Online learning programmes

The University of Edinburgh is the largest provider of postgraduate online learning programmes in the Russell Group and our flexible, online learning master of science (MSc) programmes are making a difference to a new generation of postgraduate students around the world.

Edinburgh Medical School has been offering innovative postgraduate programmes online to medical and health-related professionals since 2005. Today there are 28 online programmes to choose from and our portfolio is expanding all the time. In addition to MSc programmes, we also offer Postgraduate Diploma (PgDip) and Postgraduate Certificate (PgCert) programmes. With more than 1,000 online students in our School, we take the delivery of teaching online as seriously as we do on campus. Every programme has an experienced team of programme director, coordinator and administrator, and each student has a personal tutor, so you will be fully supported in all aspects of your student experience.

The online, part-time format is particularly suited to students already in full or part-time employment or with other professional or personal commitments, and allows a flexible learning environment that can be adapted to suit individual needs.

You can choose to study at a time and in a place that suits you, saving relocation costs.

Our online learning technology is fully interactive and allows you to communicate with our highly qualified teaching staff from the comfort of your own home or workplace. We give you as much access to our staff as if you were here in Edinburgh. You will not only have access to Edinburgh’s excellent resources, but will also become part of a supportive online community, bringing together students and tutors from around the world and enabling you to have the ‘Edinburgh experience’ wherever you are in the world.

Many of our programmes have collaborative relationships with other academic and charitable organisations, giving you a unique opportunity to interact and share knowledge with the widest range of experts in a particular field. When you consider the benefits of flexible online study, it’s not surprising that even locally-based professionals choose this option.

Short course options

Some of our online learning programmes in this section have the option to be taken as intermittent study, allowing you to complete a masters programme in up to six years.

In addition to compulsory courses, you can choose option courses from a variety of programmes, allowing you to tailor your programme to suit your individual interests and requirements, and enhance your career opportunities in an increasingly competitive marketplace.

Analytical Sciences

Some of our online learning programmes in this section have the option to be taken as intermittent study, allowing you to complete a masters programme in up to six years.

In addition to compulsory courses, you can choose option courses from a variety of programmes, allowing you to tailor your programme to suit your individual interests and requirements, and enhance your career opportunities in an increasingly competitive marketplace.

Programme description

This programme is a unique opportunity for students who want to explore aspects of human anatomy through the flexibility of an online learning programme. It is ideal for medical, biomedical, allied health professionals and those in holistic practice with an interest in human anatomy. The programme draws upon the highly regarded teaching and research staff within the University.

The programme is designed to introduce and develop student knowledge in the anatomical sciences; in addition it is aimed at renewing and strengthening communication and IT knowledge and skills.

Programme structure

The programme consists of courses that draw on material currently used in the on-campus masters programme in Human Anatomy and our medical programme. Each of the taught courses has a set of modules that are released to students on a weekly basis from our virtual learning environment. The modules consist of the following structure:

- a recorded lecture to introduce the topic;
- interactive content (video/animated/narrative);
- a set of resource links to course reading – library and research;
- a discussion board facilitated by a tutor; and
- a set of multiple choice questions which students can take at the end of each week – these are formative and do not contribute to the final mark.

At the end of each module there is a further set of multiple choice questions which students take; these contribute to the final mark.

CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:

- Fundamental Human Anatomy 1; Fundamental Human Anatomy 2; Embryology; Neuronatomy.

DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:

- Advanced Human Anatomy 1; Advanced Human Anatomy 2; Imaging; Histology.

Career opportunities

This programme has been designed not only to help you gain a highly regarded qualification but also to provide you with a set of major transferable skills, which will be relevant to your current career; further study or simply increase your long term career prospects. It is ideal for those working in the professions allied to medicine, including radiography, physiotherapy and sports science.

Entry requirements

A UK 2:1 honours degree or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a medical, biomedical, or relevant bioscience topic. We may also consider your application if you are in a profession allied to medicine or have relevant work experience; please contact us to check before you apply. You may be admitted to certificate level only in the first instance.

Clinical Education

Programme description
Our Clinical Education programme takes advantage of our world-renowned expertise to enhance your abilities to teach and assess students in a clinical environment. This is an ideal programme for those with an educational role in relation to healthcare professionals and veterinary practitioners, including doctors, nurses, dental practitioners, those involved with veterinary education or associated scientists (biomedical or social). Our aim is to help you reflect upon, and share thoughts about, your practice, while increasing your understanding of how to apply educational theories and evidence from the literature. As a result you will learn the knowledge and skills you need to deliver, develop and research high-quality clinical education in your own discipline. This programme is affiliated with the University’s Global Health Academy (see page 53).

www.ed.ac.uk/global-health

Programme structure
There are three courses at the certificate stage and three at the diploma stage. This is followed by your thesis in the third year. We deliver lectures and tutorials online and you will be expected to use self-directed learning, peer discussion boards, tutorials, peer presentations and other similar e-learning activities to help engage with and get the most from the course materials.

YEAR 1: CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:
- Principles of Teaching and Learning
- Classroom Research Training

YEAR 2: DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:
- Approaching and Developing the Individual
- Research in Clinical Education
- Quantitative Research in Clinical Education

YEAR 3: MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:
- A research report of approximately 15,000 words.

Career opportunities
This programme has been designed to enhance your prospects as a teacher and instructor in human or animal health. It promotes high quality clinical education by helping participants reflect upon and share insights about their practice, and to compare and apply educational theories and evidence from the literature, and to help participants develop a good solid foundation in clinical education and educational research upon which they can continue to build their own academic career.

Entry requirements
A primary clinical qualification, such as an MBChB, BVS, BDS, Bachelor of Nursing, or a UK 2:1 honours degree in a relevant subject, or their international equivalents (www.ed.ac.uk/international/graduate-entry). We will also consider your application if you have a biomedical science qualification or a non-university professional qualification, such as Registered General Nurse, with appropriate clinical experience. You must be currently teaching in educational settings.

English language requirements
See page 54.

For fees see page 54 and for funding information see page 56.

Programme Director
Gill Atkinson

Clinical Management

Programme description
This programme is aimed at junior doctors currently undergoing, or about to undertake, specialty training in an infection discipline and is open to trainees in the UK and worldwide. It will also be attractive to those who have completed their training but wish to fulfil continuing medical education elements or wish to obtain a formal qualification in clinical microbiology and infectious diseases.

This programme is aligned with RCPCH and RCPPath training in infection disciplines and combines infection training and higher specialty training in infectious diseases, medical microbiology and medical virology. It is designed to support trainees/specialists in preparation for FRCPath Part 1 Diploma in Infection, infection specialty end of training assessments and hospital-based practice.

You will have access to key texts and research bases and will have direct contact with leading clinicians and clinical scientists, providing a repository of information on infection disciplines.

Programme structure
This programme is designed to meet the needs of trainees and specialist practitioners from all over the world.

CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:
- Introduction to Immunology
- Science and Biology of Bacteria
- Science and Biology of Viruses
- Fungi and Parasites
- Virology
- Immunology
- Virology and Serology
- Anti-Infective Therapy and Resistance

DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:
- Immunopathology: Molecular Diagnostics of Infection
- Community Acquired Infections and Public Health
- Infection Prevention & Control
- Hepatitis B, C and HIV
- Other Infections: encouraged and discouraged patients
- Clinical Syndromes and Infection
- The Returning Traveller: Diagnosis, Investigation and Management of Imported Infection
- Bioinformatics and Study Design

MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:
- Research in Infectious Medicine
- Research in Infection

Career opportunities
The CHM programme is designed to follow the FRCPath and FRCOphth curricula and prepare the advanced trainee for their exit professional examination. The programme is particularly aimed at those new to the discipline, or continuing professional development and will ensure a competitive edge when applying for consultant posts.

Entry requirements
A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also be based in a supervised training programme.

UK applicants should have completed initial specialist training (ST 1/2) or core training (CT 1/2) and early intermediate training (ST 3), and will normally be starting their intermediate training (ST 4).

Applicants from outside the UK, and applicants who are not in a recognised training programme, must demonstrate that the course is directly relevant to their postgraduate training in ophthalmic surgery training.

You should have completed a minimum of 24 months of core training in the surgical specialties and 18 months of specialty training in ophthalmology before enrolling.

We can also consider your application if you are an established, independently practising ophthalmologist.

Clinical Ophthalmology

Programme description
Our Clinical Ophthalmology programme is offered by the University of Edinburgh and the Royal College of Surgeons of Edinburgh, and leads to the award of a Master of Surgery (ChM). It has been developed with the support of NHS Education for Scotland (NES) and is designed to support advanced ophthalmology trainees in the UK and internationally. It provides advanced training in medical and surgical ophthalmologists preparing for the fellowship examinations of the Royal College of Surgeons of Edinburgh (RCSEd) and the Royal College of Ophthalmologists (RCOphth) and those preparing for fellowship examination.

Programme structure
The programme runs on a semester basis and involves approximately 10 hours of study each week in a flexible, modular manner. Compulsory courses in each year of clinical ophthalmology are aligned to the curricula of the FRCSEd and RCOphth. Knowledge and understanding will be assessed with a formal MCoG exam designed to replicate the trainees’ upcoming exit exams.

YEAR 1 COURSES PREVIOUSLY OFFERED INCLUDE:
- Ophthalmology 1
- Core Ophthalmology
- Applied Basic Sciences
- Examination and Surgical Strategies
- Clinical Decision Making
- Therapeutics, Avoiding and Managing Complications
- Diagnostics and Technologies in Clinical Practice
- Acute Ophthalmology, Trauma and Advanced Surgical Techniques

YEAR 2 COURSES PREVIOUSLY OFFERED INCLUDE:
- Ophthalmology 2
- Core Academic Activity (reflective ePortfolio)
- Examination (MCoG and EMF)
- Specialist Academic Activity

Career opportunities
The CHM programme is designed to follow the FRCSEd and FRCOphth curricula and prepare the advanced trainee for their exit professional examination. The programme is particularly aimed at those new to the discipline, or continuing professional development and will ensure a competitive edge when applying for consultant posts.

Entry requirements
A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also be based in a supervised training programme.

UK applicants should have completed initial specialist training (ST 1/2) or core training (CT 1/2) and early intermediate training (ST 3), and will normally be starting their intermediate training (ST 4).

Applicants from outside the UK, and applicants who are not in a recognised training programme, must demonstrate that the course is directly relevant to their postgraduate training in ophthalmic surgery training.

You should have completed a minimum of 24 months of core training in the surgical specialties and 18 months of specialty training in ophthalmology before enrolling.

We can also consider your application if you are an established, independently practising ophthalmologist.

Clinical Trials

MSC up to 6 yrs PT, PgDip up to 4 yrs PT, PgCert up to 2 yrs PT, PgProfDev up to 2 yrs PT

Programme description
This programme will provide a knowledge and understanding of the key elements and principles of clinical trial design, delivery and analysis, in addition to the principles of GCP and their practical implementation in clinical trials. It is suitable for graduates of medicine, nursing, pharmacy, life sciences and other allied disciplines involved in clinical trials. This programme will support the demand for appropriately qualified investigators to lead clinical trials of all phases. It covers commercial aspects of drug discovery and development, trial and project management, statistics and data management, regulations and ethics, imaging, medical devices and complex interventions.

Programme structure
This programme is made up of compulsory and option courses.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
Clinical Trials Foundation Course: Introduction to Clinical Trials; Good Clinical Practice, Ethics and Regulatory Issues.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
Principles of Clinical Trial Management; Clinical Trials in Special Populations; Patient and Public Involvement; Pharmacovigilance; Study Design; Monitoring and Audit; Translational Imaging and Clinical Trials; Commercial Aspects of Drug Discovery; MSc Dissertation or Clinical Trials e-Portfolio.

You will be supported as an active member of a vibrant online community where clearly defined learning outcomes are facilitated by tasks and materials that foster active, relevant and collaborative learning, supported by the purposeful use of digital media and online technology.

Career opportunities
The programme aims to equip students with the necessary knowledge and skills to be a leader of clinical trials, supplementing and extending any undergraduate training and work experience. The programme will also provide an important step towards gaining employment in either the commercial or non-commercial/industrial sectors. The MSc programme is designed to highlight the candidate’s commitment to continual professional development and will ensure a competitive edge when applying for future employment positions.

Entry requirements
A medical degree (MBChB or equivalent), or a UK 2:1 honours degree or above, or its international equivalent [www.ed.ac.uk/international/graduate-entry). We may also consider your application if you have 3.5 years’ relevant work experience; please contact us to check before you apply. You may be admitted to certificate level only in the first instance.

Family Medicine

MFM 2 yrs PT

Programme description
This programme provides high-quality, medical education in family medicine by online learning, to an international audience in India and other partner countries where health systems are beginning to identify family medicine as a clinical specialty. The programme will give doctors a comprehensive understanding of the principles, processes and practices of family medicine, and the essential medical knowledge and management skills for the most common presenting health issues. It is based on the competencies identified by the World Association of Family Medicine:
• an understanding of health promotion, prevention, diagnosis, treatment and care within a district hospital/health centre/community setting;
• skills in leadership and management of primary healthcare teams; and
• an understanding of continuity and contextualisation of care of the individual, the family and the community.

Programme structure
This online learning programme is delivered with the support of our partner institution CMC Vellore, India. In addition to the courses delivered online and a dissertation, the programme requires a total of 30 days each year in residency at a rural hospital.

COURSES PREVIOUSLY OFFERED INCLUDE:
There are seven compulsory courses, which cover family medicine, reflective practice and principles of general practice, and evidence-based medicine for rural family medicine in rural settings.

Career opportunities
This programme will shape practitioners to become quality family doctors in rural and peri-urban areas in low income countries.

Entry requirements
A medical degree (MBChB or equivalent). You must be working in India or other low income country and be committed to continue working in poorly resourced areas.

English language requirements
See page 54.

Fees and funding

**Global eHealth**

**Programme description**
This interdisciplinary programme introduces ‘eHealth’ in the context of international health systems and global health challenges, supported by specialist courses covering areas such as public health informatics, telehealthcare and ‘mHealth’.

The term eHealth describes a diverse field concerned with the application of ICT to support the organisation and delivery of healthcare services and to enable citizens to manage their own health and wellness. It has become a priority area for the international healthcare sector and is attracting considerable global investment.

This programme is aimed at a wide audience, including health professionals, policymakers, NGOs, researchers, eHealth vendors and ICT practitioners. It is unique in addressing the topic from a truly international perspective, including a consideration of low and medium income economies.

**Programme structure**
This programme is delivered entirely online using a combination of online tuition, multimedia interactive learning materials, peer-to-peer discussion and independent study. A professional team of experts and e-learning technologists will support your progress.

**CERTIFICATE AND DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:**
- Introduction to Health Informatics and eHealth
- Introduction to Health Informatics: The Ethics and Governance of eHealth
- Telemedicine and Telehealth
- The Business of eHealth: mHealth in High and Low Resource Settings
- Global Health Challenges: Clan-centred Design: Public Health Informatics

**MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:**
In the final phase of the programme, students are assessed on the basis of a structured research dissertation, based on a piece of original empirical research using a range of methods suited to the technology context and questions under investigation.

**Career opportunities**
The ChM provides advanced training for surgeons preparing for the intercollegiate fellowship examination and those approaching consultancy.

**Entry requirements**
A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also have acquired MRCS (or equivalent). A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also have acquired MRCS (or equivalent). You should also have acquired MRCS (or equivalent). You should also have acquired MRCS (or equivalent). You should also have acquired MRCS (or equivalent).

**Global Health & Infectious Diseases**

**Programme description**
In the past few decades there has been almost one new disease emerging each year, and more than 75 per cent of these diseases derive from zoonotic origins. There is now more demand for investment and research to help us manage these diseases better. This programme aims to address the challenges posed by infectious diseases in the 21st century by offering you courses in surveillance, prevention and control of infectious diseases, as well as evaluating how they impact public health. This is a professional postgraduate qualification for biomedical, medical, public health, and veterinary personnel with an interest in global health and infectious diseases.

This programme is affiliated with the University’s Global Health Academy (see page 53): www.ed.ac.uk/global-health

**Programme structure**
The programme normally takes three years, beginning with a series of courses and followed by an individual project or dissertation.

**CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:**
- Global Health Fundamentals and Understanding Infectious Diseases.
- You will also choose either a single course in Applied Epidemiology and Public Health or one of the two courses: Global Citizenship and Globalisation and Health.

**DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:**
- You will choose from a range of courses that includes: Emerging Infectious Diseases; Global Health: Mortality; Neglected Tropical Diseases; Newborn and Child Health; An Introduction to Project Cycle Management; Sexually Transmitted Infections; The Communication of Disease Control; Travel Medicine and Infectious Diseases; Water and Sanitation; Zoonotic Disease.

**MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:**
- You will complete a written reflective element of 10,000-15,000 words.

**Career opportunities**
This programme has been designed to help you fulfil leadership roles in international and national organisations that manage health and disease issues. A number of students have also raised their academic profile through the publication and dissemination of their final year research.

