of local companies.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a relevant subject. You must also be a competent programmer, for example in C, C++, Python, Fortran, or Java.

English language requirements
See page 24.

Fees and funding
For fees please see page 24 and for funding information see page 26. EPCC offers a minimum of two John Fisher HPC Masters Scholarships, open to all nationalities. Each scholarship has a value equivalent to half of your fees for one academic year. More information: www.epcc.ed.ac.uk/msc/fees-funding

Contact MSc Administrator
Tel +44 (0)131 651 7076
Email msc@epcc.ed.ac.uk

Please note the MSc programmes in High Performance Computing (HPC) and HPC with Data Science, taught and administered by EPCC and previously offered under the School of Physics & Astronomy, are now offered under the School of Informatics.

TAUGHT COURSES INCLUDE:
- HPC Architectures
- HPC Ecosystem
- Message-Passing Programming
- Programming Skills: Project Preparation
- Software Development
- Threaded Programming
- Dissertation
- Advanced Parallel Programming
- Data Analytics with High Performance Computing
- Fundamentals of Data Management
- Parallel Design Patterns
- Parallel Numerical Algorithms
- Parallel Programming Languages
- Performance Programming

You can also choose option courses from elsewhere within the University, such as the School of Informatics or the School of Mathematics.

Programme description
Demand is growing for highly qualified data specialists across the sciences, medicine, arts and humanities. The aim of this unique, modular, online learning programme is to fully equip tomorrow’s data professionals, offering different entry points into the world of data science, and enhance existing career paths with an additional dimension in data science. You will develop a strong foundation of knowledge of specific disciplines as well as direction in technology, concentrating on the practical application of data research in the real world.

Programme structure
For MSc, you must complete Practical Introduction to Data Science, 100 credits from the courses listed below, and a dissertation. For MSc (Medical Informatics specialism), you must complete Medical Informatics, Research and Evaluation in eHealth, 90 credits from the courses listed below, and a dissertation. For PgDip, you must complete Practical Introduction to Data Science and 100 credits from the courses listed below. For PgCert, you must complete Practical Introduction to Data Science and 40 credits from the courses listed below. For Postgraduate Professional Development (PgProfDev) you may choose a maximum of 50 credits from the courses listed below.

Data Science, Technology & Innovation

“EPCC’s MSc in High Performance Computing has always been a leader in its field. Coupling it to data science responds to the huge increase in demand for graduates with both HPC and data skills from both science and business.”

Professor Mark Parsons, Executive Director, EPCC

“Data Science, Technology & Innovation postgraduate programmes build on Edinburgh’s strength in data science, interdisciplinary and innovation. They offer a unique combination of technical depth, applicable skills and exploitable knowledge. These online learning programmes are accessible to a wide range of backgrounds. Offered part-time, intermittent, they are an excellent route to re-skilling or upskilling.”

Professor David Robertson, Head of the College of Science & Engineering

The University of Edinburgh Informatics Postgraduate Opportunities 2018
Research at the School of Informatics

We topped the UK rankings for the Research Excellence Framework (REF) 2014, producing more world leading and internationally excellent research in computer science and informatics than any of our competitors. We hope the research you undertake will become part of our future contribution.

The research areas we offer reflect our leadership in the field. Our vast research portfolio is carried out across six institutes: communities of research staff and students with access to specialist facilities and funding. The research programmes we offer follow the same institute grouping, giving you the UK’s greatest choice in core and multidisciplinary areas.

Research options

The most common research programme is the three-year Doctor of Philosophy (PhD). You will embark upon original research under supervision and present the results in a written thesis and oral examination.

The Master of Philosophy (MPhil) requires at least two years of supervised research study. It would usually include taught courses in your first year of study and more independent research in your second year.

The MSc by Research is an opportunity to gain research skills by undertaking independent study related to the School’s ongoing research programme, over a period of one year.

Entry requirements

A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in an appropriate subject. Please check the specific entry requirements for your programme online before applying.

