

KEY

- OS grid reference point
- Site boundary
- Internal views
- External views

- 1. Dumyat**
Much of the site is hidden from view from the summit of Dumyat, but some northern parts are visible. There are attractive views available from the informal route north of the core path, as the path descends to Sherrifmuir Road, with views focused towards Cocksburn Reservoir and Ben Lomond beyond.
 - 2. Dumyat Path**
Panoramic views over a large swathe of Central Scotland are available from long stretches of the core path leading to Dumyat, with the width of the view increasing with altitude, taking in a broad sweep from Berwick Law, through Tinto, to Ben Lomond. The rising topography north of the path prevents views towards the Highlands.
 - 3. Scheduled Monuments**
The three scheduled bronze age/Neolithic monuments on the western hillside are intervisible, and the locality provides expansive views, notably to the west, along the upper Forth valley, and eastwards towards Dumyat's summit.
 - 4. Stirling Castle**
The southern slopes and higher ground on Drumbrae form the backdrop of views to the Wallace Monument, with Dumyat and the western Ochils forming the skyline above the site. Similar, if more restricted views, are available from much of the area around Stirling.
 - 5. The Carse**
The steep southern slopes of Drumbrae are highly visible from the Carse of Forth and higher land to the south, with Dumyat itself being visually dominant. The hill's western ridge forms the skyline, and Yellowcraig Wood and the gorse-covered slopes provide visual diversity.
 - 6. Sherrifmuir**
Views onto the northern parts of Drumbrae, including the Wharry Burn valley, are readily available from the road to Sherrifmuir. The existing woods on Ashentrool and Pendriech enclose the site. The slopes below the Standing Stone are prominent, with the northern slopes of Dumyat visible beyond. The pylon line forms a major visual detractor.
 - 7. Sherrifmuir Road**
While views northbound from the road are largely restricted to the short-distance, more expansive views are available southbound, encompassing the rolling landforms on either side of the road, and taking in the northern, upper, slopes of Dumyat.
 - 8. M9 Motorway**
As the M9 passes Stirling, unobstructed views onto Drumbrae's western flanks are available, with the site being framed by Pendriech Forest and Yellowcraig Wood below, and by Dumyat and Loss Hill above.
- Residential Properties**
Due to its low-lying location, there are no real viewpoints onto Drumbrae from Bridge of Allan, but higher parts of Dunblane have distant views onto the site's western slopes. There are no houses in the vicinity of the site with any degree of visibility.
- The Ochils**
The Dumyat area is a key entry point to the Ochils, but beyond Dumyat, there are very few locations in the hills that have any visibility of Drumbrae.