**Entry requirements**
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in a biomedical, medical, public health, veterinary or relevant bioscience topic. We may also consider your application if you have relevant work experience; please contact us to check before you apply. You may be admitted to certificate level only in the first instance.

Email: ghid.onlinemsc@ed.ac.uk

---

**Infectious Diseases**

**Programme description**
This two-year, part-time masters programme is offered jointly by the Royal College of Surgeons of Edinburgh and the University of Edinburgh, and is taught entirely online. Both institutions have combined well previously to deliver an award-winning masters programme to support early surgical training, and continue to serve as a powerful brand in surgery.

You will be taught by experienced tutors – all leading clinicians in their fields – and you will have access to well-defined and managed learning resources and educational material, including an unparalleled online library facility. Illustrative cases will cover technical skills and procedures as well as core knowledge and clinical skills.

**Programme structure**
Based on the UK Intercollegiate Surgical Curriculum, this programme allows you to select advanced modules that match your declared subspecialty, and supports your study towards the Fellowship of the Royal College of Surgeons (FRCS) examinations.

**YEAR 1 COURSES PREVIOUSLY OFFERED INCLUDE:**
- Compulsory courses will cover the basic elements of subspecialties, for instance, emergency surgery and critical care including the assessment and the pre- and post-operative care of the surgical patient. These modules will be taught and assessed using a clinical problem-based approach, supported by systems-based review of the course material.

**YEAR 2 COURSES PREVIOUSLY OFFERED INCLUDE:**
- You will undertake a tailored academic course that reflects your subspecialty. You will explore research and teaching methodology, develop your skills in analysing published evidence and explore interactive and written clinical communication skills. You will also complete an academic critique in a subspecialty area of work.

**Career opportunities**
The ChM provides advanced training for surgeons preparing for the intercollegiate fellowship examination and those approaching consultancy.

**Entry requirements**
A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also have acquired MRCS (or equivalent assessment milestone) and be an Advanced Trainee in General Surgery. A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also have acquired MRCS (or equivalent). A medical degree (MBChB or equivalent) recognised by the General Medical Council. You should also have acquired MRCS (or equivalent). You should also have acquired MRCS (or equivalent). You should also have acquired MRCS (or equivalent). You should also have acquired MRCS (or equivalent).

Global Health Challenges

Programme description
This programme is designed to equip those already working in global health and development, or those planning to work with international and national health agencies, with the tools, knowledge and skills to engage with complex problems related to equitable and just health and wellbeing. It will also be of immense value for those interested in global development and aid, those interested in careers in health journalism, or those who work in international business in the health and social care fields, or in corporate social responsibility and sustainability.

The programme will use the particular expertise that the University and its global partners offer in global health, including its medical, nursing and biomedical excellence, and its strengths in political and social science.

You will develop an understanding of the processes and procedures by which the global health agenda is shaped. You will also gain the analytical and conceptual skills necessary to critically evaluate the nature of global health issues and to understand the interconnections of health with social, environmental, psychological and economic determinants. This programme is affiliated with the University’s Global Health Academy (see page 53): www.ed.ac.uk/global-health

Programme structure
The programme is delivered using an innovative blend of online learning opportunities and environments. It will involve mixed teaching approaches with world expert leaders, online discussion, group project work, and independent study and reflection. After successfully completing this postgraduate certificate, you may choose to take two further postgraduate certificates in Global Development Challenges and Global Environment Challenges. Completion of all three certificates lead to an MSc in Global Challenges.

Our award-winning online learning technology is fully interactive and enables you to communicate with our highly qualified teaching staff from the comfort of your own home or workplace. You will not only have access to Edinburgh’s excellent resources, but also become part of a supportive online community, bringing together students and tutors from around the world.

Career opportunities
Graduates will have an understanding of the knowledge and skills required for pursuing a career with global health agencies, political institutions, business or in academia.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in medicine, nursing, social sciences, biomedicine, or another related discipline. We may also consider your application if you have relevant work experience; please contact us to check before you apply.

Global Health Studies

PgCert up to 2 yrs PT, PgProfDev up to 2 yrs PT

Programme description
This programme is designed to enable those with a personal, academic or professional interest in global health to study a variety of related subjects with theoretical and practical implications and fellow students in a global community.

The programme is structured to equip students with a comprehensive knowledge base in various aspects of global health. The emphasis is on the interdisciplinary nature of the subject and this is reflected by the wide range of courses it is possible to study within the programme – including animal health, biodiversity, global health, infectious and non-communicable diseases, sanitation and water issues, conservation and global citizenship, forensic medicine and science. Some courses benefit from a scientific background, although this is not a requirement.

Programme structure
Courses are taught entirely online. This is a postgraduate certificate for students from a diverse professional background but with a common interest in global health. The programme is modular, offering a flexible student-centred approach to the choice of courses studied; you may choose to study one or more individual courses or complete a sufficient number of course credits to be awarded the certificate. The programme is Invoiced at course level, allowing you to choose your curriculum content and manage your learning within flexible five- or 11-week teaching blocks, which are offered at fixed times across the academic year.

Career opportunities
We value interdisciplinary debate on our courses and effective, professional communication skills form an important part of the outcomes of the programme. Graduates can use their qualification to move into Global Environments in international and national organisations that manage global health issues.

Postgraduate professional development
The courses we offer reflect the range of research and teaching interests of our academic staff and promote discussion of significant issues relating to global health – whether human, animal or environmental. These are the core optional courses which run for five or 11 weeks at a time; and upon completion can lead to a University of Edinburgh postgraduate award of academic credit. You may take a maximum of 50 credits worth of courses through our postgraduate professional development scheme. These credits will be recognised in their own right at postgraduate level, or may be put towards gaining a higher award, such as a postgraduate certificate, postgraduate diploma or MSc.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry). We may also consider your application if you have relevant work experience; please contact us to check before you apply. You may be admitted to certificate level only in the first instance.

Imaging

MSc up to 6 yrs PT, PgDip up to 4 yrs PT, PgCert up to 2 yrs PT, PgProfDev up to 2 yrs PT

Programme description
This programme is aimed at those interested in imaging sciences, light microscopy, preclinical imaging and clinical imaging (including courses in cardio-thoracic, oncology and inflammation imaging). The programme integrates the University’s rich and multidisciplinary imaging educational opportunities and provides a tailored imaging learning experience targeted at the diverse needs and interests of students with backgrounds in clinical medicine, basic sciences and engineering; and information technology.

Programme structure
You may study to postgraduate certificate or diploma, or MSc level.

CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:
You will complete the compulsory courses Techniques & Physics and Practicalities & Safety. You will also complete two courses from the following options: Applications in Disease Research; Clinical Applications; Digital Image Processing & Analysis; Image Interpretation & Evaluation.

DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:
You will complete the compulsory courses Statistics and Study Design. You will also complete four courses from the following options: Biomedical Light Microscopy; Preclinical Imaging; Neuro-anatomy; Body Anatomy; Translational Imaging; Cardiovascular Imaging; Oncologic Imaging; Imaging in Inflammation & Infection.

MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:
You will complete practical work (a project) and assessed activities.

Career opportunities
Clinical graduates will finish the programme with improved clinical image management skills and will also be better able to advise companies and businesses that develop tools and techniques for their specialties, where imaging is required. For pre-clinically focused students, an imaging skill set expands academic possibilities and is more likely to assist with translational techniques necessary to bridge the preclinical and clinical sciences. This programme will also be attractive as a preliminary qualification before undertaking career training in hospital medical physics (for physicists and engineers), or being taking a PhD or research scientist post.

Postgraduate professional development
If you are looking for a shorter course option, we offer online bootcamps for 8 to 11 weeks at a time. These lead to a University of Edinburgh postgraduate award of academic credit. You may take a maximum of 50 credits worth of courses through our postgraduate professional development scheme. These credits will be recognised in their own right at postgraduate level, or may be put towards gaining a higher award, such as a postgraduate certificate, postgraduate diploma or MSc.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in the fields of radiology, radiography, surgery, medicine (MBChB or equivalent) and veterinary medicine, biology, biomedical sciences, physics, engineering, chemistry, light microscopy, preclinical or animal based research, pharmacology, imaging processing, image analysis, computer science, informatics, or informatics.

English language requirements
See page 5-6.

Fees and funding

Internal Medicine

MSc(PgDip)/PgCert 3 yrs, 2 yrs or 1 yr PT

Programme description
This online programme will give you a comprehensive understanding of the processes, investigation procedures and treatment options for common diseases you encounter in general medical practice. The programme is mostly for early postgraduate doctors. It complements the learning you need to achieve membership of the Royal College of Physicians and it may also be suitable for doctors in other specialties, or nurse consultants and other paramedical specialists with extensive clinical experience.

We cover basic physiology, pathophysiology, therapy and clinical management, as well as clinical skills, generic skills (including writing and research methods), law, ethics and prescribing ability. Problem-based learning through clinical case scenarios will be used to enhance knowledge and clinical decision-making. We use a variety of e-learning resources and platforms, including a virtual classroom with online tutorials and lectures, online interactive resources and virtual patients.

Programme structure
This programme is made up of compulsory and option courses.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
Clinical Pharmacology; Science of Medicine; Laboratory Medicine; Clinical Assessment; Acute Medicine and Clinical Decision-Making; Clinical Skills (Communication, Examination and Medical Procedures); Introductory Skills (IT Skills, Research/literature Evaluation and Writing Skills, Research Methods).

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
Cardiology; Dermatology; Neurology; Clinical Genetics; Translational Medicine; Clinical Education and Teaching; Medical Ethics; Palliative Care.

Career opportunities
This programme is designed to help medical professionals gain the next step in their medical career, with a highly regarded qualification and first-rate expertise.

Entry requirements
A medical degree (MBCh or equivalent) or a UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/country), is a clinically relevant subject. You must have experience in a clinical context. We may also consider your application if you have other relevant work experience; please contact us to check before you apply. You may be admitted to certificate level only in the first instance.

English language requirements
See page 5-6.

Fees and funding
For fees see page 5-4 and for funding information see page 56.

International Animal Health

MSc up to 6 yrs PT, PgDip up to 4 yrs PT, PgCert up to 2 yrs PT, PgProfDev up to 2 yrs PT

Programme description
Livestock are vital to the lives of millions of people, but endemic and epidemic diseases that affect livestock limit productivity and exacerbate poverty. The diseases that can be transmitted between animals and people also threaten the health of livestock keepers, their families and their communities. In many developing regions farmers and animal health workers are often ill-equipped to deal with this risk. This programme draws together expertise from across the University to deliver first-class teaching and research to tackle these issues. This programme is affiliated with the University’s Global Health Academy: www.ed.ac.uk/global-health

Programme structure
You may study to postgraduate certificate, postgraduate diploma or MSc level.

CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:
- Applied Epidemiology and Surveillance; Host Responses to Infection; Pathogen Strategies for Transmission and Survival

DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:
- You will study Zoonotic Disease and either Surveillance and Control of Transboundary Diseases Affecting International Trade or An Introduction to Transboundary Diseases and their impact on Trade and Wildlife populations. You will then choose a selection of courses from the following options: Control of Economically Important Parasites; New Developments in Epidemiology and the Control of Vector Borne Disease; Veterinary Vaccinology; Wildlife Animal Health and Environment; Technology Advances in Veterinary Diagnostics; Animal Disease Survey Design and Analysis; Project Planning and Decision Support for Animal Disease Control; Introduction to GIS and Spatial Data Analysis; Advanced GIS and Spatial Epidemiology and Modelling; An Introduction to Project Cycle Management; Globalisation and Health; The Modern Zoo; Artificial Reproduction Technology and Wildlife; Pastoralism and Herd Health; Zoonotic Diseases in a Global Setting; Socioeconomic Principles for One Health.

MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:
- You will either conduct a written reflective element of 10,000-15,000 words or take Project Cycle Management and Fundraising Application Preparation.

Career opportunities
This programme has been designed to enhance your career in animal management throughout the world with first rate expertise and a highly regarded qualification.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in veterinary medicine, agricultural science, biology or a related science discipline. We may also consider your application if you have relevant work experience; please contact us to check before you apply. You may be admitted to certificate level only in the first instance.

Email iah.onlinemsc@ed.ac.uk

Neuroimaging for Research

MSc up to 6 yrs PT, PgDip up to 4 yrs PT, PgCert up to 2 yrs PT, PgProfDev up to 2 yrs PT

Programme description
Neuroimaging research techniques are now in demand from expanding areas of research that require expert understanding of brain function. These include neuroscience, psychology, pharmacology, informatics, physics, computer science, neuroaradiology and linguistics. This flexible, part-time, online programme allows you to improve your neuroimaging expertise and gain a highly regarded masters qualification, while remaining at work in your field and in your own location.

A professional team of neuroimaging experts and e-learning technologists will support your progress.

Programme structure
You may choose to study to postgraduate certificate, postgraduate diploma or MSc level.

CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:
- Techniques and Physics; Applications in Disease; Common Image Processing Techniques; Practicacies of MR.

DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:
- Anatomy; Statistics; Study Design; Common Image Processing Techniques 2. You will also choose one of the following: Functional Imaging; Image Analysis; Translational Imaging and Clinical Trials.

MASTERS
You will complete practical work and assessments.

Career opportunities
This is an ideal programme to help you in your neuroimaging research-based career, giving you advanced and well-recognised expertise in the field.

Postgraduate Professional Development
If you are looking for a shorter course option, we offer online credit-bearing courses which run for 11 weeks at a time. These lead to a University of Edinburgh postgraduate award of academic credit. You may take a maximum of 50 credits worth of courses through our Postgraduate Professional Development scheme. These credits will be recognised in their own right at postgraduate level, or be put towards gaining a higher award, such as a postgraduate certificate, postgraduate diploma or MSc.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in neuroscience, physiology, pharmacology, informatics, psychology, physics, medicine (MBChB or equivalent) or a related subject. We will also consider your application if you have a radiography qualification.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Paediatric Emergency Medicine

MSc/PgDip/PgCert 3 yrs, 2 yrs or 1 yr PT

Programme description
This programme is aimed at high calibre graduates in medicine involved in the management of clinical emergencies in children. It is ideal for trainees in paediatrics and emergency medicine, and also highly relevant for anaesthetists who wish to develop skills in paediatric anaesthesia or paediatric intensive care. It will also help primary care practitioners who work in remote and rural areas without paediatric support.

The programme is designed to give you the educational background you need to manage medical emergencies in children, throughout the world. The final year of the programme can be tailored to your circumstances or paediatric intensive care. It will also help primary care practitioners who work in remote and rural areas without paediatric support.

Career opportunities
This programme involves approximately 10 hours of study each week in a flexible, modular manner. At postgraduate certificate and postgraduate diploma levels, students must attend an end-of-year examination, held in Edinburgh for UK-based students or with a pre-approved partner institution for international students.

Year 1: Certificate Courses Previously Offered Include:
- Basic Ophthalmic Science
- Anatomy
- Pathology
- Physiology of the Ocular Structures: Basic Examination & Investigation Techniques
- Basic Glaucoma
- Basic Macular Disease
- Basic Acute Eye Disease & Vision Loss
- Efferage and Referral Refinement

Year 2: Diploma Courses Previously Offered Include:
- Advanced Ophthalmic Science: Anatomy, Pathology, Physiology of the Ocular Structures: Advanced Examination & Investigation Techniques
- Advanced Glaucoma
- Advanced Macular Disease
- Advanced Acute Eye Disease & Vision Loss
- Advanced Efferage and Referral Refinement

Year 3: Masters Courses Previously Offered Include:
- Glaucoma
- Ocular Structures
- Advanced Acute Eye Disease & Vision Loss;
- Advanced eTriage and Referral Refinement;
- Basic Acute Eye Disease & Vision Loss;
- Basic Macular Disease;
- Advanced Glaucoma;
- Ocular Structures;
- Advanced Acute Eye Disease & Vision Loss;
- Advanced eTriage and Referral Refinement

Programme structure
You may choose to study to postgraduate certificate, postgraduate diploma or MSc level.

Year 1: Certificate Courses

Year 2: Diploma Courses

Year 3: Masters Courses

Programme director
Paula Midgley

Entry requirements
A medical degree (MBChB or equivalent) plus one year of postgraduate academic or research career.

Key FT: Full time; PT: Part time.

Primary Care Ophthalmology

MSc up to 6 yrs PT, PgDip up to 4 yrs PT, PgCert up to 2 yrs PT, PgDipDev up to 2 yrs PT

Programme description
This programme is jointly offered by the University and the Royal College of Surgeons of Edinburgh, and has been developed in partnership with NHS Education for Scotland (NES). It is aimed at supporting optometrists seeking formal postgraduate training in community-based clinical care, and also medical and surgical trainees entering ophthalmology training.

This programme offers first rate preparation for the Fellowship of the Royal College of Surgeons of Edinburgh (FRCEd) and Fellowship of the Royal College of Ophthalmologists (FRCOphth) examinations or equivalent.