EPSRC Centres for Doctoral Training

The University won a share of a £350 million investment in UK science and engineering postgraduate training by the Engineering and Physical Sciences Research Council (EPSRC).

The School of Informatics hosts two Centres for Doctoral Training, one in Data Science and one in Pervasive Parallelism, and is also a partner in the Centre in Robotics and Autonomous Systems in collaboration with Heriot-Watt University.

These four-year (1+3) programmes combine a training year (MSc by Research) with a three-year PhD. For the latest information, see below and: www.ed.ac.uk/informatics/postgraduate/cdts.

Case study: Edinburgh’s research with impact

Enabling rural communities to access high-speed broadband

As a direct result of the Edinburgh team’s research, some of Scotland’s most remote communities are now enjoying superfast broadband for the first time.

The head of BT Scotland had expressed the opinion that mesh networks like Tegola were not robust, however experience has shown otherwise. In 2011 Tegola was successfully used for emergency medical services when a lightning strike knocked out the telephones to a wider area. As a direct result of the Edinburgh team’s research, some of Scotland’s most remote communities are now enjoying superfaster broadband for the first time. For some it’s their first connection to the online world. Tegola has become a replicable model for community-driven local access network deployments in Scotland. It has also inspired research into tools, systems and techniques to aid communities in deploying and maintaining similar rural networks.

Research opportunities

www.epcc.ed.ac.uk
www.ed.ac.uk/pg/855

Edinburgh Parallel Computing Centre (EPCC)

EPCC offers the opportunity to study for a PhD in topics related to high performance computing.

Research environment

Founded in 1990, EPCC is one of the leading supercomputing centres in Europe and a major provider of training in high performance computing. EPCC’s expertise includes advanced research, technology transfer, commercial consultancy and the provision of supercomputer services to academia and business.

EPCC hosts the ARCHER (Advanced Research Computing High End Resource) national supercomputing service. EPCC has a team of experienced consultants and software engineers who have a wealth of expertise in the latest technologies. Our computing research covers: software for future HPC systems, modelling and simulation, performance characterisation and benchmarking, and developing a pan-European HPC service.

We are working on several big data research projects, ranging from earthquake prediction and astronomical data analysis to the development of international data infrastructure for managing today’s immense growth in data generation.

Meanwhile our software specialists have an impressive portfolio of projects, including many industrial applications. We remain at the forefront of the field, for example through our leadership of the UK’s Software Sustainability Institute, ensuring that today’s new software continues to be improved and supported in the future.

Pathway to progress

Graduates from EPCC have found rewarding employment in the computing industry, universities and government organisations.

EPSRC Centre for Doctoral Training in Data Science

1+3 Programme: MSc by Research followed by PhD – 4 yrs FT

Large data sets are now generated by almost every activity in science, society and commerce. This EPSRC sponsored programme tackles the question: how can we efficiently find patterns in these vast streams of data? The applications are limited only by your imagination. Research in the Centre focuses on developing new techniques for analysing, querying, and managing data motivated by cutting-edge applications.

Research environment

Many research areas are converging on the problem of data science, including machine learning, artificial intelligence, databases, data management, statistics, optimization, theoretical computer science, natural language processing, speech processing, and computer vision.

Our programme will allow you to specialise and perform advanced research in one of these areas, supervised by one of our 58 world-renowned researchers. Moreover, we believe that key research insights can be gained by working across the boundaries of conventional groupings. The first year of our programme will prepare you by combining research work with coursework that develops your breadth and depth in data science, and that informs your choice of research topic.

Tangible commercial links

You will benefit from interacting with a group of more than 40 leading industrial and public sector partners, including Amazon, Apple, Google, IBM, and Microsoft. The Centre’s partners co-fund studentships, host internships and attend the CDT’s networking events. This will ensure your research is informed by real world case studies and will provide a source of diverse internship opportunities.

Going further

You will be part of a new generation of data scientists, with the technical skills and interdisciplinary awareness to become R&D leaders in this emerging area. Both industry-leading companies and top-tier universities are extremely keen to recruit graduates with these skills.

