

Dog Welfare Assessment App: Using the scorecard and data

The Dog Welfare Assessment app has been developed to allow you to self-assess the welfare of dogs in your CNR (catch neuter return) programme. This is important in order to identify potential problems and take corrective action, to ensure that dog welfare is as positive as it can be.

You can access the data you have collected by using the **scorecard** and selecting the stage you want to review.

The scorecard provides a **response** for each indicator and highlights where you have done well or where improvements could be made. This can be useful to your centre/organisation.

You can also download a csv (excel) file of your data by selecting a **date range and download**. The data will be emailed to you. You can then use the data for your own reporting purposes or analysis.