Programme structure
This programme involves 10 hours of study each week in a flexible, modular manner. At postgraduate certificate and postgraduate diploma levels, students must attend an end-of-year examination, held in Edinburgh for UK-based students or with a pre-approved partner institution for international students.

Year 1: Certificate Courses

Year 2: Diploma Courses

Year 3: Masters Courses

Programme director
Oonagh Lawrie

Entry requirements
A medical degree (MBChB or equivalent), or a UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in optometry, orthoptics, dispensing optics, ophthalmic nursing or biomedical sciences.

We will also consider your application if you have 3-5 years’ relevant work experience or professional qualifications, such as RGN, with appropriate clinical experience.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

MSc Programme Administration
Email mscinfo@ccsed.ac.uk

Primary Dental Care

MSc/PgDip/PgCert 3 yrs, 2 yrs or 1 yr PT

Programme description
This programme provides masters-level education for primary care clinicians, with a particular emphasis on restorative dentistry. It is designed to meet the needs of dental practitioners from all over the world.

The programme develops your ability to take an evidence-based approach to clinical practice and to assess and provide quality primary dental care.

Programme structure
Each course will run over a period of six or 12 weeks with participation in online discussions and completion of timed tasks being a compulsory part of the process. The programme is supported by a virtual learning environment and all the educational material is available online.

Maintenance of a portfolio of evidence is an essential component of assessment. Students are strongly encouraged to include a reflective element and to maintain a personal journal. There is a significant commitment of time required to complete this course and you will be required to take part in weekly tutorials and discussions. It is estimated that 15-20 hours a week of clinical time and personal study will be required.

Year 1: Certificate Courses

Year 2: Diploma Courses

Year 3: Masters Courses

Programme director
Oonagh Lawrie

Entry requirements
A dental degree (MBChB or equivalent), or a UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in medicine, nursing, social science, science, biomedical, or other related discipline.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

MSc Programme Administration
Email mph@ed.ac.uk

Public Health

MPH 3 yrs PT, PgDip 2 yrs PT, PgCert 1 yr PT, PgProfDev up to 2 yrs PT

Programme description
Public Health is about preventing disease, prolonging life and promoting health through the efforts of society. This is the ideal programme for those wishing to address today’s problems in public health. You will gain an understanding of how different scientific disciplines can be used to investigate and develop the best professional practice in epidemiology, public health and the social science of health. This programme is taught by lecturers at the Usher Institute for Population Health Sciences and Informatics, an interdisciplinary research hub that draws together researchers, clinicians and practitioners from public health, primary care, medical informatics and biomedical and social sciences.

It incorporates the Centre for Population Health Sciences, the Centre for Medical Informatics and the Centre for Global Health Research, which is also a WHO Collaborating Centre for Population Health Research and Training. This programme is affiliated with the University’s Global Health Academy (see page 53): www.ed.ac.uk/globalhealth

Programme structure
You can study to masters, diploma, or certificate level. All students follow the same compulsory Year 1 courses, which provide a solid foundation in the fundamentals of public health, whilst a suite of option courses offer you the opportunity to explore areas of interest in more depth and to tailor the programme to your own learning needs and career goals.

Year 1: Certificate Courses

Year 2: Diploma Courses

Year 3: Masters Courses

Programme director
Oonagh Lawrie

Entry requirements
Either 60 credits of option courses (see online for full list) or a dissertation. The dissertation option will only be available by agreement with the programme director if stipulated academic requirements have been met.

Career opportunities
This programme will prepare you for a career in research or academia, professional public health service, clinical epidemiology, health technology assessment, public health protection and a wide range of national and international organisations concerned with preventing disease and improving the health of populations.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/internationalgraduate-entry), in medicine, nursing, social science, science, biomedical, or other related discipline.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Online learning programmes

Science Communication & Public Engagement

MSc/PgDip/PgCert 3 yrs, 2 yrs or 1 yr FT

Programme description
The fields of science communication and public engagement are currently experiencing unprecedented growth. This is being driven by a greater need to demonstrate the impact of publicly funded research, the need for science to be valued and a desire for a stronger evidence base for policy decisions. Many career opportunities are emerging at the interface between academic research and various stakeholders.

You will experience a variety of science communication and public engagement methods and roles and you will engage with current science communication challenges. In the process, you will develop your ability to think critically and to effectively reflect on your practice. The learning from one course is transferable to other courses, thus ensuring interconnection across the programme.

This programme is affiliated with the University's Global Academies: www.ed.ac.uk/globalacademies

Programme structure

YEAR 1: CERTIFICATE COURSES PREVIOUSLY OFFERED INCLUDE:

- Introduction to Science Communication and Public Engagement
- Science and Society A: Principles and Practice in Public Engagement
- Science and Society B: Science Communication; The Role of Social Media in Science Communication.

YEAR 2: DIPLOMA COURSES PREVIOUSLY OFFERED INCLUDE:

- Dialogue for Science Communication and Public Engagement
- Science, Policy and Practice: Science and the Media: Effective Exhibit and Programme Development
- Creative Arts in Science Engagement
- Science Communication; Principles and Practice 2.

YEAR 3: MASTERS COURSES PREVIOUSLY OFFERED INCLUDE:

- SCPE Critical Analysis/Research Project or SCPE Practical Project.

The masters dissertation can be a research or practical project or a combination of both.

Career opportunities
To address the need for effective science communication and public engagement with science, there has been a significant rise in opportunities available for professionals with the specialist knowledge, skills and attributes necessary to pursue roles at the interface between scientific research and communications.

These roles can be found, for example, higher education institutions, research centres, museums, science centres, learned societies and consultancies for democratic decision making. Examples of specific roles are engagement managers, information and education officers, and policy and knowledge brokers, in addition to the traditional science communicator role.

Entry requirements
A 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international). In science or an English-related subject. We will also consider your application if you have other qualifications at UK honours degree level and relevant experience.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Programme Director
Elizabeth Stevenson
Email: stevenson.e@ed.ac.uk

The University of Edinburgh

Surgical Sciences

MSc 3 yrs PT

Programme description
This online programme is jointly offered by the University and the Royal College of Surgeons of Edinburgh. It covers the UK Intercollegiate Surgical Curriculum. This programme gives you first rate preparation for the Membership of the Royal College of Surgeons (MRCSE) examination, with additional emphasis on acquired knowledge and its application. The third year MSc research project also serves as an opportunity to develop an academic career in surgery.

Programme structure
Delivered through an online learning environment, students accumulate credits through a series of courses leading to a Postgraduate Certificate (PgCert), Postgraduate Diploma (PgDip) or MSc. At PgCert and PgDip levels, you must attend an end-of-year examination, held in Edinburgh for UK-based students or with a pre-approved partner institution for international students.

YEAR 1 COURSES PREVIOUSLY OFFERED INCLUDE:

- Introduction to the ESSQ: Cardiovascular and Respiratory; Neurology; Immunology; Microbiology and Haematology; Gastrointestinal; Gastrointestinal 2 and Transplant; Colorectal; Urology: Locomotor and Plastic; Endocrinology, Breast and Skin; ENT/OMFS.

YEAR 2 COURSES PREVIOUSLY OFFERED INCLUDE:

- Preoperative Assessment: Principles of Postoperative and Critical Care; Principles of Surgical Management; Surgical Communication Skills; Academic Activity.

YEAR 3
A masters research project in which you will plan, execute and develop a research paper, potentially involving clinical or laboratory research.

Career opportunities
This programme is designed to let you study towards your MRCS in a flexible way. The vast majority of our recent graduates are now working as doctors and surgeons for NHS trusts and boards across the UK.

Entry requirements
A medical degree (MBChB or equivalent). You must be in a supervised clinical setting.

Fees and funding
For fees see page 54 and for funding information see page 56.

Programme Director
Stephen Wigmore
Email: essinfo@rcsed.ac.uk

The University of Edinburgh

Trauma & Orthopaedics

CHM 2 yrs PT

Programme description
This programme is offered by the Royal College of Surgeons of Edinburgh and the University, and leads to the award of Master of Surgery (CHM). Based on the UK Intercollegiate Surgical Curriculum, the CHM in Trauma and Orthopaedics provides the opportunity for you to select advanced courses relevant to your declared specialty, and supports learning for the Fellowship of the Royal College of Surgeons (FRCS) examinations.

The programme is designed to run alongside clinical training and complement workplace assessment.

Programme structure
The programme runs over two years and involves approximately 10 hours of study each week in a flexible modular manner. It is anticipated that some of this study would receive credit or ‘mirror’ in ‘the-workplace’ activities. The online learning nature of this programme is perfect for doctors working unsociable shift patterns.

YEAR 1
You will explore research and teaching methodology, and develop your ability to analyse published evidence and explore interactive and written clinical communication skills. You will complete an academic masters dissertation project in your chosen sub-specialty area of work. We actively encourage you to seek publication of your work after completion of the programme.

YEAR 2
Compulsory courses cover the core elements of the subspecialties of the orthopaedic syllabus. These are taught and assessed using a clinical problem based approach, supported by systems based review of the course material. You will be expected to critically analyse reference material and, where appropriate, relate it to your own work.

Career opportunities
You will develop in-depth knowledge of your chosen surgical subspecialty and be able to apply this knowledge to the systematic assessment and management of surgical patients in the elective, urgent and emergency clinical setting.

Entry requirements
You must hold a medical degree (MBChB or equivalent) recognised by the General Medical Council and would normally have acquired your MRCS or equivalent assessment milestone and be an advanced trainee in trauma and orthopaedics (ST 5/6 or equivalent).

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Programme Directors
John McKinnie & Matt Moran
Email: cmنمو@rcsed.ac.uk
Urology

CMM 2 yrs PT

Programme description
This programme is offered by the Royal College of Surgeons of Edinburgh and the University, and leads to the award of Master of Surgery (ChM). Based on the UK Intercollegiate Surgical Curriculum, it provides the opportunity for trainees in urology to select those advanced modules relevant to their declared specialty, and supports learning for the Fellowship of the Royal College of Surgeons (FRCS) examinations. The programme is designed to run alongside clinical training and complement workplace assessment.

Programme structure
The programme runs on a semester basis over two years and involves approximately 10 hours of study each week, in a flexible modular manner. It is anticipated that some of this study would receive credit or mirror ‘in-the-workplace’ activities. The online learning nature of this programme is perfect for doctors working unsociable shift patterns.

YEAR 1

Compulsory courses will cover the basic elements of the specialty of urology, including oncology, andrology, stone disease, reconstructive urology, paediatric urology and renal transplantation.

YEAR 2

You will explore research and teaching methodology, and develop skills to analyse published evidence and explore interactive and written clinical communication skills. You will be required to complete an academic critique/dissertation in an appropriate subspecialty area of work.

Career opportunities
Graduates will be able to demonstrate in-depth knowledge of their chosen surgical subspecialty and to apply this knowledge to the systematic assessment and management of surgical patients in the elective, urgent and emergency clinical setting.

Entry requirements
A medical degree (MBChB or equivalent) recognised by the General Medical Council, and you must have acquired your MRCS (or equivalent assessment milestone). UK applicants must be an advanced trainee in general or vascular surgery (or equivalent) or hold FRCS status. You must hold a minimum of 24 months of core training in the surgical specialties and 18 months of specialty training in urology before enrolling for the ChM. Surgeons who have a consultant or career grade surgical specialties and 18 months of specialty training in urology before must have completed a minimum of 24 months of core training in the UK ST 4) and be based in a supervised surgical training environment that supports a variety of learning styles and allows you flexibility in your studies.

YEAR 1 COURSES PREVIOUSLY OFFERED INCLUDE:

- Principles of Vascular Practice
- Venous & Lymphatic
- Principles of Endovascular Practice

Career opportunities
The programme will offer an alternative to clinical/laboratory research training for those students who do not wish to take time out of surgical training. It will develop your academic portfolio and facilitate surgical research projects essential to a research active career. The programme is designed to follow the ISCP curriculum and will prepare advanced surgical trainees for their exit professional examinations allowing appointment as an independently practising surgeon. The award of ChM will highlight your commitment to continual professional development and will ensure a competitive edge when applying for consultant positions.

Entry requirements
You must hold a medical degree (MBChB or equivalent) recognised by the General Medical Council, and must have acquired your MRCS (or equivalent assessment milestone). UK applicants must be an advanced trainee in general or vascular surgery (or equivalent) or hold FRCS status. You must hold a minimum of 24 months of core training in the surgical specialties and 18 months of specialty training in urology before enrolling for the ChM. Surgeons who have a consultant or career grade post (or equivalent) in urology are also eligible for entry.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Vascular & Endovascular Surgery

CMM 2–4 yrs PT

Programme description
This programme is offered by the Royal College of Surgeons of Edinburgh and the University, and leads to the award of Master of Surgery (ChM). Based on the UK Intercollegiate Surgical Curriculum, it provides the opportunity for surgeons preparing for the intercollegiate fellowship examination and approaching independent surgical practice.

Programme structure
The programme runs on a semester basis over 2–4 years and involves approximately 10–15 hours of study each week, in a flexible modular manner. The programme is delivered using a purpose-built learning environment that supports a variety of learning styles and allows you flexibility in your studies.

YEAR 1

Compulsory courses in each area of vascular and endovascular surgery are aligned to the Intercollegiate Surgical Curriculum Programme. Courses, include Principles of Vascular Practice; Anxiolysis; Venous & lymphatic; Oedema; Vascular Trauma; Principles of Endovascular Practice. Knowledge and understanding will be assessed in the second year, following completion of compulsory courses, with a formal written examination (MCOs) and E-MJs that will replicate the trainee’s upcoming exit exams.

YEAR 2

You will explore research and teaching methodology, and develop the ability to analyse published evidence and enhance your interactive and written clinical communication skills. You are required to complete a dissertation based on original research or a systematic review in a relevant area of work. Alternatively, an individual with a number of peer-reviewed journal publications may undertake an academic critique of their work.

Career opportunities
The programme will offer an alternative to clinical/laboratory research training for those students who do not wish to take time out of surgical training. It will develop your academic portfolio and facilitate surgical research projects essential to a research active career. The programme is designed to follow the ISCP curriculum and will prepare advanced surgical trainees for their exit professional examinations allowing appointment as an independently practising surgeon. The award of ChM will highlight your commitment to continual professional development and will ensure a competitive edge when applying for consultant positions.

Entry requirements
You must hold a medical degree (MBChB or equivalent) recognised by the General Medical Council, and must have acquired your MRCS (or equivalent assessment milestone). UK applicants must be an advanced trainee in general or vascular surgery (or equivalent) or hold FRCS status. You must hold a minimum of 24 months of core training in the surgical specialties and 2 years of specialty training in vascular surgery before enrolling.

Applicants from outside the UK must have completed a minimum of two years of core training in the surgical specialties and two years of specialty training in vascular surgery before enrolling. We may also consider your application if you undertook another training programme or are a vascular surgeon who already holds FRCS status (or equivalent), please contact us to check before you apply.

English language requirements
See page 54.

Fees and funding

Postgraduate professional development

Postgraduate professional development (PgProfDev or PPD) is a new way of learning aimed at working professionals who want to advance their knowledge through a postgraduate-level programme, without the time or financial commitment of a full MSc or postgraduate diploma or certificate.

Individual courses on our online programmes may be taken as credit-bearing PPD. You may take a maximum of 50 credits worth of courses through our PPD scheme. These credits will be recognised in their own right at postgraduate level, or may be put towards gaining a higher award, such as a postgraduate certificate or diploma or an MSc. If you choose intermittent or PPD study then your tuition fees will be charged on a course-by-course basis.

Full details can be found online: www.ed.ac.uk/medicine-vet-medicine/professional-development
On-campus taught masters and masters by research programmes

Our on-campus master of science (MSc) programmes are designed to develop knowledge or techniques in specialised subjects that are studied more generally at undergraduate level. They take 12 months to complete and are internationally recognised as providing a world-class, research-led teaching and training experience. They are taught through lectures, tutorials and seminars, as well as practical and lab work, and conclude with a dissertation.

A masters by research (MSc by Research) is also a 12-month programme. We offer two different types. The MSc by Research programmes listed in this section enable you to study two 20-week research projects, giving you experience of two different lab environments. They also contain a significant taught element, such as seminars and core skills training. The exception to this is the medical sciences programme (see page 24) which begins with a month of teaching before you spend the rest of the year in one lab. Alternatively, we offer pure research MSc by Research programmes (see pages 32-45) where you will spend 12 months in one lab working on one project.