EPSRC Centre for Doctoral Training in Pervasive Parallelism

1+3 Programme: MSc by Research followed by PhD – 4 yrs FT

Driven by performance and energy constraints, parallelism is now crucial to all layers of the computing infrastructure, from smartphones to globally distributed systems. This EPSRC sponsored programme tackles the many urgent interconnected problems raised by parallel systems. How do we design programming languages for such systems? How should the architecture be structured? Which theories, tools and methodologies will allow us to reason about the behaviour of this new hardware and software?

Research environment

Our supervisors offer internationally leading expertise across all aspects of the pervasive parallelism challenge. These include parallel programming, wireless and mobile networking, reasoning about interaction, models of concurrent computation, energy efficient computing, systems architecture, and performance modelling. You will have access to state-of-the-art facilities, from on-chip accelerators including GPUs and multicore CPUs to supercomputer scale systems. The involvement of the Edinburgh Parallel Computing Centre (EPCC), one of Europe’s leading supercomputing centres, provides a globally impressive infrastructure for use in the training of our students.

Tangible commercial links

You will have opportunities to take up internships with leading companies in this area, including ARM, Intel, IBM and Microsoft, and to participate in our industrial engagement programme, exchanging ideas and challenges with our sponsor companies at student conferences, workshops and networking events.

Going further

We intend for our graduates to become the research leaders in both academia and industry, whose work will lead the way into the era of mainstream parallelism. This vision is shared by our industrial supporters who have expressed their need for highly qualified candidates to fill roles in this area. We also have outstanding support for entrepreneurial initiatives through Informatics Ventures.

www.ed.ac.uk/pg/prospectus-request

The University of Edinburgh Informatics Postgraduate Opportunities 2018
"I decided to study at Edinburgh, not just because of the research facilities offered and the University’s prestige as a major educational and scientific development centre, but also because of the great atmosphere in the School of Informatics. Being in an environment that stimulates collaboration and encourages discussion is a great catalyst and a source of inspiration."

Andreea Radulescu, PhD Artificial Intelligence
ICSA: Computer Architecture, Compilation & Systems Software, Networks & Communication

PhD 3 yrs FT (6 yrs PT available for UK/EU students)
MPhil 2 yrs FT (4 yrs PT available for UK/EU students)
MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

The Institute for Computing System Architecture (ICSA) will provide you with academic resources and industry links that are among the best in the world. We’re home to the UK’s largest group of PhD researchers in the field, and host a Centre of Excellence in partnership with ARM, the world’s largest microprocessor intellectual property provider. We’re also a member of the European Network of Excellence on High Performance and Embedded Architecture and Compilation.

Research environment
Our students see their studies as a launch pad for their careers, and many have established themselves as world-class researchers and developers. By joining their ranks, you’ll be able to make your mark on the next generation of technological innovations. Currently, research is focused on the areas of compilers and architectures, parallel computing (see also our CDT programme in Pervasive Parallelism on page 10), wireless networking and processor-automated synthesis by iterative analysis. Our wireless communication group is particularly strong, and currently working on expanding wireless reach within Scotland. While the scope for research is wide, each area is underpinned by our fundamental aims: to extend understanding of existing systems; to improve current systems; and to develop new architecture and engineering methods.

Encouraging success
You’ll be supported in your research by award-winning academic staff – including four Fellows of the Royal Academy of Engineering. They and other research colleagues have contributed to an extensive publications portfolio, featuring some of the most prestigious publications in the field. You’ll graduate with more than an intensive knowledge of your field; you’ll also have established academic and personal links that will last a lifetime.

Career opportunities
Academic and business employers actively recruit ICSA graduates, many of whom are now designing the next generation of products for major software developers, or taking the lead in other entrepreneurial ventures.

ILCC: Language Processing, Speech Technology, Information Retrieval, Cognition

PhD 3 yrs FT (6 yrs PT available for UK/EU students)
MPhil 2 yrs FT (4 yrs PT available for UK/EU students)
MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

Strongly interdisciplinary in nature, the Institute for Language, Cognition and Communication (ILCC) is dedicated to both basic and applied research in the computational study of language, communication, and cognition, in both humans and machines. As technology focuses increasingly on language-based communication tools, research into the automation of language processing has become vital. ILCC offers you the broadest research scope in the UK, and a strong computational focus.