We also offer other programmes including the master of medical science (MMedSci), master of clinical dentistry (MClinDent) and master of public health (MPh). On all our programmes you will be part of a thriving postgraduate community, with opportunities to participate in a wide variety of academic and non-academic extra-curricular activities to enhance your student experience. Every programme has an experienced team of programme director, coordinator and administrator, and each student has a personal tutor, so you will be fully supported in all aspects of your student experience.

www.ed.ac.uk/pg/244

Biomedical Sciences (Life Sciences)

MSc by Research 1 yr FT

Programme description
This one-year, full-time programme provides an excellent grounding for PhD or other academic study in the biomedical sciences. You will learn valuable research skills, biomedical laboratory techniques and other transferable skills that will give you an advantage for the rest of your career. You can also choose two themes, one each semester, that best suit your interests and career goals.

Programme structure
The programme includes core skills training, seminars, taught courses and laboratory projects in our well-recognised research facilities. Students will carry out two 20-week research projects; a research proposal is prepared for the second project.

PROJECT 1 (FEBRUARY TO AUGUST)
Courses previously offered include: Cardiovascular Biology; Cell Communication; Genomics & Biomedical Pathways; Infectious Diseases; Mechanisms of Inflammatory Disease; Reproductive Science 1; Stem Cells, Tissue Injury and Regenerative Medicine.

You may also be able to undertake projects in integrative neuroscience or in other areas of biomedical sciences, with the permission of the Programme Director. You will also be required to attend the taught element of another theme as appropriate.

RESEARCH PROJECT
Students submit a research proposal based on the work performed for Project 1. This takes the form of a grant application, as would be prepared for a research organisation, and is assessed.

Career opportunities
This programme is an excellent stepping stone to a PhD, or a career in biomedical research or industry. Most of our recent graduates are pursuing further research, working for universities, research institutes and pharmaceutical companies in the UK, US and Asia.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in biological, chemical or physical sciences.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Programme Director Andrew Hall
Email a.hall@ed.ac.uk

www.ed.ac.uk/pg/205

Cardiovascular Biology

MSc by Research 1 yr FT

Programme description
The aim of this programme is to give you a broad-based training in biomedical research, with a focus on cardiovascular science. This includes an introduction to cardiovascular development, the development of cardiovascular disease, organ function and dysfunction, and the cardiovascular system in reproduction and infarction. You will gain an integrated view of the physiology and pathology of the cardiovascular system from both basic and clinical scientists.

Programme structure
You will attend research seminars and tutorials by senior clinicians and basic scientists, and conduct research projects in our internationally renowned laboratories in the Centre for Cardiovascular Science. You will also deliver research-orientated presentations and gain skills in critical reading of scientific literature and in the writing of scientific reports.

Career opportunities
This is the ideal programme for high-achieving students who wish to progress to a PhD in cardiovascular science.

Entry requirements
A UK 2.1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a relevant biological discipline, or a medical/veterinary degree.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

MSc 1 yr FT

Programme description
Our programme aims to improve your theoretical and practical knowledge of human anatomy and to develop your skills as an effective teacher of this subject.

This programme has two main strands. One is the in-depth study of the anatomy of the human body. This will involve the dissection of a human body over two semesters. The other is the development of different methods for teaching human anatomy. Completing these strands will be a lecture-based embryology course providing you with an understanding of normal human development and how normal development can go wrong, manifested in commonly observed congenital abnormalities.

You will also study health and safety, and legal aspects of handling the body, and an introduction to the ethics of using bodies in medical education. The teaching component of the programme will introduce you to the various methods used in teaching anatomy, and their effectiveness. This will involve preparing and carrying out a teaching session to both small and large groups of students.

Programme structure
Teaching is by lectures, seminars and tutorials. The dissection component of the course will be largely self-directed but with regular lectures to complement the practical work.

There will be an opportunity to put into practice what is being learned in the teaching module by teaching students on the medical programme. There will also be guest lectures by experts in their specific field to complement the lecture course.

You have the option to finish after the second semester and graduate with a Diploma in Human Anatomy. Alternatively, to gain your masters, you need to complete a project that can be either library-based, practical based or laboratory based.

Career opportunities
This programme has been designed to help you understand and teach anatomy.

Entry requirements
A UK 2.1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a medical, biomedical, or relevant bioscience topic. We will also consider your application if you are in a profession allied to medicine.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Programme Director Lyndsay Murray
Email anatomy.edinburgh@ed.ac.uk

“...I started studying the MSc Human Anatomy because I’d always wanted to do medicine, but had applied and didn’t get in. I have now got a place to study medicine but, as I enjoyed my masters so much, I intend to go into some kind of medical education, as well as being a practising doctor, when I graduate.”

Programme description
The Master of Medical Sciences programme is the only one of its kind in the UK and is proven to give graduates the competitive edge in the job market. It’s designed for high-achieving medicine graduates who want to explore and benefit from medical research, perhaps with a view to pursuing a PhD or a career in research. We offer you the opportunity to undertake a research project in a laboratory or department relevant to your specialism. The choice of research projects carried out is wide and ranges from bench research to clinical research. You will need to secure a supervisor and project before starting the programme.

Programme structure
The programme begins with a month of teaching, providing you with an overview of the whole range of techniques used in medical research. In the first two weeks you will attend lectures on subjects ranging from stem cell biology to ethics and clinical trials. You will also receive statistics training and will attend practical workshops in cell biology and molecular medicine. While you are learning these subjects you will be taught practical techniques, including basic tissue culture, and how to run polymerase chain reactions and western blots.

Around 20 per cent of the course will consist of taught classes and seminars. The rest is spent in your host department. To consider your research interests and opportunities we advise you to visit Edinburgh’s Clinical Academic Training centre (ECAT) www.ecat.ed.ac.uk or speak to the Programme Director.

Career opportunities
Around a quarter of our students continue to PhD study. Those who choose to return to clinical practice do so with a broader experience of research than is afforded by the undergraduate clinical medicine curriculum. As an example, we have graduates who completed the programme working as MD, orthopaedic registrar and paediatrics resident.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry).

English language requirements
See page 54.

Programme description
This is a one-year, full-time research programme covering all levels of modern neuroscience, which makes it an ideal programme to prepare you for a PhD. We include molecular, cellular, systems, regenerative, cognitive, clinical and computational neuroscience. We also allow you to choose your specialism right from the start, allowing you to shape your learning around your interests and career goals.

Programme structure
You will start with a taught component in the first 12 weeks, and attend ‘themed weeks’, which run in parallel with option courses.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
Developmental Neurobiology; Neural Circuits; Neurodegeneration and Regeneration.

The option courses run during the first 12 weeks on two half-days a week. These will give you a deeper insight into the concepts and methodology of a specific field of interest.

RESEARCH PROJECT
For your research you can choose available projects or contact principal investigators from more than 120 groups in the Edinburgh neuroscience community to develop your own project, on any topic chosen from a broad range, from psychology to nanoscience.

Career opportunities
This programme is designed to help you in your research career. More than 80 per cent of students on the MSc by Research in Integrative Neuroscience have achieved positive next destinations, including PhD, research or clinical career paths.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in biological sciences (including neuroscience) or a medical, dental or veterinary degree.

English language requirements
See page 54.

Programme description
This programme is for dental surgery graduates who wish to extend their knowledge, clinical practice experience and expertise in oral surgery.

The programme will give you theoretical and practical understanding of oral surgery and how it relates to other dental specialties. The syllabus includes components of the core competencies for oral surgery training for the General Dental Council and Royal College of Surgeons of England guidelines:

- Extraction of teeth and retained roots/pathology
- Management of associated complications including oro-antral fistula
- Management of odontogenic and all other oral infections
- Management of impacted teeth
- Management of complications
- Percutaneous surgery
- Dental implant surgery in relation to orthodontic treatment.
- Intra-oral and labial biopsy techniques
- Treatment of intra oral benign and cystic lesions of hard and soft tissues
- Management of benign salivary gland disease by intra-oral techniques and familiarity with the diagnosis and treatment of other salivary gland diseases
- Insertion of osseointegrated dental implants including bone augmentation and soft tissue management
- Appropriate pain and anxiety control including the administration of standard conscious sedation techniques
- Management of adults and children as inpatients, including the medically at-risk patient
- Management of dento-alaeveral trauma and familiarity with the management and treatment of fractures of the jaws and facial skeleton
- Management of oro-facial pain including temporomandibular joint disorders
- Clinical diagnosis of oral cancer and potentially malignant diseases, familiarity with their management and appropriate referral
- The diagnosis of dentofacial deformity and familiarity with its management and treatment
- Diagnosis of oral mucosal diseases and familiarity with their management and appropriate referral
- Control of cross-infection
- Medico-legal aspects of oral surgery.

Programme structure
You will participate in lectures, seminars and a rehearsal of procedures in the clinical skills laboratory. You will also undertake an integrated programme of theoretical, clinical and laboratory teaching.

Career opportunities
This programme has been designed for dental surgery graduates who wish to specialise in oral surgery.

Entry requirements
A primary dental qualification (such as a Bachelor of Dental Surgery), or its international equivalent (www.ed.ac.uk/international/graduate-entry), plus a minimum of two years’ postgraduate experience. You must meet our English language requirements before your application will be considered. All successful applicants will be required to join Disclosure Scotland’s Protecting Vulnerable Groups (PVG) Scheme before starting the programme. In addition, all applicants who do not live in the UK, or who have spent more than a year abroad, will need to provide equivalent verification from the relevant national authority.

Orthodontics

MClinDent 2 yrs FT

Programme description
This programme is approved as part of the training programme in orthodontic dentistry by the Specialist Advisory Committee in Paediatric Dentistry for those in possession of a training number awarded by the Postgraduate Dental Dean for Scotland.

We start with an introductory programme of lectures, seminars and workshops. Course assessments are mainly essay-based, with a few examinations and presentations. Your dissertation can involve either a review of existing research or analysis of data from a secondary source or data collected especially for your dissertation.

Entry requirements
A primary dental qualification (such as a Bachelor of Dental Surgery), or its international equivalent (www.ed.ac.uk/international/graduate-entry), plus a minimum of two years’ postgraduate experience. You must meet our English language requirements before your application will be considered.

All successful applicants will be required to join Disclosure Scotland’s Protecting Vulnerable Groups (PVG) Scheme before starting the programme. In addition, all applicants who do not live in the UK, or who have spent more than a year abroad, will need to provide equivalent verification from the relevant national authority.

For fees see page 54 and for funding information see page 56.

Programme Director
Niall McGuinness
Email epdi@ed.ac.uk

McClinDent 2 yrs FT

Programme description
This programme has been designed for orthodontist specialists.

You will learn to:
• diagnose anomalies of the dentition;
• detect developmental deviations;
• formulate a treatment plan and predict its course;
• evaluate the need for orthodontic treatment;
• carry out treatment using fixed, functional and removable appliances; and
• treat adults, orthognathic, surgical cases and cleft palate patients.

In addition to developing your scientific approach, the programme will teach you the psychological aspects of treatment.

Programme structure
The programme begins with an introduction of core topics, followed by an introduction to our laboratory facilities and the basics of wire-bending skills, appliance design and appliance construction and mechanics. Clinical patient care is also established early within the first term. This is followed by five structured terms of theoretical seminars and practical classes, supervised clinical and laboratory practice and regular essay and critical appraisal exercises.

Your syllabus will include:
• a clinical skills course;
• examination of the child and adolescent;
• the management of anxious children and adolescents;
• dental caries and periodontal disease in the child and adolescent;
• restorative management of the primary dentition;
• examination, diagnosis and management of dento-alveolar trauma;
• advanced restorative dentistry for children and adolescents;
• management of medically, physically and intellectually compromised patients;
• paediatric oral medicine, oral surgery and oral pathology;
• basic principles of orthodontic treatment;
• comprehensive treatment planning for the child and adolescent; and
• research methods, basic statistics, critical appraisal, clinical governance and clinical audit.

Programme structure
We start with an introductory programme of lectures, seminars and workshops. Course assessments are mainly essay-based, with a few examinations and presentations. Your dissertation can involve either a review of existing research or analysis of data from a secondary source or data collected especially for your dissertation.

Entry requirements
A primary dental qualification (such as a Bachelor of Dental Surgery), or its international equivalent (www.ed.ac.uk/international/graduate-entry), plus a minimum of two years’ postgraduate experience. You must meet our English language requirements before your application will be considered.

Prosthodontics

MClinDent 2 yrs FT

Programme description
This programme is recognised by the Royal College of Surgeons of Edinburgh as being two of the three years of specialist training you require if you wish to sit the Membership in Prosthodontics (the UK specialist qualification in the discipline). The Specialist Advisory Committee in Restorative Dentistry also approves this programme as part of the training programme in Prosthodontics, if you have a training number awarded by the Postgraduate Dental Dean for Scotland.

The programme addresses five components:
• the scientific basis of prosthodontic care;
• the relationship of other dental disciplines to prosthodontic care;
• diagnosis and treatment planning for patients with advanced prosthodontic problems;
• the clinical treatment of patients with advanced prosthodontic problems; and
• clinical treatment involving combined prosthodontic and other dental therapy.

Programme structure
This programme has three major teaching strands. These include seminars and practical classes, supervised clinical and laboratory practice where treatment planning, clinical procedures and technical work are performed for selected cases, and finally a research investigation, which will lead to your dissertation.

Career opportunities
This programme has been designed to help you specialise in prosthodontics.

Entry requirements
A primary dental qualification (such as a Bachelor of Dental Surgery), or its international equivalent (www.ed.ac.uk/international/graduate-entry), plus a minimum of two years’ postgraduate experience. You must meet our English language requirements before your application will be considered.

All successful applicants will be required to join Disclosure Scotland’s Protecting Vulnerable Groups (PVG) Scheme before starting the programme. Public Health

MPh 1 yr FT (2 yrs PT available for UK/EU students)

Programme description
Public Health is about preventing disease, prolonging life and promoting health through the efforts of society. This is the ideal programme if you are a practitioner for the subject and you wish to address today’s problems in public health.

You will gain an understanding of how different scientific disciplines can be used to investigate and then develop the best professional practice in epidemiology, public health and social science, ethics and health. This programme is based in the Usher Institute for Population Health Sciences and Informatics, an inter-disciplinary research hub which draws together researchers, clinicians and practitioners from public health, primary care, medical informatics and biomedical and social sciences. The Institute incorporates three research centres: the Centre for Population Health Sciences, the Centre for Medical Informatics and the Centre for Global Health Research. The last of these is also a WHO Collaborating Centre for Population Health Research and Training.

In addition, the programme is affiliated with the University’s Global Health Academy: www.ed.ac.uk/global-health

Programme structure
The year is divided into two semesters of taught courses, followed by completion of a dissertation between May and August. Teaching is by lectures, seminars and workshops. Course assessments are mainly essay-based, with a few examinations and presentations. Your dissertation can involve either a review of existing research or analysis of data from a secondary source or data collected especially for your dissertation.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
Introduction to Epidemiology; Introduction to Qualitative Research; Introduction to Research Ethics; Introduction to Statistics; Introduction to Systematic Reviews.

OPTION COURSES PREVIOUSLY OFFERED INCLUDE:
Advanced Protocol Development; Clinical Trials; Communicable Disease Control and Environmental Health; Developing and Evaluating Complex Public Health Interventions; Epidemiology of Chronic Diseases; Epidemiology for Public Health; Further Statistics; Genetic Epidemiology; Global Health Epidemiology; Health Promotion; Introduction to Global Health Monitoring; Introduction to Global Health Promotion; Public Health Ethics; Qualitative Research in Health; Resource Allocation & Health Economics; Sociology of Health & Illness; Statistical Modelling.

Career opportunities
This programme will prepare you for a career in research or academia, professional public health service, clinical epidemiology, health technology assessment, public health protection and a wide range of national and international organisations concerned with preventing disease and improving the health of populations.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in medicine, nursing, social science, science, biomedicine, or other related discipline.

English language requirements
See page 54.

Fees and funding
For fees see page 54 and for funding information see page 56.

Regenerative Medicine: Clinical & Industrial Delivery

MSc 1 yr FT

Programme description
The pharmaceutical and life sciences industries are investing in stem cells, either in direct applications where the stem cells themselves would be used for therapy or indirectly, where stem cell derived tissues will be used for drug screening and toxicity testing. This programme is intended to meet current and future needs of the pharmaceutical industry and healthcare providers by providing a cadre of well trained scientists capable of fulfilling managerial, administrative, research and technical roles within the developing commercial regenerative medicine sector. Our programme covers key theoretical and practical aspects of the growth and maintenance of pluripotent stem cell lines, the directed differentiation of these cells into defined tissue phenotypes, and the maintenance of the differentiated state under conditions suitable for drug testing/screening programmes. Essential elements of good practice will also be included, such as quality assurance and the regulatory framework that surrounds the derivation, storage and use of human cells.

Our teaching is multidisciplinary, with contributions from the fields of medicine, biology, chemistry and bioinformatics. This programme contains both taught and independent project components.

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
Fundamental Biology of Stem Cells; Basic Techniques in Regenerative Medicine; Stem Cells and Regenerative Medicine: Production of Differentiated Cells; Regenerative Medicine and the Clinic or Regenerative Medicine and Industry; Industrial placement.

Placement
There will be an industrial placement of three months, situated within a life sciences company specialising in aspects of regenerative medicine. Financial assistance may be available to cover travel expenses to the location of the industrial placement.

Career opportunities
Graduates will be equipped for a variety of roles within the developing commercial regenerative medicine sector.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a relevant biological discipline, or a medical/veterinary degree.

English language requirements
See page 54.

Fees and funding
See page 54 and for funding information see page 56.

Programme Director Paul Travers
Email paul.travers@ed.ac.uk

Reproductive Sciences

MSc by Research 1 yr FT

Programme description
This MSc by Research programme aims to introduce you to modern molecular and cellular biological research in the field of reproductive sciences, reproductive health and reproductive medicine in a stimulating, challenging and vibrant research atmosphere, at the interface between basic science and clinical patient care. The programme is intended for high-achieving students with biological science, medical or veterinary backgrounds.

Research topics offered include problems in all reproductive organs, and throughout pregnancy and labour, in the fetus and neonate, and in-fetal programming resulting in increased risk of chronic disease in adulthood. The MRC Centre for Reproductive Health (CfRH) has close links with other internationally recognised research centres. Many student projects are organised with these centres, reflecting the interdisciplinary research environment, where students and trainees are regarded as the lifeblood of the future. Research at the CfRH addresses questions of crucial importance to reproductive health that have implications for resilience and well-being in other organs.

Programme structure
The programme provides a core grounding in basic science and interlinked medical aspects of reproductive sciences. It is delivered through a two-week laboratory skills training course, followed by two 20-week laboratory-based research projects. These projects provide you with hands-on laboratory experience and training in a wide range of techniques in molecular and cellular biology. You will also gain professional and scientific skills such as effective communication, and scientific writing through project reports and a grant application.

Alongside the project work there is a series of lecture courses and seminars delivered by internationally recognised experts, together with both staff and student-led small-group tutorials.

Career opportunities
This programme is the ideal route for those wishing to embark on a PhD, or a technical laboratory role in the field of reproductive health, spanning the biosciences, clinical and veterinary fields. The skills gained are also readily transferable into careers at the clinical laboratory interface and in the broader biosciences industry. This programme does not amount to training to become a clinical embryologist.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a relevant biological, medical or veterinary medicine discipline.

English language requirements
See page 54.

Fees and funding
See page 54 and for funding information see page 56.

Programme Director Sander van den Driesche
Email s.vandendriesche@ed.ac.uk

Science Communication & Public Engagement

MSc 1 yr FT

Programme description
The field of science communication and public engagement with science is currently enjoying unprecedented growth. This is driven by a greater need to understand the impact of publicly funded research, the need for research to be valued and a desire for a stronger evidence base for policy. Many career opportunities are emerging at the interface between scientific research and various public groups. You will experience a variety of science communication and public engagement methodologies and you will engage with current science communication challenges. In the process, you will develop your ability to think critically and to effectively reflect on your practice. The learning from one course is transferable to other courses, thus ensuring interconnection across the programme.

Programme structure
This MSc is a 12-month programme, divided into three semesters. You will also complete placements in an organisational setting. Teaching methods contain a blend of lectures, individual and small-group activities, and practice-based sessions. Teaching styles will be designed to model the practices in science communication and public engagement. The final semester consists of a dissertation project which can be research based, practical or a combination of both.

This programme is affiliated with the University’s Global Academies: www.ed.ac.uk/globalacademies

COMPULSORY COURSES PREVIOUSLY OFFERED INCLUDE:
Science, Society and the Media; Principles and Practice in Science Communication and Public Engagement; The Role of Social Media in Science Communication; Science Education; Dialogue for Science Communication and Public Engagement; Science Policy and Practice.

PLACEMENTS
Students will also complete two placements in public engagement workplaces. The University of Edinburgh has excellent links with many organisations and opportunities for placements with National Museums Scotland, Edinburgh International Science Festival and in policy and education organisations.

Career opportunities
There has been a significant rise in opportunities available for scientists with the specialist knowledge, skills and attributes necessary to pursue roles at the interface between scientific research and the public. Such roles might include engagement managers, and information and education officers, in environments such as museums, science centres, and university and education institutions.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a science-related subject. We will also consider your application if you have other qualifications at UK honours degree level and relevant experience.

English language requirements
See page 54.

Fees and funding
See page 54 and for funding information see page 56.

Programme Director Elizabeth Stevenson
Email e.stevenson@ed.ac.uk

Transfusion, Transplantation & Tissue Banking

MSc 3 yrs PT (available for UK/EU students)

Programme description
This MSc will give you in-depth expertise and knowledge of the science, regulations and international practices in transfusion, transplantation and tissue banking, for those aiming for more senior management roles in healthcare organisations.

The programme covers the following areas:
• fundamentals of transfusion science;
• patient management;
• blood donation processing and testing;
• immunology and molecular biology of transfusion;
• clinical blood banking;
• transplantation and tissue banking;
• biopharmaceutical transplantation and clinical trials;
• management and communication;
• governance/ethics of transfusions and research skills.

Programme structure
The programme involves eight to nine course weeks, over two years, that combine lectures, tutorials and assessments. A variety of learning experiences and assessment tasks will stimulate interest, encourage participation and develop transferrable skills. You will be required to undertake self-directed learning between courses. Throughout the programme, summative and formative assessment techniques will be employed.

After two years, you will take three exams for the diploma qualification. If you are successful, you can carry out a research project in the third year to achieve the master’s qualification.

Career opportunities
This programme is designed to help you progress within health services in the transfusion, transplantation and tissue banking fields.

Entry requirements
A UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in a relevant biological science. You should also have at least two years’ experience working in a relevant discipline, in a healthcare setting, and currently be working in a transfusion, transplantation or tissue banking environment. We will also consider candidates who do not meet the above qualifications provided they are practising biomedical or clinical scientists registered with the Health & Care Professions Council (HCPC) or international equivalent. In addition they must have professional qualifications to a suitable level with a relevant profession (e.g. The British Blood Transfusion Society or the Institute of Biomedical Science). Please check with the programme team before applying as these applications are considered on a case-by-case basis.

English language requirements
See page 54.

Fees and funding
See page 54 and for funding information see page 56.

www.ed.ac.uk/studying/prospectus-request
A world-class research experience

We produce world leading and internationally recognised research. Our research centres and institutes are based at campuses across the city, providing an exceptional environment for trainees.

Little France campus
Our teaching and research facilities at Little France are next to the Royal Infirmary Edinburgh, a major teaching hospital that provides a full range of acute medical and surgical services for patients from across Lothian. It also offers specialist services for people from across the south-east of Scotland and beyond, and hosts Scotland’s biggest maternity unit – the Simpson Centre for Reproductive Health – where more than 6,000 babies are born each year. Our researchers are based within state-of-the art buildings including the Medical Research Council (MRC) Centre for Regenerative Medicine and the Queen’s Medical Research Institute (QMRI), which hosts more than 800 researchers focusing on key research themes in inflammation, cardiometabolic risk, reproductive health and development.

Research centres
British Heart Foundation Centre for Cardiovascular Science: www.cvs.ed.ac.uk
MRC Centre for Inflammation Research: www.cir.ed.ac.uk
MRC Centre for Reproductive Health: www.crh.ed.ac.uk
Clinical Research Imaging Centre: www.cric.ed.ac.uk
MRC Centre for Regenerative Medicine: www.crm.ed.ac.uk

Western General campus
The Western General campus is home to the MRC Institute for Genetics & Molecular Medicine (IGMM), one of the largest centres worldwide for human genetics and human medicine and home to more than 600 research and support scientists. By pooling the resources and complementary skills of partner centres and units, the IGMM brings together distinct expertise that maximises scientific discovery and translation of science.

The IGMM broadly focuses on genes and populations, and normal and diseased cells to study development and disease mechanisms. The partner centres and units are grouped strategically to exploit common strengths in genetic and genomic analysis, and protein, cell and tissue regulation in disease, with emerging emphasis on innovative basic and translational science, from molecules to man and from populations to process.

The IGMM supports both three- and four-year PhD studentships offering an outstanding training to both basic and clinical scientists.

Research centres
The MRC Institute for Genetics & Molecular Medicine: www.ifgmm.ac.uk

Central Area campus
The Central Area is home to members of Edinburgh Neuroscience and the Centre for Population Health Sciences.

Edinburgh Neuroscience, which functions as a research institute ‘without walls’, integrates basic and clinical research in order to drive the fundamental genetic, cellular, organ, systems and computational neuroscience underpinning pathogenesis into mechanistic understanding, future diagnostics and therapeutics of important diseases of the nervous system. It consists of approximately 400 staff, 140 postdoctoral researchers, 230 PhD students and 30 MSc students, working in approximately 120 research laboratories: www.edinburghneuroscience.ed.ac.uk

The Centre for Population Health Sciences brings together researchers with expertise in epidemiology, statistics and modelling, sociology, social policy, psychology, economics, geography, health promotion, nursing and medicine. Thus, the Centre’s research projects can take advantage of a multidisciplinary approach when needed, which is often the case in population health research.

Research centres
Centre for Clinical Brain Sciences: www.ccbss.ed.ac.uk
Centre for Cognitive and Neural Systems: www.cccns.ed.ac.uk
Centre for Neurogeneration: www.cnrg.ed.ac.uk
Centre for Integrative Physiology: www.ed.ac.uk/integrative-physiology
Centre for Population Health Sciences: www.cphs.mvm.ed.ac.uk

Translational research and innovation linking academic and clinical activities is underpinned by the Edinburgh BioQuarter, also based at Little France: www.edinburghbioquarter.com
Research opportunities

All of our research areas are available to study at PhD and MSc by Research level. We offer two types of masters by research (MSc by Research) programme. Those listed in this section are pure research programmes where you will spend 12 months in one lab working on one project. This gives you an excellent grounding in research that can serve as a stepping stone to a PhD. Alternatively we offer MSc by Research programmes that contain a significant taught element (see pages 22-29), allowing you to study two 20-week research projects in two different lab environments and MMedSci by Research Medical Sciences (see page 24) which begins within a month of teaching before you spend the rest of the year in one lab. A PhD is a research programme entailing research training and supervised research, either on an individual basis, or as part of a team. The aim of the PhD is to provide a thorough training in a particular academic area, through original investigation and experimentation. A PhD typically takes three years to complete and is assessed by thesis. The following list of research areas we offer is not exclusive. Potential applicants should get in touch with the contacts listed under the relevant area to informally discuss their proposed project before applying.

Cardiovascular Science

We offer a transferable skills programme and project-specific courses. You will have a personal supervisor and receive longer term guidance from your thesis committee.

- systematic reviews of treatments (experimental and clinical).
- clinical trials – first into man and large-scale international trials; and
disease modelling;
- epidemiological-based observational disease cohort studies;
- clinical trials – first into man and large-scale international trials; and
- systematic reviews of treatments (experimental and clinical).

As a postgraduate student you must be supported by at least two supervisors and receive longer term guidance from your thesis committee. We offer a transferable skills programme and project-specific courses. PGD meetings and an annual CCBS Day offer valuable opportunities for interdisciplinary collaboration.

Child Life & Health

Research profile

Child Life and Health conducts research in paediatric and adolescent medicine. We seek to foster and deliver internationally leading research and training into the causes, consequences and management of childhood onset diseases as well as optimising the healthy development of children and young people.

Our main areas of research include brain and acute injury, brain and neurodevelopment, cancer and late effects, gastroenterology and nutrition, growth and endocrinology, immunology of respiratory viral infections, asthma and allergy, and surgery.

We collaborate with National Health Service (NHS) researchers including the Royal Hospital for Sick Children, the Simpson Centre for Reproductive Health and Community Paediatrics, Lothian Primary Care Trust and NHS Greater Glasgow and Clyde. We also have ongoing collaborations within the University.

Contact Jurgen Schwarze
Email jurgen.schwarte@ed.ac.uk

Clinical Brain Sciences

Research profile

The Centre for Clinical Brain Sciences (CCBS) is a multidisciplinary transitional centre without walls that combines basic and applied research to study the causes, consequences and treatment of major brain disorders. It is a major University interdisciplinary group that comprises the Division of Clinical Neurosciences (www.ed.ac.uk/clinical-brain-sciences) and the Division of Psychiatry (www.ed.ac.uk/psychiatry).

Our research approach is to integrate laboratory and clinical studies using a range of experimental tools and methodologies that include:

- human stem cells;
- disease modelling;
- advanced clinical imaging;
- epidemiological-based observational disease cohort studies;
- clinical trials – first into man and large-scale international trials; and
- systematic reviews of treatments (experimental and clinical).

As a postgraduate student you must be supported by at least two supervisors and receive longer term guidance from your thesis committee. We offer a transferable skills programme and project-specific courses. PGD meetings and an annual CCBS Day offer valuable opportunities for interdisciplinary collaboration.

BBRSC EASTBIO Doctoral Training Partnership

Shaping bioscience research training in the east of Scotland

EASTBIO DTP provides world-class bioscience doctoral training in four areas of strategic priority: basic bioscience underpinning health (ageing); bioenergy and industrial biotechnology; food security; and world-class bioscience. We offer an excellent programme of collaborative training for PhD students in Aberdeen, Dundee, Edinburgh and St Andrews, at four of the UK’s leading research intensive universities. For more information see: www.eastscotbiophd.ac.uk

Entry requirements

You should have an undergraduate degree in medicine or veterinary medicine, or a UK 2:1 honours degree, or its international equivalent (www.ed.ac.uk/international/graduate-entry), in an appropriate subject. For PhD, a UK masters degree or equivalent may also be required. Please check the specific entry requirements for your programme online before applying. Higher qualifications such as doctor of clinical dentistry (DClinDent), dentist of dental surgery (DDS) and doctor of medicine (MD) have additional requirements. Please view their programme entries online for full details.

Clinical Education

Research profile

This PhD builds on our world renowned expertise in the field of clinical education, and our well-established and respected Masters in Clinical Education programme. It is ideal for those wishing to further their career in academic clinical or medical education, who already have experience of delivering education for healthcare professionals, whether students, doctors, nurses, allied health professionals, or dental or veterinary practitioners. It will appeal to those seeking leadership positions or to undertake independent high-quality research in clinical education.

Some of our current research focuses on:

- faculty development;
- assessment and feedback in medical education;
- psychometrics;
- learning outcome development and mapping;
- students learning to teach and peer-assisted learning (PAl);
- preparation for practice;
- international medical education;
- clinical skills.

We have good collaboration between University faculty, clinicians, NHS Education for Scotland and other institutions.

Entry requirements

A master’s degree in a relevant field e.g. clinical, medical or health professions education is required as well as a primary clinical qualification, such as an MRCP, BVS, BDS, Bachelor of Nursing or other degree. Applications from those with biomedical or social science qualifications, or non-university professional qualifications such as RGN with appropriate clinical experience, may be considered. You must have experience of clinical, medical, allied healthcare or veterinary education, for example teaching undergraduate or postgraduate students.

The University of Edinburgh

Medicine Postgraduate Opportunities 2018
Case study: Edinburgh's research with impact

The GRACE risk score

There are more than 100,000 heart attacks in the UK each year, and one in five patients is likely to die within five years of their initial heart attack.

Keith Fox, Professor of Cardiology at the University’s Centre for Cardiovascular Science, has dedicated more than a decade of his highly successful career to researching a critical form of cardiovascular disease, using the latest equipment and other resources at the Centre to lower the risk of heart attack in susceptible subjects.

Project background

Acute Coronary Syndrome (ACS), which includes heart attack and unstable angina that may lead into heart attack, is a major burden on healthcare and society around the world. Before 2000, predicting what would happen in the heart after early ACS symptoms was particularly difficult as the ACS population was uncharacterised. Clinical trials had not taken into consideration the full spectrum of patients and the diversity of clinical practice. In response to this situation, Professor Fox, and Professor Joel Gore of the University of Massachusetts, established a 10-year research programme and the largest multinational study of ACS.

Project results

The result is the Global Registry of Acute Coronary Events (GRACE), which provides clinicians with a powerful yet user-friendly means of identifying higher-risk patients at the time of their presentation. Using Professors Fox and Gore’s GRACE risk score, eight factors – age, heart rate, systolic blood pressure, renal function, congestive heart failure, ST-segment deviation, cardiac arrest and elevated biomarkers – independently predict risk of heart attack and/or death. Through the development of the GRACE risk score, and its subsequent use worldwide, the University of Edinburgh has made an invaluable contribution to the evaluation of treatment outcomes and patient care.

GRACE provides clinicians with a powerful yet user-friendly means of identifying higher-risk patients at the time of their presentation.