Research environment
Our primary areas of research are: natural language processing and computational linguistics; spoken language processing; dialogue and multimodal interaction; information extraction, retrieval and presentation; computational theories of human cognition; and educational and assistive technology.

Much of our research is applied to software development, in areas as diverse as social media, assisted living, gaming and education.

Cross-disciplinary culture
You may find yourself working closely with other schools within the University, particularly the School of Philosophy, Psychology & Language Sciences. Many of our researchers are involved in two cross-disciplinary research centres: the Human Communication Research Centre and the Centre for Speech Technology Research.

Career opportunities
While many of our graduates pursue an academic career, others find their skills are highly sought after in the technology industry. A number of our students undertake internships with large UK and international software developers, while others take up positions with major social media companies.

English language requirements
See page 24.

Fees and funding
For fees see page 24 and for funding information see page 26.
“I knew I wanted to do a PhD in robotics and was very happy to find that Edinburgh had a group specialising in this research, which I subsequently joined. The School of Informatics was truly inspiring and I quickly understood why it had such a renowned reputation.”

Mike Mangan, PhD Robotics graduate 2011
The Informatics Forum

About the School of Informatics

Informatics is the study of natural and engineered computational systems. It encompasses the academic disciplines of computer science, software engineering, artificial intelligence and cognitive science.

Making an impact

We lead the way in an exciting discipline that is central to a new enlightenment in scholarship and learning. Informatics is critical to the development of science, technology, culture and society. As a postgraduate student you will have the opportunity to make your own mark in the area that most interests and excites you.

Inspiring people

At the School of informatics you can join the world’s brightest students in a collaborative learning environment with our distinguished staff, many of whom are world leaders. Our academics include Fellows of the Royal Society, the Royal Society of Edinburgh and the Royal Academy of Engineering. We boast recent winners of the most prestigious awards in the field, including the Herbrand Award, the Blaise Pascal Medal and the Yangtze River Scholar award.

Exciting careers

Graduates from our programmes enjoy career success in a wide array of roles that shape our society, from developing the latest mobile technology to creating intelligent infrastructure. Many go on to work as project managers, researchers, software developers and consultants in the commercial sector (at firms such as Google, Amazon, Skyscanner or Adobe) or take up academic posts, often in Russell Group and US research universities such as MIT and Stanford. Some of our graduates have found success through start-up companies.

Facilities and resources

Our exceptional facilities have been built with the needs of innovative learning, teaching and research in mind. We provide comfortable office space and specialist research and teaching labs.

You’ll be based at the University’s Central Area campus, surrounded by lively venues, leisure facilities and parks and served well by public transport – not to mention the World Heritage attractions of one of the UK’s most beautiful capital cities.

The award-winning Informatics Forum is an international research facility for computing and related areas. It houses more than 400 research staff and students, providing office, meeting and social spaces. It also contains several robotics labs, an instrumented multimedia room, eye-tracking and motion capture systems, and a full recording studio among other research facilities. Its spectacular atrium plays host to many events, from industry showcases and student hackathons to major research conferences. Nearby state-of-the-art teaching facilities include computer and teaching labs with more than 250 machines, 24-hour access to IT facilities for students, and comprehensive support provided by dedicated computing staff.

An entrepreneurial focus

As well as academic importance, we recognise the commercial potential of our research. In recent years, we’ve helped to create more spin-out companies than any other UK institution (as judged by spinout.co.uk). Among our initiatives is Informatics Ventures, set up in 2008 to support globally ambitious software companies in Scotland and nurture a technology cluster to rival Boston, Pittsburgh, Kyoto and Silicon Valley.

Creative space

An exciting new venture for our School is our collaboration with Edinburgh College of Art, backed by the Scottish Funding Council. The Centre for Design Informatics allows the integration of product design with ideas from informatics. Designers work alongside informatics entrepreneurs to help build new products and services, including the next generation of social media tools.