Dentistry (DClinDent)

DClinDent 12-36 mths FT

Oval Surgery; Orthodontics; Paediatric Dentistry; Prosthodontics

Programme description

Our DClinDent programmes in oral surgery, orthodontics, paediatric dentistry and prosthodontics are suitable for individuals already holding a taught MClinDent/MSc. They allow the pursuit of specialist training, attainment of a taught professional doctorate in the chosen clinical discipline and preparation for the Specialty Membership Examinations of one of the Royal College of Surgeons. These programmes provide doctoral level educational opportunities to enable you to develop, consolidate and enhance your range of academic and clinical competencies to enable independent and reflective practice at the standard of a specialist in each clinical discipline. The duration of the DClinDent for each discipline will be 36 months, offered on a full-time basis only. Those entering with a MClinDent/MSc from another UK/EU or international institution with at least 240 credits held at Level 12 in the relevant MClinDent/MSc will only be required to study for 12 months.

Each programme will be structured over three semesters and during this time, you will be timetabled to four protected academic sessions each week with the remaining time dedicated to primarily independent clinical practice and interdisciplinary patient management. Each programme will consist of the following four academic and clinical elements: Systematic Review; Specialist-Level Clinical Care; Clinical Governance Project; Specialist-Level Clinical Case-Reports.

Entry requirements

Successful completion of the first two years of the MClinDent programme from the University of Edinburgh, comprising 360 SCQF credits with 240 held at Level 12, or a taught MClinDent/MSc from another institution with a total of 360 SCQF credits, at least 240 of which held at Level 12. All successful applicants will be required to join Disclosure Scotland’s Protecting Vulnerable Groups (PVG) Scheme before starting the programme. In addition, all applicants who do not live in the UK, or who have spent more than a year abroad, will need to provide equivalent verification from the relevant national authority.

Doctor of Dental Surgery

DDS 2 yrs FT (3-4 yrs PT available for UK/EU students)

Programme description

This is a research-based qualification that can be taken either full-time or part-time. The programme is aimed at those in the dental profession who wish to develop high-level research skills by pursuing original research in the field of study, relating particular research to the general body of knowledge in the field, and presenting the results of the researches in a critical and scholarly way.

Edinburgh Dental Institute (EDI) works in partnership with two major organisations to deliver high-quality education, research and patient care. The activities of EDI are as a result of strong cooperation and collaboration between the University of Edinburgh, NHS Lothian, NHS Education for Scotland and the Royal College of Surgeons of Edinburgh.

Training

Our warm and friendly environment offers great opportunities for high-quality education and research. Our transferable skills programme delivers generic training in presentation, project management and writing skills.

Facilities

The EDI was established in 1999 to develop education opportunities for dental postgraduates and the dental team. We have excellent facilities and are situated centrally within the historic and vibrant capital of Scotland.

We are located in Lauriston Place in central Edinburgh and occupy the top three floors of the Lauriston Building, a dedicated outpatient centre for dentistry and a number of other medical disciplines.

Entry requirements

You must:

• hold a UK 2:1 honours degree, or its international equivalent [www.ed.ac.uk/international/graduate-entry];
• have a qualification that is registrable with either the General Dental Council or the General Medical Council or both;
• have at least two years’ experience in scientific work bearing directly on your profession, or in the practice of dentistry or other related disciplines;
• perform your research in Borders, Fife or Lothian Health Boards; and
• be employed by the University of Edinburgh or the NHS, or be a research worker employed, self-financed or grant-funded at the University of Edinburgh, an associated institution or an NHS establishment.

Genomics & Experimental Medicine

PhD 3 yrs FT (6 yrs PT available for UK/EU students)
MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

Research profile

The Centre for Genomics and Experimental Medicine (CGEM) is part of the MRC/University of Edinburgh Institute of Genetics and Molecular Medicine (IGMM).

CGEM’s mission is to use genetics and genomics to understand the mechanisms of disease and design novel intervention strategies. In the last Research Assessment Exercise, the research outputs of CGEM investigators were returned in the clinical and hospital based subjects unit of assessment and received the highest possible rating.

We undertake detailed studies of populations, families and individuals to study a wide range of health-related conditions. We use state-of-the-art genetic, epigenetic, genomic, statistical, bioinformatic, biological and molecular approaches in model systems and clinical studies for systematic investigation of disease aetiology. With this knowledge, we aim to improve disease prediction, prevention and prognosis. Our translational agenda encompasses the development of new medicines and genetically informed use of existing medicines in clinical trials.

Geriatric Medicine

PhD 3 yrs FT (6 yrs PT available for UK/EU students)
MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

Research profile

The research programmes in geriatric medicine have their main bases in three hospitals: Royal Infirmary of Edinburgh, Western General Hospital and Borders General Hospital. Here, researchers study the effects of age, disease, and disease on muscle structure and function. In addition, work continues on the development of casemix-adjusted outcome assessment to facilitate increasingly sophisticated comparisons of hip fracture care in different centres. The Royal Infirmary is also the base for studies investigating the role of fitness training after stroke, the effect of stroke on muscle function and fatigue after stroke, in close collaboration with the Centre for Clinical Brain Sciences; and for new studies investigating the role of glucocorticoids in the aetiology of delirium following surgery.

In the MRC Human Genetics Unit, examining factors influencing age-associated disease and disability, we are continuing work on the genetics and molecular mechanisms of complex human diseases such as diabetes and obesity. We use a wide range of molecular and cellular tools to study a wide range of health-related conditions. We use state-of-the-art genetic, epigenetic, genomic, statistical, bioinformatic, biological and molecular approaches in model systems and clinical studies for systematic investigation of disease aetiology. With this knowledge, we aim to improve disease prediction, prevention and prognosis. Our translational agenda encompasses the development of new medicines and genetically informed use of existing medicines in clinical trials.

Global Health

PhD 3 yrs FT (6 yrs PT available for UK/EU students)

Research profile

This programme offers you the opportunity to work in a multi- and interdisciplinary way, building on your knowledge, skills, interest and passion to carry out innovative global health research that makes a new contribution to the existing knowledge base. There are many opportunities to study Global Health. Contact us with your idea and we will endeavour to match you with potential centres of excellence and supervisors. We have many research priorities, including such global health issues as:

• mapping and measuring the shifting burden of global disease;
• neglected and emerging tropical diseases;
• infectious diseases;
• non-communicable diseases;
• global palliative care;
• population health;
• social inequalities in health;
• sexual and reproductive health;
• e-health and tele-medicine;
• migration and minority ethnic health;
• culture, faith and health; and
• translation of leading scientific advances into effective interventions.

This programme is affiliated with the University’s Global Health Academy: www.ed.ac.uk/global-health

Genetics & Molecular Medicine

PhD 3 yrs FT (6 yrs PT available for UK/EU students)
MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

Research profile

The Institute of Genetics and Molecular Medicine (IGMM) forms part of the University of Edinburgh and is a large, integrated research institute composed of the Centre for Genetic and Experimental Medicine, the MRC Human Genetics Unit, and the Edinburgh Cancer Research Centre. The IGMM’s priorities are basic biomedical research through to clinical brain sciences, cognitive and neural systems, genetics, infectious diseases, inflammation, molecular medicine, neuroscience, population health sciences, regenerative medicine and reproductive health.

Entry requirements

You must:
• have a UK 2.1 honours degree, or its international equivalent;
• have a qualification that is registrable with the General Medical Council;
• have at least one year of experience in scientific work bearing directly on your profession, or in the practice of medicine or surgery; and
• work in the South East of Scotland, either employed as a member of staff of the University of Edinburgh, or as an NHS employee, or as a research worker employed or self-financed or grant-funded, in the University of Edinburgh or an associated institution or an NHS establishment.

Infectious Diseases

MSc by Research 1 yr FT

Programme description
This programme offers research opportunities across Edinburgh Infectious Disease (IED), an organisation that brings together more than 150 principal investigators and more than 760 active researchers across the spectrum of infectious disease science and clinical medicine at Edinburgh.

Previous students have undertaken projects in the following areas:
- antibiotic resistance and healthcare-associated infections;
- arthropod vector biology and vector borne diseases;
- epidemiology and mathematical modelling of animal and human infections;
- functional genomics and bioinformatics;
- molecular diagnosis and point of care detection of infectious diseases;
- the immunology of bacterial and parasitic infections;
- the pathogens of viral diseases (animal and human, including herpes and HIV).

Programme structure
The learning process centres upon a one-year research project. In addition, you will be required to attend local research seminars and lectures related to your area of research, and encouraged to attend those events organised by IED and the Global Health Academy more generally. Training will also be available in generic skills including statistics project management and planning and oral and written presentational skills.

Career opportunities
This postgraduate programme provides an introduction to research methodologies for biologists, medics and veterinarians. Many of our previous graduates have taken this programme as a stepping stone to PhD study, or have chosen a career in research or industry.

Entry requirements
A UK 2:1 undergraduate degree, or an international equivalent (see www.ed.ac.uk/international/graduate-entry), in a relevant subject.

Inflammation

MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

Programme description
The Centre for Inflammation Research (CIR) was established in 1998. It aims to promote the prevention, diagnosis and treatment of inflammatory diseases through interdisciplinary study of the initiation, regulation and resolution of inflammatory responses and provision of an sustainable environment for research training in the field. CIR investigators aim to characterise and manipulate key control points in inflammation. We focus on inhibiting the initiation of inflammation by blocking immunologically specific triggers and by modulating cellular and tissue responses to injury stimuli; finding new approaches to promote beneficial regulation of established inflammatory responses so as to limit tissue injury; and promoting safe resolution of inflammation and restoration of the structure and function of the perturbed tissue. We have particular interest in inflammatory diseases of the lung and kidney but the principles derived will have ready application to inflammatory responses in the liver, bowel, bone/joint and skin. There is also emerging research in the CIR into the links between inflammation and cancer.

Integrative Physiology

PhD 3 yrs FT (6 yrs PT available for UK/EU students)

MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)

Programme description
The Centre for Discovery Brain Sciences (CDBS) carries out research at the molecular, cellular, systems and behavioural levels to understand fundamental mechanisms and pathways relevant to brain and body function in health and disease. CDBS investigators exploit rapid advances in the enabling technologies available from genomics, proteomics, imaging, informatics, and in-vivo analysis to understand the function of gene products at the cell, organ and whole animal level. They also exploit the most appropriate model organisms/systems to investigate the delicate balance between high biomedical relevance (for example human, mouse, rat) and high genetic power (such as C. elegans, drosophila and zebrafish). Research focuses on understanding fundamental mechanisms and pathways relevant to human function in health and disease across the life course. You will have access to state-of-the-art equipment and extensive collaborations exist with the wide biomedical and clinical communities to support your research in a world-class environment. Supervisors maintain the highest standards of research training, with a strong research output in leading international journals.

Medical Informatics

PhD 3–4 yrs FT

Programme description
Advances in data capture platforms in both medicine and life sciences, supported by modern computing and informatics, have greatly energised the overlapping fields of medical informatics and data-intensive biomedicine. The Centre For Medical Informatics at the Usher Institute of Population Health Sciences and Informatics was inaugurated at The University of Edinburgh in 2015. The combination of informatics and biomedicine is fundamental for advances towards 4P medicine – personalised, predictive, preventive, and participatory. The Centre for Medical Informatics is well placed to be a lead in medical informatics and data intensive research, and is co-located with the Farr Institute in Biourquar Building S. Scotland is in a leading position to exploit health data and is uniquely placed in having high-quality linkable datasets optimised for research purposes. These data are also key to the development of commercially exploitable know-how and intellectual property.

This new PhD programme will provide multidisciplinary training in medical informatics and data intensive biomedicine. A variety of projects will be offered, aligned with the research programmes of group leaders within the Usher Institute of Population Health Sciences and Informatics. The programme will be suitable for students from a variety of academic backgrounds, such as physics, mathematics, medicine, biology, data science, epidemiology, statistics, population health and computing science. The common theme across this interdisciplinary group is to build a form of data intensive science that acts as a driving force for new developments in medicine and healthcare.

Research profile
Edinburgh Cancer Research UK Centre (ECRC), based at the Western General Hospital, strives to take a comprehensive approach to cancer research, combining both laboratory-based research and clinical approaches. The Centre studies the genetic and biological basis of cancer and disease pathology and devises and tests new forms of therapy arising from basic, translational and clinical research programmes. Our aim is to carry out high quality research into effective cancer prevention, diagnosis and treatment, as well as the symptoms associated with cancer.

Key
FT: Full time; PT: Part time.
Orthopaedic & Trauma Medicine

**PhD 3 yrs FT (6 yrs PT available for UK/EU students)**

**MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)**

**Research profile**

We offer a comprehensive research programme covering a diverse range of musculoskeletal disorders. There are ongoing projects in musculoskeletal tissue engineering, stem cell and regenerative medicine; orthopaedic engineering and modelling of the musculoskeletal system; osteoporosis and fracture repair; and clinical outcome studies. The orthopaedic engineering unit and the musculoskeletal research unit, along with the microCT facilities, are located at our Little France campus. Facilities for collaborative projects are based in the Centre for Regenerative Medicine and the Centre for Integrative Physiology, also at Little France.

Population Health Sciences

**PhD 3 yrs FT (6 yrs PT available for UK/EU students)**

**MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)**

**Research profile**

The Centre for Population Health Sciences supervises postgraduate research students in a wide range of population health disciplines, including epidemiology, genetic epidemiology, health promotion, health services research, medical statistics, molecular epidemiology and sociology and on a wide range of topics including allergic and respiratory disease, clinical trial and statistics methodology, e-health, ethnicity and health, genetic epidemiology of complex diseases, global health, palliative care and cancer, society and health and families and relationships. Prospective students are encouraged to align their research proposal with the research interests of academic members of staff who may act as first supervisors. A principal aim is to foster interdisciplinary research involving quantitative and qualitative approaches via effective collaboration with biomedical scientists, epidemiologists, social scientists and clinical researchers throughout the University and beyond.

Pathway Medicine

**PhD 3 yrs FT (6 yrs PT available for UK/EU students)**

**MSc by Research 1 yr FT (2 yrs PT available for UK/EU students)**

**Research profile**

The central goal of the Division of Pathway Medicine (DPM) is to integrate post-genomic science with medicine in order to provide a better understanding of disease processes. This will provide the basis for the development of new medical innovations for the diagnosis and treatment of human diseases. To do this the DPM promotes multidisciplinary interactions between science and medicine.

The DPM has two main research themes:

a) pathway biology of infection and immunity involving the study of host-pathogen interaction in immune cells and the modelling of molecular pathways that control immune cell function in health and disease; and

b) biobank medicine in systemic response to disease involving the development of advanced biobank techniques and platforms for translating genomic and pathway research into clinical healthcare.

Precision Medicine

**PhD 3–4 yrs FT**

**Programme description**

This is a new Medical Research Council (MRC) Doctoral Training Programme (DTP) and it is a collaboration between the University of Edinburgh and the university of Glasgow.

Precision medicine is an emerging, transformational approach to disease treatment and prevention, focusing on identifying which strategy will be effective for which patients, based on genetic, environmental, and lifestyle factors. It integrates evidence from advanced data on myriad clinical samples with the individual genomics, e-record, imaging and other data-rich -omics parameters to enable discovery and tailored therapies.

There is a huge unmet need to train a generation of scientists who can excel in state-of-the-art interrogation of genetic and genomic information, developing and utilising analytical methodologies to provide evidence to improve health and wellbeing. We aim to train the next generation of research leaders, expert in informatics-based approaches and biomedical technologies, who are thus able to unravel disease mechanisms and devise new therapies.

You will learn to develop quantitative research creativity for use in careers in fast-moving disciplines, as biomedical science embraces new data-rich opportunities. Our collaborative DTP will provide state-of-the-art training in informatics, data analytics, genetics, genomics, epidemiology, clinical populations, clinical tissue and ‘liquid biopsy’ interrogation and molecular pathology. Hypotheses generated, including novel disease mechanisms and drivers, may be tested in the most appropriate disease models.

Applications for this doctoral training programme, including PhD projects in Edinburgh, should be made via the University of Glasgow website.

The University of Edinburgh Medicine Postgraduate Opportunities 2018

Preventing deaths from pesticides in Asia

In the early 1990s, Sri Lanka had one of the world’s highest suicide rates, at around 52 in 100,000 each year, up from around 8 in 100,000 in 1955. Much of this rise could be traced to the introduction of pesticides into poor rural homes during the late 1960s’ Green Revolution, which made them accessible for self-poisoning. That rate has since fallen to 17 in 100,000 thanks largely to the Sri Lankan Registrar of Pesticides and the work of a group of Sri Lankan and international researchers established by Professor Michael Eddleston, Professor of Clinical Toxicology at the Queen’s Medical Research Institute.

Project background
Professor Eddleston and his colleagues’ research focused on ways to prevent deaths from self-poisoning, through clinical and public health interventions. Their innovative methods and findings inspired improved medical management and revised policies on the composition of pesticides and their availability in small rural communities, as well as changes to poisoning treatments. His group reported on the reduction in suicides in Sri Lanka that followed the Registrar of Pesticides banning the most toxic insecticides used in agriculture, saving tens of thousands of lives.