Collections of the University

The University of Edinburgh has one of the world’s great collections, which has been growing ever since its foundation in 1583. Our collections include rare books, archives and manuscripts, art, historical musical instruments and a wide range of museum objects from geological specimens to anatomical models. If laid out end to end, we would have almost 60 kilometres of shelving and storage space devoted to our heritage material, from 1st-century Greek papyrus fragments to new works of sculpture. This is curated by specialist staff across 45 sites and used for our teaching and research and by the wider public community.

The Centre for Research Collections in the Main Library is the hub for all our collections, where specialist curators make them available for study, research and pleasure. Postgraduate students are welcome to study original objects and have made many important research discoveries while working on the archives. You will find an incredible range of material in our collections that is available nowhere else in the world.
Community

As a student at the School of Informatics, you’ll be studying with the UK’s largest group of informatics researchers, comprising almost 500 students and academic staff.

Working in such a large group of researchers and students opens up opportunities for collaboration and creative interaction. The atmosphere is one of community: we encourage students to mix and share their experiences and many of our subject areas invite a multidisciplinary approach. For example, current research in the School includes Human Communication, Digital Curation, Health Informatics, Synthetic and Systems Biology, and Learning Energy Systems.

Since 2013 the School has held an Athena Swan Silver Award, which recognises Informatics as a supportive environment for women in the area of Science, Technology, Engineering, Medicine and Mathematics (STEMM).

Sharing research

In addition to formal teaching, each research institute within the School regularly schedules seminars for all staff and students, where you can hear about cutting-edge research as it unfolds. The Informatics Forum is a vibrant meeting point for all sorts of groups, from the formal to the very informal – you can even play table tennis in the Forum itself. There are also numerous online resources and meeting points, from the School’s Facebook page to wikis and virtual cafes.

Support

The School’s Student Services team offers a first point of contact to all our taught and research students for help and information to support all aspects of your student life, from admissions and funding to graduations and career opportunities.

Social networking

Informatics students enjoy a lively social life, and can take part in many student-organised activities. The University’s computer society, CompSoc, organises events ranging from games to ice skating and there are regular sports tournaments and tech meet-ups. There is also Hoppers, a social group for women in technology.

Employability and graduate attributes

Computers continue to play a vital role in nearly every aspect of everyday living and in a diverse range of sectors – from the entertainment industry to the environment. Some of the most dynamic and lucrative opportunities are available to those who are skilled in computing, software and information systems.

All our postgraduate students have access to an excellent range of services to help you make the most of your time with us, whether you’re looking to enhance your career, pursue research or start your own business.

Start-up assistance

The School of Informatics is particularly supportive of commercialisation and we have a strong track record in developing spin out companies. For those who are entrepreneurially minded, we provide training and mentoring and host special events to help our students and staff attract venture capital funding for their start-ups. Informatics Ventures is a dedicated knowledge exchange programme which aims to foster innovation and entrepreneurship through regular workshops, seminars and other events. For more information see: www.informatics-ventures.com

Institute for Academic Development

All postgraduate students can benefit from our Institute for Academic Development (IAD), which provides information, events and courses to develop the skills you will need throughout your studies and in the future. IAD events also offer the perfect opportunity to meet and network with other postgraduates from across the University.

Further information is available online: www.ed.ac.uk/iad/postgraduates

For taught postgraduates, IAD provides a popular study-related and transferrable skills support programme. It is designed to help you settle into postgraduate life, succeed during your studies and move confidently to the next stage of your career. We offer on-campus and online workshops and one-to-one study skills consultations, plus online advice and learning materials. Workshops and learning resources cover key topics tailored to different academic stages, including getting started with your studies; critical reading, writing and thinking; managing your exams and planning for and writing up your dissertation.

IAD also provides a comprehensive programme of transferrable skills training, resources and support for researchers completing a doctorate. The workshop programme is designed to help you successfully prepare for the various milestones of your PhD, from getting started with your research, to writing up and preparing for the viva. Workshops cover topics such as writing skills, reference management tools, statistics, preparing for conferences, delivering presentations, time and project management, and personal development. IAD also offers online resources and planning tools to help get your research started, plus support for tutoring and demonstrating, and research public engagement and communication.

Careers Service

Our Careers Service plays an essential part in your wider student experience at the University, offering a range of tailored careers and personal development guidance and support. We support you to recognise the wealth of possibilities ahead, while at university and after graduation, helping you explore new avenues, tap into your talents and build your employability with confidence and enthusiasm.

We provide specialist support for postgraduate students. From exploring career options to making decisions, from CV writing to interview practice, from Employ. ed internships to graduate posts and from careers fairs to postgraduate alumni events, we help you prepare for the future.

We sustain and continually develop links with employers from all industries and employment sectors, from the world’s top recruiters to small enterprises based here in Edinburgh. Our employer team provides a programme of opportunities for you to meet employers on-campus and virtually, and advertises a wide range of part-time and graduate jobs.

More information: www.ed.ac.uk/careers/postgrad

Connect.ed

Edinburgh encourages its alumni to stay in touch with current students who share an academic background or are interested in a similar career path. Connect.ed is a networking system run by the Careers Service that provides an informal and confidential opportunity for alumni to share their occupational knowledge and experience with current students, who can contact them for advice and guidance on their future career.

More information: www.ed.ac.uk/careers/connected

Backing bright ideas

LAUNCH.ed is the University’s award-winning programme for student entrepreneurs. Each year, LAUNCH.ed works with hundreds of students to assess their ideas and develop their business skills and helps many start their businesses. We have helped Edinburgh students and alumni launch almost 100 new businesses in the last three years, ranging from language tuition to robotics companies.

More information: www.LAUNCH.ed.ac.uk
Applications and fees

We have an online application process for all postgraduate programmes. It’s a straightforward system with full instructions, including details of any supporting documentation you need to submit.

When applying, you will set up an account, which lets you save your application and continue at another time.

Full guidance on our application system is available at: www.ed.ac.uk/postgraduate/applying

General requirements
Our usual entrance requirement for postgraduate study is a UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry). This will typically be in an area of informatics, such as artificial intelligence, cognitive science or computer science. You may also be considered if your degree is in one of the following areas: engineering, linguistics, mathematics, philosophy, physics or psychology. You will need to have experience in computer programming.

You will need to meet the University’s language requirements (see below).

Entry requirements for individual programmes can vary, so check the details for the specific programme you wish to apply for online: www.ed.ac.uk/postgraduate/degrees

References
For applications to taught programmes, the normal requirement is one reference, although an additional reference may be requested in individual cases. For applications to research programmes, two references are required. You should check the entry online for exact requirements for your intended programme of study. For general guidance on references, visit: www.ed.ac.uk/postgraduate/references

Deadlines
Taught MSc programmes
Some programmes have application deadlines. Please check the individual programme entry online for details. For all other programmes, you are encouraged to apply no later than one month prior to entry to ensure there is sufficient time to process your application. However, earlier application is recommended, particularly where there is a high demand for places or when a visa will be required. Should you wish to submit a late application, please contact us for guidance. If you are applying for funding, in most cases you will need an offer to study with us before you can make your funding application.

Research programmes
Our admissions process for research students is organised into two rounds, which are aligned with the timing of the main funding decisions. For full consideration for all PhD scholarships, including those available to international and EU students, you should apply for admission by mid-December. The second deadline is the end of March, connected to the main funding decisions mostly affecting UK students. It is possible for admissions decisions to be made at other times of the year, especially if you have your own or external sources of funding.

English language requirements
Students whose first language is not English must show evidence of one of the qualifications below:

- IELTS Academic: total 6.5 (at least 6.0 in each module).
- TOEFL iBT: total 92 (at least 20 in each module).
- PTE Academic: total 61 (at least 56 in each of the Communicative Skills sections).
- CAE and CPE: total 176 (at least 169 in each module).
- Trinity ISE: ISE II (with distinctions in all four components).