Project results
Professor Eddleston’s work has been directly responsible for saving the lives of thousands of Sri Lankans every year. His findings influenced the World Health Organisation’s (WHO) decision, for example, to exclude the antidote pralidoxime from its Essential Drugs List in 2009.

In addition, the WHO 2009 guidance on preventing deaths from pesticide poisoning was heavily based on research by Professor Eddleston – all six publications cited in its summary were from his group. These important findings have made an impact on pesticide poisoning guidelines internationally, with guidance on treatment of organophosphate-poisoned patients having now changed across Asia.

Based on 350,000 deaths from pesticide self poisoning across Asia every year, the team’s findings on the use of the antidotes, and the bans of three toxic pesticides in Sri Lanka, are estimated to be saving 10,000 lives a year.

Professor Eddleston’s work has been directly responsible for saving the lives of thousands of Sri Lankans every year.
Research opportunities

The unit also offers a number of research opportunities in areas of
- applied lung physiology,
- sleep apnoea; and
- the effects of cigarette smoke, ozone and other pollutants on the lung;
- gene therapeutic approaches to the augmentation of genes that
- cellular and molecular mechanisms of the resolution and persistence

The major areas of research interest are:

Respiratory Medicine

www.ed.ac.uk/pg/223

Science Communication

www.ed.ac.uk/pg/884

Tissue Repair

www.ed.ac.uk/pg/849

Translational Neuroscience

edin.ac/translational-neuroscience-phd

Programme description

This programme provides cutting edge, cross-disciplinary PhD training
which builds on the breadth of world-class biomedical research
performed within the College of Medicine & Veterinary Medicine.
We aim to train the next generation of scientific leaders in tissue repair.
Successful advancement of tissue repair relies on combining expertise
from basic to translational research in areas of regenerative medicine,
stem cell biology, neurology, reproductive health, inflammation and
vascular medicine.

Fees and funding

For fees see page 54 and for funding information see page 56.

Contact

Damian Mole
damian.mole@ed.ac.uk

Surgery

www.ed.ac.uk/pg/835

Research opportunities

The major areas of research interest are:
- cellular and molecular mechanisms of the resolution and persistence
  of lung inflammation and scarring;
- mechanisms of acute lung injury in the adult respiratory distress
  syndrome;
- gene therapeutic approaches to the augmentation of genes that
  protect against tissue injury in lung inflammation;
- biology of small-cell lung cancer;
- the effects of cigarette smoke, ozone and other pollutants on the lung;
- sleep apnoea; and
- applied lung physiology.

The unit also offers a number of research opportunities in areas of
clinical interest, for example asthma, chronic bronchitis, emphysema
and cystic fibrosis.

PhD 3 yrs FT (6 yrs PT available for UK/EU students)

Programme description

We have more than 20 years’ experience in science communication
practice and have forged lasting partnerships with Edinburgh International
Science Festival, National Museums Scotland, Edinburgh Zoo, National
Galleries Scotland, Our Dynamic Earth and Edinburgh International
Festival and Fringe.

Potential research areas in informal science learning, the role of
social media, and cultural differences in science communication. You
will be linked to two academic supervisors and will pursue your research
under continuous guidance, resulting in a thesis that makes an original
contribution to knowledge. You will be encouraged to present your
research at conferences and in papers for academic journals during your
PhD. You are also encouraged to attend the transferable skills courses
provided by the University and participate in relevant external courses.

Students who have secured their own funding are welcome to apply.

The University has an extensive library collection of books and journals,
many available electronically. Our partnerships with external
organisations enable us to expand the range of facilities on offer.

Entry requirements

A UK 2:1 honours degree or above, or its international equivalent
(www.ed.ac.uk/international/graduate-entry), in a science related
subject. For some non-UK applicants the entry requirement is a
masters degree.

English language requirements

See page 54.

Fees and funding

For fees see page 54 and for funding information see page 56.

PhD 4 yrs FT

Programme description

This innovative research and training programme will focus on the
advancement of knowledge, expertise and skills in clinical translation
and will draw on Edinburgh’s unique research strengths in diseases across
the life-course. Created and delivered by Edinburgh Neuroscience, this
programme will train non-clinical students to combine cutting edge
experimental technologies (such as cellular, regenerative, computational,
genetic, or animal modelling technologies) and analytical tools, with
comprehensive knowledge of the clinical brain research environment. By
doing so, we intend to equip students with the distinct skills required to
bridge the knowledge gap between the design, execution and
interpretation of cellular experiments and the challenges of experimental
medicine.

During the first year, you will undertake three research projects, each
drawn from a different stage of the life-course, from development through to
adolescence/adulthood, and, finally, old age/degeneration. In parallel
you will undertake a bespoke training programme that will draw on
clinical and basic researchers to deliver a range of tutorials, seminars and
clinic visits that will lead to an appreciation, and understanding, of
life-course disorders and the methodologies used to investigate them.

These sessions will provide an opportunity to integrate knowledge from
across basic and clinical disciplines and provide a deeper understanding
of research at the interface of the bench and the bedside.

Drawing on your experience during the rotation projects, you will
select your PhD projects towards the end of Year 1 from a large range of
projects that draw on both basic and clinical elements. You will be
co-supervised throughout your PhD by a basic and clinical researcher.
During Years 2 and 3 there will be continued coaching in life-course
disorders/methodologies, building on the Year 1 activities. You will then
submit your PhD thesis dissertation by the end of Year 4.

Edinburgh Neuroscience brings together neuroscience researchers
from across the University, from fundamental, clinical, psychological and
informatics arenas to provide an outstanding collegiate and dynamic
environment in which to undertake cutting-edge research. We are
perfectly placed to provide a unique training experience that encourages
interaction across disciplines and the life-course.

English language requirements

See page 54.

Fees and funding

For fees see page 54 and for funding information see page 56.

About Edinburgh Medical School

Established in 1726, Edinburgh Medical School was the pre-eminent medical centre of the 18th and 19th centuries. Today it retains its status as a leading force internationally in basic-to-clinical translational research and teaching.

Dynamic experience
We offer you the opportunity to study in an environment where research is an important component of every student’s life, nurturing a way of thinking that will equip you to deliver positive change for humanity. By bringing together clinicians and basic scientists, we create opportunities to develop cutting-edge work that makes a real difference to people’s lives.

Here at Edinburgh you will find a broad range of world leading research centres, including Medical Research Council-funded centres, working side by side. We offer state-of-the-art facilities; co-location and close collaboration with NHS Lothian hospitals; all major imaging technologies; clinical trials support; and commercialisation training and opportunities. Our ground-breaking collaboration with Edinburgh BioQuarter, a landmark life science development on the Little France campus, is establishing Edinburgh and Scotland as one of the world’s major centres for biomedical commercialisation.

Breadth and diversity
We offer enormous breadth and depth of research and learning opportunities. Our research themes include:

- cancer
- cardiovascular science
- application of basic animal sciences in human and veterinary medicine
- genomics and molecular medicine
- global health
- infectious diseases
- inflammation
- neuroscience
- regenerative medicine
- and reproductive health.

Research excellence
Edinburgh Medical School is part of the College of Medicine & Veterinary Medicine. The College’s reputation as one of the world’s leading centres of medical and veterinary medical research was reaffirmed by the Research Excellence Framework (REF) 2014 results. The College’s three submissions to REF were some of the largest REF submissions in the UK. This emphasises the enormous power of the University’s research in human and animal medicine and health. Overall, 84 per cent of our research activity was rated 4*, world leading, or 3*, internationally excellent.

Medicine, the University’s largest REF submission, was ranked in the UK top five. Neuroscience was ranked third in the UK, out of a total of 82 submissions, representing a major advance.

Pioneers and trailblazers
Pioneering staff and students of our College have included the following distinguished individuals:

- Joseph Lister, discoverer of life-saving antiseptic;
- Charles Darwin, world-renowned naturalist and author of On the Origin of Species;
- Sir James Young Simpson, pioneer of chloroform use;
- James Syme, pioneering surgeon;
- Margaret Barry, the first woman to receive a medical degree in the UK;
- Sir John Crofton, who led the team that developed a cure for tuberculosis, the biggest killer of adults in the western world at the time;
- Sir Paul Nurse, who discovered several key regulators of the cell cycle, a breakthrough for which he was awarded the Nobel Prize;
- Sir Robert Edwards, awarded the Nobel Prize in recognition of his role in pioneering in vitro fertilisation or IVF;
- Sir Kenneth Murray, one of the pioneers of DNA sequencing methods and inventor of the first genetically engineered vaccine for hepatitis B;
- Matthew Kaufman, one of the first scientists to culture the embryonic stem cells of mice and cultivate them in a laboratory, paving the way for stem cell research;
- Ian Frazer, who discovered that human papilloma virus (HPV) could develop into cervical and other types of cancer.

Deaneries
Edinburgh Medical School consists of three Deaneries:

- Edinburgh Medical School: Biomedical Sciences
- Edinburgh Medical School: Clinical Sciences
- Edinburgh Medical School: Molecular, Genetic & Population Health Sciences.

Global influence
Medical research at the University has an impact in more than 100 countries, including many developing countries, and benefits millions of individuals in areas such as sleeping sickness, childhood pneumonia prevention, reduction in blood transfusions, more effective cardiovascular and liver surgery, ovarian cryopreservation and stroke prevention and management. Our ‘one medicine, one health’ strategy is built upon the integration of research from bench to bedside and from process to population. We are constantly developing global networks and innovative research opportunities with partner institutions.

Our suite of practical and clinically appropriate online learning qualifications enables students to train in their own countries to deliver the services so desperately needed by their communities. Edinburgh Medical School has more than 1,500 online learning students from 100 countries around the globe.

Interdisciplinary research and high-quality teaching are at the heart of our ethos. Clinical and basic scientists work closely together, linking basic and translational research goals. This allows us to offer you an outstanding educational experience with a wide range of interdisciplinary opportunities and learning outcomes.

Our association with the Royal (Dick) School of Veterinary Studies provides further opportunities for collaboration and interaction. We aim to provide you with all the support and training you require to enhance your careers and allow you to reach your full potential.
Graduate School

Our Graduate School provides an interdisciplinary, college-wide support network for all postgraduate students and staff. It is home to more than 3,100 postgraduate students studying within Edinburgh Medical School or the Royal (Dick) School of Veterinary Studies.

The Graduate School supports and fosters the best possible learning and research environment, working in partnership across our two Schools with the University’s central services to ensure our postgraduate student experience is world-class. It promotes the sharing of good practice across all teaching and research platforms, and aims to ensure that whether you study on campus or online, your academic and pastoral needs are appropriately provided for.

The Graduate School hosts a number of events including the open day and online chat sessions for prospective students, welcome events, and our round of the international Three Minute Thesis competition.

Graduate School Hubs

Whether you’re studying online or in Edinburgh, your programme will belong to one of our Graduate School Hubs. Your Hub will provide you with an accessible point of personal contact – in person, online or by phone – from application to graduation.

Postgraduate students are supported by a team of administrators within their Graduate School Hub. These teams are the first point of contact for our postgraduate students and staff, and support both on-campus and online learning students. As well as supporting all aspects of programme administration, these staff are front-line student support officers for any queries or issues you may have, with the knowledge and experience to direct you to the appropriate resource for additional support.

Hubs are arranged thematically to bring together students working in similar fields. However all students in all Hubs work together as part of the wider Graduate School. Our Hubs are in:

- Biomedical Sciences
- Clinical & Translational Sciences
- Dental Institute
- Edinburgh Neuroscience
- Institute of Genetics and Molecular Medicine
- Usher Institute.

Community

We aim to foster a close community of postgraduate staff and students.

If you study on campus as a masters student, you will work closely with your classmates through tutorials, lectures and seminars, becoming part of a close-knit group over the duration of your programme.

However, distance isn’t a barrier if you choose to study online. Our online-learning postgraduates are a diverse group of students from all over the world, united by their academic interests. Using our award-winning interactive learning environments, our online students and tutors maintain a supportive virtual community that ensures successful online study. If you can’t attend your graduation ceremony in person you can even have a virtual graduation at the same time.

If you are a research student, you will join an individual research centre within the College. Within each centre there are both social and academic opportunities to integrate with the wider postgraduate community, such as through seminar series, team building and development exercises at College and University level or through the University’s Postgraduate Society. Research students are encouraged to get to know each other and interact through a series of induction activities within their Deanery and through campus-based postgraduate societies.

There is a wide range of seminar series and team building and development exercises are available through the Institute for Academic Development. You are encouraged to interact with the wider University postgraduate community through cross School networks such as Edinburgh Neuroscience, Edinburgh Infectious Diseases, and the Edinburgh Immunology Group and by participating in the University-wide Three Minute Thesis competition. You are also encouraged to take part in public engagement events to actively communicate your science outside the University.

Networking spaces are vital in the fostering of a strong community and we are fortunate to have excellent communal spaces for this purpose on all of our campuses.

Joining professional societies can also be beneficial to postgraduate training and affords you membership of a wider academic community. In many cases, societies offer travel grants for students, and membership usually entitles reduced or waived registration fees to society meetings.

You will also have access to all the support services available across the University, including the Careers Service, Edinburgh Global, the Edinburgh University Students’ Association, the independent Advice Place and the Student Counselling Service.

More information:

www.ed.ac.uk/student-services
Research and teaching environment

Each year we support the training of more than 600 research students and 1,500 students undertaking taught programmes on campus or online.

The excellence of our Centres is evidenced by prestigious external funding awards, including four Medical Research Council (MRC) Centres, two British Heart Foundation (BHF) Centres, a Cancer Research UK (CRUK) Centre, an Asthma UK Centre [the Asthma UK Centre for Applied Research], an MRC University Unit (Human Genetics Unit) and a World Health Organisation (WHO) Collaborating Centre on Population Health Research and Training.

Research within the School is organised into four institutes, where clinical and basic scientists interact closely around their basic to translational goals:

Queen’s Medical Research Institute

A world-class clinical research facility, the Queen’s Medical Research Institute (QMRI) has four strategic centres, addressing major disease challenges. Research is broadly focused on normal and diseased cells and inflammation and tissue repair. In QMRI the research emphasis is towards clinical-translational science, from molecules to man and from populations to process. The QMRI hosts six research centres and one research unit:

• Centre for Genomic and Experimental Medicine
• Edinburgh Cancer Research Centre
• MRC Human Genetics Unit.

Edinburgh Neuroscience

Integrating basic and clinical research, Edinburgh Neuroscience advances understanding, diagnostics and therapeutics of diseases of the nervous system. It is a vibrant, integrated, and interdisciplinary research structure launched to facilitate interaction between researchers across groups, centres, schools and colleges, working at all levels of neuroscience from molecules through synapses and networks to cognition and behaviour.

Our major strategic goal has been to bring together psychology, psychiatry and neuroscience to target our basic and translational science, from molecules to man and from populations to process. The ICMM hosts two research centres and one research unit:

• Centre for Population Health Sciences
• Centre for Medical Informatics
• Centre for Global Health Research Edinburgh Clinical Trials Unit.

Networking opportunities

Our cross-campus networks bring researchers together:

• Edinburgh Data Science
• Edinburgh Drug Discovery
• Edinburgh Genomics
• Edinburgh Imaging
• Edinburgh Infectious Disease
• Edinburgh Neuroscience

Edinburgh Imaging

Edinburgh Imaging is a virtual hub of expertise on medical imaging, preclinical imaging, neuroimaging for research, microscopy and imaging science education. The Institute of Genetics & Molecular Medicine (IGMM)

One of the largest centres worldwide for human genetics and human medicine, the Medical Research Council Institute of Genetics & Molecular Medicine at the University of Edinburgh has more than 500 research and support scientists. By pooling the resources and complementary skills of partner centres and units, the ICMM brings together distinct expertise that maximises scientific discovery and translation of science. The ICMM broadly focuses on genes and populations, and normal and diseased cells to study development and disease mechanisms. The partner centres and units are grouped strategically to exploit common strengths in genetic and genomic analysis, and protein, cell and tissue regulation in disease, with emerging emphasis on innovative basic and translational science, from molecules to man and from populations to process. The ICMM hosts two research centres and one research unit:

• Centre for Cognitive and Neural Systems
• Centre for Clinical Brain Sciences
• Centre for Integrative Physiology
• The Euan MacDonald Centre for Motor Neurone Disease
• The Muir Maxwell Epilepsy Centre
• The Patrick Wild Centre.

The Institute of Population Health Sciences and Informatics

Conducting transformative research that impacts upon healthcare, the Institute of Population Health Sciences and Informatics improves the health and wellbeing of patients, communities and populations locally and globally. The Institute brings together a critical mass of researchers with expertise in epidemiology, statistics and modelling, informatics, computer science, clinical science, sociology, social policy, governance, ethics, politics, medical law, psychology, economics, geography, health promotion and medicine to create a truly interdisciplinary research institute. The Institute includes space within Building 9 at Edinburgh Bioquarter, Little France and at Teviot Place, in the Central Area.