Please note:
- English language requirements can be affected by government policy so please ensure you visit our degree finder to check the latest requirements for your programme: www.ed.ac.uk/postgraduate/degrees
- Your English language certificate must be no more than two years old at the beginning of your programme.
- We also accept recent degree-level study in a majority English-speaking country that was taught and assessed in English.

Abbreviations: IELTS − International English Language Testing System; TOEFL iBT − Test of English as a Foreign Language; Internet-Based Test; PTE Academic − Pearson Test of English [Academic]; CAE − Certificate of Proficiency in English; CPE − Certificate in Advanced English; Trinity ISE − Integrated Skills in English.

Funding

A large number of scholarships, loans and other funding schemes are available for your postgraduate studies. It is only possible to show a small selection in print. To see the full range, please visit: www.ed.ac.uk/student-funding/postgraduate

Scholarships at the University of Edinburgh

- **Beit Trust**
  - Beit Trust and the University of Edinburgh Scholarships jointly fund postgraduate students from Malawi, Zambia and Zimbabwe to undertake a master's: www.beittrust.org.uk
- **Edinburgh Global Masters Scholarships**
  - A number of scholarships are available to international students for masters study: www.ed.ac.uk/student-funding/masters
- **Edinburgh Global Research Scholarships**
  - These scholarships are designed to attract high-quality international research students to the University: www.ed.ac.uk/student-funding/global-research
- **Edinburgh Principal’s Career Development Scholarships**
  - A number of scholarships, open to UK, EU and international PhD students: www.ed.ac.uk/student-funding/development
- **Enlightenment Scholarships**
  - The University is currently developing a new style of PhD scholarship to attract the best PhD applicants from around the world. These scholarships will provide funding for up to four years. For the latest information, and for details on which Schools will be participating, please check: www.ed.ac.uk/student-funding/enlightenment
- **Edinburgh Syrian Postgraduate Scholarships**
  - A number of scholarships are available to postgraduate students from Syria studying a full-time one-year masters: www.ed.ac.uk/student-funding/postgraduate/syria
- **EPSRC Centre for Doctoral Training Scholarships**
  - Combined MSc/PhD programmes in our EPSRC Centres for Doctoral Training offer a number of fully-funded places for eligible students: www.ed.ac.uk/informatics/postgraduate/fees-research-scholarships
- **Google European Doctoral Fellowship**
  - Google runs an international competition for these scholarships. Successful applicants receive full tuition fees, a stipend and research expenses: http://research.google.com/education/relations/docs/fellowships_europe.html
- **John Fisher HPC Masters Scholarships**
  - EPCC offers a minimum of two scholarships for MSc High Performance Computing (High Performance Computing with Data Science, open to all nationalities. Each scholarship has a value equivalent to half of your fees for one academic year: www.ed.ac.uk/student-funding/masters-hpc
- **Julius Nyerere Masters Scholarships (Tanzania)**
  - One scholarship is available to citizens of Tanzania who are normally resident in Tanzania who are accepted on a full-time masters programme: www.ed.ac.uk/student-funding/nyerere
- **Microsoft Research European PhD Scholarships**
  - Microsoft Research runs an international competition for these scholarships, which are available to students from Europe, the Middle East and Africa: http://research.microsoft.com/en-us/collaboration/globalapply-europe.aspx
- **School of Informatics Masters Scholarships**
  - A number of scholarships are available for masters study to students who are accepted for admission on a full-time eligible programme: www.ed.ac.uk/informatics/postgraduate/fees/msc-scholarship
- **School of Informatics Scholarships**
  - A number of scholarships available each year to new postgraduate researchers: www.ed.ac.uk/student-funding/postgraduate/informatics/phd-funding

Research council awards

Research councils offer awards to masters, MPhil and PhD students in most of the Schools within the University of Edinburgh. All studentship applications to the research councils must be made through the University, through your School or College office. Awards can be made for both taught and research programmes.

Normally only those UK/EU students who have been resident in the UK for the preceding three years are eligible for a full award. For some awards, candidates who are EU nationals and are resident in the UK may be eligible for a fees-only award. The UK Government has confirmed that EU postgraduate research students commencing their studies in 2018/19 will retain their fee status and eligibility for research council support for the duration of their programme: www.ed.ac.uk/student-funding/research-councils

The University also offers a number of scholarships in partnership with the following overseas government agencies:

- **Chile**
- **Colombia**
  - Administrative Department of Science, Technology and Innovation (Colciencias): www.colciencias.gov.co
- **Ecuador**
  - Secretaria Nacional de Educacion Superior, Ciencia y Tecnologia (SENESCYT): www.educacionsuperior.gob.ec
- **Iraq**
  - Ministry of Higher Education and Scientific Research: www.iraqculturalattaché.org.uk
- **Mexico**
  - National Council of Science and Technology of the United Mexican States (CONACYT): www.conacyt.mx
  - Banco de Mexico and the Banco de Mexico’s FIDERH trust (FIDERH): www.fiderh.org.mx
  - Fundacion Mexicana para la Educacion, la Tecnologia y la Ciencia (FUNED): www.funedms.org
- **Pakistan**

Loans available for study at the University of Edinburgh

The University of Edinburgh is a participating institution in the following loans programmes, meaning we certify your student status and can help with the application process.

- **The Canada Student Loans Program**
  - The University is eligible to certify Canadian student loan applications: www.ed.ac.uk/student-funding/canadian-loans
- **Erasmus+**
  - The Erasmus+ Master Loan helps masters students with their living and tuition costs when studying in an Erasmus+ country other than where they live or where they took their first degree. For more information: https://erasmusplus.org.uk/master-loan
- **Postgraduate Loans (PGL) England**
  - Student Finance England offers postgraduate loans for taught and research masters programmes, payable to eligible students: www.gov.uk/postgraduate-loan
- **Postgraduate Loans (PGL) Northern Ireland**
  - Student Finance Northern Ireland offers a tuition fee loan for taught and research programmes, at certificate, diploma, and masters level, which will be paid directly to the University: www.studentfinance.ni.co.uk
- **Postgraduate Loans (SAAS) Scotland and EU**
  - The Scottish Government Agency Scotland offers tuition fee loans for taught diploma and masters programmes which will be paid directly to the University. Full-time students resident in Scotland can also apply for a non-income assessed living cost loan: www.saas.gov.uk

Postgraduate Loans (PGL) Wales

Student Finance Wales offers eligible students postgraduate loans for taught and research masters programmes: www.studentfinancewales.co.uk

- **US Student Loans**
  - The University is eligible to certify loan applications for US loan students. Full details on eligibility and how to apply can be found online: www.ed.ac.uk/student-funding/us-loans

Other sources of funding

The following are examples of the many scholarships and support schemes available to students from particular countries who meet certain eligibility criteria.

- **Chevening Scholarships**
  - A number of partial and full funding scholarships are available to one-year masters students: www.chevening.org
- **Commonwealth Scholarships**
  - Scholarships available to students who are resident in any Commonwealth country, other than the UK: www.fidb.org.uk/coscauk
- **Marshall Scholarships (USA)**
  - Scholarships available to outstanding US students wishing to study at any UK university for at least two years: www.marshallscholarship.org
- **Scotland’s Saltire Scholarships**
  - A number of scholarships open to students who are citizens permanently and ordinarily resident in Canada, China, India, Pakistan and the USA for one year of masters study: www.ed.ac.uk/student-funding/saltire

“The Scottish Government’s initiative to attract international students through the Saltire Scholarship Scheme, as well as the University of Edinburgh’s support for international students, has helped provide me with an opportunity that I would never have conceived of prior to starting my studies at Edinburgh.”

Robert Starr, MSc High Performance Computing, Scotland’s Saltire Scholarship Funding
Informatics teaching, learning and research takes place in two buildings based at the University’s Central Area, a stone’s throw from city attractions and University amenities, such as the Main Library and the Centre for Sport and Exercise.

Contact us