The Institute hosts three research centres and one unit:

• Centre for Population Health Sciences
• Centre for Medical Informatics
• Centre for Global Health Research Edinburgh Clinical Trials Unit.

Facilities

We cater for our wide range of disciplines with extensive facilities and critical investment in order to create the perfect environment for discovery.

Our facilities include:

• Edinburgh Medical School, next to the Royal Infirmary of Edinburgh at Little France;
• the Queen’s Medical Research Institute, which houses three world-class medical research centres and more than 800 researchers;
• the Institute of Genetics & Molecular Medicine, home to around 500 world leading medical researchers;
• Edinburgh Neuroscience, one of the largest neuroscience groupings in the world;
• Clinical Research Imaging Centre;
• the Wellcome Trust Clinical Research Facility with trials and clinical research governance support units;
• recently refurbished, pre-clinical research centres on the central campus;
• the latest imaging technologies;
• the Scottish Centre for Regenerative Medicine, based at our Little France campus;
• Edinburgh BioQuarter, a major medical research commercialisation initiative, also at our Little France campus;
• the Usher Institute of Population Health Sciences and Informatics newest institute, based at our Little France campus and the Central Area campus.

Collections of the University

The University of Edinburgh has one of the world’s great collections, which has been growing ever since its foundation in 1583. Our collections include rare books, archives and manuscripts, art, historical musical instruments and a wide range of museum objects from geological specimens to anatomical models. If laid out end to end, we would have almost 60 kilometres of shelving and storage space devoted to our heritage material, from 1st-century Greek papyrus fragments to new works of sculpture. This is curated by specialist staff across 45 sites and used for our teaching and research and by the wider public community.

The Centre for Research Collections in the Main Library is the hub for all our collections, where specialist curators make them available for study, research and pleasure. Postgraduate students are welcome to study original objects and have made many important research discoveries while working on the archives. You will find an incredible range of material in our collections that is available nowhere else in the world.
Employability and graduate attributes

The University is here to support you in the successful completion of your postgraduate training and to prepare you for your career. We provide information and advice on how to plan your career and develop the skills you will need now and in the future.

Throughout your postgraduate studies we support you with advice and training on effective study, exams and assignments, numeracy and data analysis, specific postgraduate writing skills, and finding and using academic sources. We offer learning opportunities to develop your information and IT skills, for personal development and to help you work, study and research more effectively.

We run a series of workshops for taught masters students, specifically: Masters Study Skills, Group Working, Essay Planning and Writing. Our research students can develop their planning skills, professional development, communication and IT skills through a wide range of courses developed specifically with the medical and veterinary medicine sectors in mind.

Institute for Academic Development
All postgraduate students can benefit from our Institute for Academic Development (IAD), which provides information, events and courses to develop the skills you will need throughout your studies and in the future. IAD events also offer the perfect opportunity to meet and network with other postgraduates from across the University.

Further information is available online: www.ed.ac.uk/iad/postgraduates

For taught postgraduates, IAD provides a popular study-related and transferable skills support programme. It is designed to help you settle into postgraduate life, succeed during your studies and move confidently to the next stage of your career. We offer on-campus and online workshops and one-to-one study skills consultations, plus online advice and learning materials. Workshops and learning resources cover key topics tailored to different academic stages, including getting started with your studies; critical reading, writing and thinking; managing your exams; and planning for and writing up your dissertation.

IAD also provides a comprehensive programme of transferable skills training, resources and support for researchers completing a doctorate. The workshop programme is designed to help you successfully prepare for the various milestones of your PhD, from getting started with your research, to writing up and preparing for the viva. Workshops cover topics such as writing skills, reference management tools, statistics, preparing for conferences, delivering presentations, time and project management, and personal development. IAD also offers online resources and planning tools to help get your research started, plus support for tutoring and demonstrating, and research public engagement and communication.

Careers Service
Our Careers Service plays an essential part in your wider student experience at the University, offering a range of tailored careers and personal development guidance and support. We support you to recognise the wealth of possibilities ahead, while at university and after graduation, helping you explore new avenues, tap into your talents and build your employability with confidence and enthusiasm.

We provide specialist support for postgraduate students. From exploring career options to making decisions, from CV writing to interview practice, from Employ.ed internships to graduate posts and from careers fairs to postgraduate alumni events, we help you prepare for the future.

We sustain and continually develop links with employers from all industries and employment sectors, from the world’s top recruiters to small enterprises based here in Edinburgh. Our employer team provides a programme of opportunities for you to meet employers on campus and virtually, and advertises a wide range of part-time and graduate jobs.

More information: www.ed.ac.uk/careers/postgrad

Connect.ed
Edinburgh encourages its alumni to stay in touch with current students who share an academic background or are interested in a similar career path. Connect.ed is a networking system run by the Careers Service that provides an informal and confidential opportunity for alumni to share their occupational knowledge and experience with current students, who can contact them for advice and guidance on their future career.

More information: www.ed.ac.uk/careers/connected

Backing bright ideas
LAUNCH.ed is the University’s award-winning programme for student entrepreneurs. Each year, LAUNCH.ed works with hundreds of students to assess their ideas and develop their business skills and helps many start their businesses. We have helped Edinburgh students and alumni launch almost 100 new businesses in the last three years, ranging from language tuition to robotics companies.

More information: www.LAUNCH.ed.ac.uk

Eurolife postgraduate student exchange visits

The College of Medicine & Veterinary Medicine is a member of the Eurolife consortium, which comprises eight European, research-led, life sciences universities. Established in 1999, Eurolife promotes transnational interactions via research collaboration, postgraduate programmes and student mobility programmes. Eurolife offers you the opportunity to undertake learning and/or research in another leading European university, while gaining new contacts, skills and experience.

The eight Eurolife universities are:
• The University of Edinburgh, College of Medicine & Veterinary Medicine
• Karolinska Institute, Sweden
• School of Medicine, Trinity College, Dublin, Ireland
• Leiden University Medical Center, Netherlands*
• University Medical Center, Göttingen, Germany
• University of Barcelona, Spain*
• Medical University of Innsbruck, Austria*
• University of Strasbourg, France*

*This institution does not offer tuition in the English language.

Typically, Eurolife student exchange visits are for up to six months, to undertake masters-level course modules and/or a research project. Normally each institution will accept exchange visits by up to two students from each partner institution per academic year. Eurolife student exchange visits do not incur tuition fees. Students intending to undertake an exchange visit should contact the College Research Officer by email, mmsresearch@ed.ac.uk, at least seven months in advance of a proposed visit start date, to discuss submitting an application.

More information: www.ed.ac.uk/medicine-vet-medicine/ eurolife

Global Health Academy

The University’s Global Health Academy draws on a wide range of expertise, crossing all boundaries in global health. Because global health is not one single discipline, but multiple disciplines cutting across traditional institutional functions and boundaries, the University has brought together world-class research drawn from numerous academic areas in order to deliver a greater impact. For example, public health and clinical physicians work closely with our leading anthropologists, biomedical scientists, epidemiologists, geographers, health economists, management specialists, mathematicians, political scientists and sociologists. The umbrella of the Global Health Academy also extends outwards to specialists across the globe who wish to lend their expertise to our training, teaching or research for shorter or longer periods.

More information: www.ed.ac.uk/global-health
Applications and fees

We have an online application process for all postgraduate programmes. It’s a straightforward system with full instructions, including details of supporting documentation you need to submit.

When applying, you will set up an account, which lets you save your application if you wish to continue and submit your application at another time. Full guidance on our application system is available at: www.ed.ac.uk/postgraduate/applying

General requirements

Usually a UK 2:1 honours undergraduate degree, or its international equivalent (www.ed.ac.uk/international/admissions), in a subject related to your chosen programme. You will also need to meet the University’s language requirements (see below). Entry requirements for individual programmes can vary, so check the details for the specific programme you wish to apply for.

References

For applications to taught programmes, the normal requirement is one reference, although an additional reference may be requested in individual cases, for applications to research programmes, two references are required. You should check the entry online for exact requirements for your intended programme of study. For general guidance on references, visit: www.ed.ac.uk/postgraduate/references

Deadlines

Online and on-campus taught programmes

The deadline for online learning programmes is usually late August but varies from programme to programme. The deadline for on-campus taught masters is 1 August. Programmes with especially high competition for places may have earlier closing dates. Please check online for details.

Research programmes

For many research programmes, you can start at any time of year – check with the particular programme for further information on start dates. College studentships are usually advertised in November, with a January or February deadline, for programmes that will start the following September.

English language requirements

Students whose first language is not English must show evidence of one of the qualifications listed below.

Biomedical Sciences (Life Sciences), Public Health (including online Learning), Science Communication & Public Engagement (including online Learning), Transfusion, Transplantation & Tissue Banking, and all programmes offered by the Postgraduate Dental Institute

• IELTS Academic: total 7.0 (at least 6.5 in each module).
• TOEFL-iBT: total 100 (at least 23 in each module).
• PTE(A): total 61 (at least 56 in each of the Communicative Skills sections: the Enabling Skills sections are not considered).
• CAE and CPE: total 176 (at least 169 in each module).
• Trinity GESE: ISE II (with distinctions in all four components).

Please note:

• English language requirements can be affected by government policy so please ensure you visit our degree finder to check the latest requirements for your programme: www.ed.ac.uk/postgraduate/degrees
• Your English language certificate must be no more than two years old at the beginning of your programme.
• We also accept recent degree level study that was taught and assessed in English in a majority English-speaking country (as defined by UK Visas & Immigration).

Abbreviations: IELTS – International English Language Testing System; TOEFL-iBT – Test of English as a Foreign Language Internet-Based Test; PTE(A) – Pearson Test of English (Academic); CPE – Certificate of Proficiency in English; CAE – Certificate in Advanced English; Trinity ISE – Integrated Skills in English.

www.ed.ac.uk/english-requirements/pg

Tuition fees

The following table provides an overview of indicative fee levels for programmes commencing in 2018.

For international tuition fees, your programme may be subject to an application fee and additional costs. For details, please check the latest programme information online.

Tuition fees for EU students

EU students enrolling in the 2018/19 academic year will be admitted as Scottish EU fee status students. Taught masters students will be eligible for the same tuition support as Scottish domiciled students from the Student Awards Agency for Scotland (SAAS).

For UK/EU students

The following table provides an overview of indicative fee levels for programmes commencing in 2018.

Figures marked * show the fee level set for 2017/18 academic year. All other figures are indicative of expected fee levels for your studies during the 2018/19 academic year. Because these figures are indicative, it is important you check online before you apply and check the up-to-date fee level that will apply to your specific programme: www.ed.ac.uk/student-funding/tuition-fees/postgraduate

For international students

All taught programmes £20,500–£25,100

Exempt:

Transfusion, Transplantation & Tissue Banking FT

Regenerative Medicine: Clinical & Industrial Delivery FT

MClindent/DClindent

£3,950

All MPhil 4-years FT £2,098*

All MSc by Research/MMedSci by Research 3-years FT

- Julius Nyere Masters Scholarship in Tanzania •
One scholarship is available to citizens of Tanzania who are normally resident in Tanzania who are accepted on a full-time masters programme: www.ed.ac.uk/student-funding/nyere
- Polish School of Medicine Memorial Fund •
This scholarship enables medical scientists, normally medical doctors at the outset of their careers and working in Polish medical universities, to undertake a period of further study or research at the University and return to their home institution in Poland: www.ed.ac.uk/student-funding/polish-medicine
- Welcome Trust PhD Awards •
The Welcome Trust offers bursaries to support applicants studying Translational Neuroscience or Tissue Repair. These scholarships cover UK/EU tuition fees and a stipend: www.edneurophd.ed.ac.uk www.tissuerepairphd.ed.ac.uk
- Research council awards •
Research council offers award a number of PhD students in medical Schools within the University of Edinburgh. All scholarship applications from the research councils must be made through the University, through your School or College office. Awards can be made for both taught and research programmes.

Loans available for study at the University of Edinburgh •
The University of Edinburgh offers a participating institution in the following loan programmes, meaning we can certify your student status and can help with the application process.
- The Canada Student Loans Program •
The University is eligible to certify Canadian student loan applications: www.ed.ac.uk/student-funding/canadian-loans
- Erasmus+ •
The Erasmus+ Master Loan helps masters students with their living and tuition costs when studying in an Erasmus+ country other than where they live or where they took their first degree. For more information: https://erasmusplus.org.uk/master-loan
- Postgraduate Loans (PGL) •
- England •
Student Finance England offers postgraduate loans for taught and research masters programmes, payable to eligible students: www.gov.uk/postgraduate-loan
- Postgraduate Loans (PGL) •
- Northern Ireland •
Student Finance Northern Ireland offers a tuition fee loan for taught and research programmes, at certificate-, diploma-, and masters-level, which will be paid directly to the University: www.studentfinance.ni.co.uk
- Postgraduate Loans (SAAS) •
Scotland and EU •
The Student Awards Agency Scotland offers tuition fee loans for taught diploma and masters programmes which will be paid directly to the University. Full-time students resident in Scotland can also apply for a non-income assessed living cost loan: www.sas.gov.co.uk
- Postgraduate Loans (PGL) •
- Wales •
Student Finance Wales offers eligible students postgraduate loans for taught and research masters programmes: www.studentfinancewales.co.uk
- US Student Loans •
The University is eligible to certify loan applications for US loan students. Full details on eligibility and how to apply can be found online: www.ed.ac.uk/student-funding/us-loans

Other sources of funding •
The following are examples of the many scholarships and support schemes available to students from particular countries who meet certain eligibility criteria.
- Chevening Scholarships •
A number of partial and full funding scholarships are available to one year masters students: www.chevening.org
- Colt Foundation Fellowships in Occupational/Environmental Health •
The Colt Foundation supports high-quality research projects in the field of occupational and environmental health, particularly those aimed at discovering the cause of illness arising from conditions in the workplace. The Foundation makes a number of grants each year to PhD students who are investigating topics relevant to this field of research: www.ed.ac.uk/student-funding/colt
- Commonwealth Scholarships •
Scholarships available to students who are resident in any Commonwealth country, other than the UK: www.gov.uk/studentscholarships
- Marshall Scholarships (USA) •
Scholarships available to outstanding US students wishing to study at any UK university for at least two years: www.marshallscholar.org
- Scotland’s Saltire Scholarships •
A number of scholarships open to students who are citizens permanently and ordinarily resident in Canada, China, India, Pakistan and the USA for one year of masters study: www.ed.ac.uk/student-funding/saltire

Funding for online learning •
The University offers several scholarships specifically for online, part-time postgraduate study students, including the Edinburgh Global Online Distance Learning Masters Scholarship, for which applicants to many of our masters programmes can apply: www.ed.ac.uk/student-funding/ e-learning/online-distance

"I chose Edinburgh because of its complete package. The University allows me to pursue my passion with cutting-edge equipment and facilities, with some of the brightest minds in their field, all within this amazing and beautiful city." Jason Weiss, PhD Molecular and Clinical Medicine, Edinburgh Global Research Scholarship

Awards are offered by the College of Medicine & Veterinary Medicine, the University of Edinburgh, the Scottish, UK and international governments and many funding bodies.

Within the School, 79 per cent of research students received funding for their tuition fees in 2016/17. However, the majority of taught students are self-funded although there are some funding packages available for both on-campus and online learning students.

Here we list a selection of potential sources of financial support for postgraduate students applying to the College of Medicine & Veterinary Medicine. This list was correct at the time of printing but please check the full and up to date range online (see above).

Tuition fee discounts •
We offer a 10 per cent discount on postgraduate fees for alumni who have graduated with an undergraduate degree from the University. We also offer a 10 per cent discount for international graduates who spent at least one semester at the University of Edinburgh as a visiting undergraduate: www.ed.ac.uk/student-funding/discounts

Visit us
Our Postgraduate Open Day is your opportunity to come and meet current staff and students. Our next campus-based Open Day takes place on Wednesday 15 November 2017. For more information, visit:
www.ed.ac.uk/postgraduate-open-day

Our visits to you
If you are unable to visit the University, we attend events throughout the year so you can meet and speak to us in person.

UK and Europe: www.ed.ac.uk/postgraduate/uk-eu-events
International: www.ed.ac.uk/international/our-visits-overseas

Chat online
We offer all postgraduate students monthly online information sessions. To find out more and see when the next session will be:
www.ed.ac.uk/postgraduate/online-events

For international students, Edinburgh Global runs two online chat sessions each month. These are timed to give students in all timezones a chance to get involved. You can find out more and register online:
www.ed.ac.uk/international/chat-to-us-online

“You are now in a place where the best courses upon Earth are within your reach … such an opportunity you will never again have.”
Thomas Jefferson, American Founding Father and President (speaking to his son-in-law, Thomas Mann Randolph, as he began his studies at Edinburgh in 1786)
This publication is available online at [www.ed.ac.uk/postgraduate](http://www.ed.ac.uk/postgraduate) and can be made available in alternative formats on request. Please contact communications.office@ed.ac.uk or call +44 (0)131 650 2252.
