reunion (ri:'ju:njən) *n.*
A gathering of relatives,
friends or former associates.

Sounds like fun! And that's what reunions should be – enjoyable, individual, memorable. But like all successful meetings there's a great deal of planning and organisation involved, and that's where we come in.

At the Peebles Hydro we've a wealth of experience in working with universities, arranging and holding a variety of reunions. This enables us to provide you with plenty of ideas, take a lot of the burden of organisation off your shoulders, and ensure everything is 'alright on the night'. In fact, we can take care of all the details from programmes and place cards to menus and themed events.

On top of that, the Hydro is the perfect venue – a stunning Borders location and a range of leisure facilities that has something for everyone.

If you're planning a reunion why not give us a ring? We'll be delighted to use all our experience to ensure your event is something just that little bit special, and also less work for you.

Please contact: Gerard Berry,
Peebles Hotel Hydro, Peebles EH45 8LX.
Tel: 01721 720602. Fax: 01721 722999.

'THE UNIVERSITY OF EDINBURGH *collections*

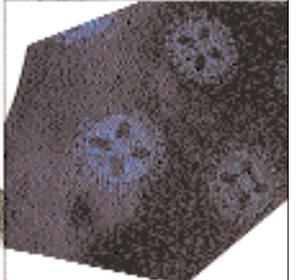

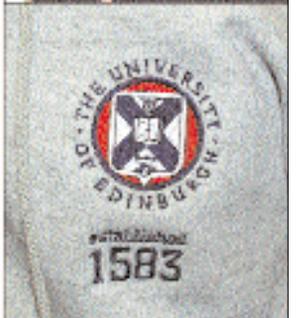

For over 400 years, the University of Edinburgh has been leading the world in academic research and teaching. Reflecting that reputation for excellence, The University of Edinburgh Collections offer a unique range of classic merchandise with a contemporary feel.

Whether you're looking for a reminder of your time here or a gift for family or friends there's something for everyone.

Visit us online at www.giftshop.ed.ac.uk

Ordering online couldn't be simpler or more secure – all you have to do is choose what you want, then an account will be created for you, and we will take care of the rest.

You can also visit our shop in person at The University of Edinburgh Centre, 7–11 Nicolson Street, Edinburgh EH8 9BE or telephone +44 (0)131 650 2252.

contents

Welcome to the summer 2004 edition of *Edit*. Thanks to all of you who commented so positively on our new look.

In this issue, Iain Macwhirter gives his view on Dr Hans Blix's lecture at the University in February and the conflict in Iraq. McEwan Hall was filled to capacity with students, members of staff and the public.

Raising aspirations (page 18), by Dr Neil Speirs, looks at the first stage of a Widening Participation project which is changing attitudes to Higher Education in traditionally low-participation areas. The project was made possible through a Development Trust grant, which is funded by your donations to the University.

Also included are all of our regular features about alumni and development, letters and the *Billet* section from the General Council.

For the first time, *Edit* is available as a text-only version. You can download the file from www.cpa.ed.ac.uk/edit/, or contact us at: *Edit*, Communications & Public Affairs, The University of Edinburgh Centre, 7-11 Nicolson Street, Edinburgh EH8 9BE, or email Edit.Editor@ed.ac.uk

Scottish scientists target selected ovarian cancers

Targeting and inactivating a key gene could be a subtle and effective treatment for certain types of ovarian cancer, University researchers suggest in a study published in *Clinical Cancer Research*.

Cancer Research UK scientists at the University found that blocking a gene called Raf-1 can halt the growth of some ovarian cancer cells while leaving others largely unaffected. Their findings could lead to selective cancer therapies tailored to individual patients.

Researchers also gained important clues about why targeting the gene was effective in some types of cancer but not in others, paving the way for a test to predict which patients would benefit from the treatment.

Will Garton (President of EUSA) & Principal and Vice-Chancellor Professor Timothy O'Shea

Fairtrade comes first at Edinburgh

Edinburgh was the first university in Scotland to be formally awarded Fairtrade accreditation at a reception at the University in March. The award was made on the same day that Edinburgh became a Fairtrade city.

The reception was held at Teviot Row House, and was attended by the Principal and Vice-Chancellor Professor Timothy O'Shea; the President of Edinburgh University Students' Association (EUSA), Will Garton; the Managing Director of the Fairtrade Foundation, Harriet Lamb and the Chairman of the Toledo Cacao Growers' Association in Belize, Justino Peck.

The commitment to the Fairtrade initiative is supported by staff and students alike. Professor Geoffrey Boulton, Vice-Principal of the University said: "We are delighted with the recent moves to make Edinburgh Scotland's first Fairtrade University. The University already uses Fairtrade tea and coffee as their default choice and we fully support the Students' Association

in their bid to extend the range of Fairtrade products that we offer on campus. The move to gain official Fairtrade status recognises the University's long-term commitment to the use of Fairtrade products and contributing to better conditions for many farmers and communities in developing countries."

Will Garton said: "The University is a major consumer of food and drinks. Last year EUSA purchased over 1,700kg of coffee and the University's accommodation services served around 300,000 cups of coffee a year to staff, students and commercial clients. A wide range of Fairtrade products is available and prominently displayed throughout the University and even Fairtrade wine is on the way to becoming the default option across the board."

Some 6,000 events took place around the UK during Fairtrade Fortnight (1-14 March), which commemorated the tenth year of the Fairtrade Mark.

Prestigious awards for University academics

The Norwegian Academy of Science and Letters has awarded the Abel Prize for 2004 jointly to Sir Michael Francis Atiyah, University of Edinburgh and Isadore M. Singer, MIT.

They will receive the prize “for their discovery and proof of the index theorem, bringing together topology, geometry and analysis, and their outstanding role in building new bridges between mathematics and theoretical physics.”

The Abel Prize was established in 2002 as an international prize for outstanding scientific work in the field of mathematics. This award fills the gap where there is no Nobel Prize for Mathematics.

Jane Hillston, a Reader in Computer Science from the University's School of Informatics, is the first winner of the newly-created Roger Needham Award for outstanding British computer research. She has received the award for her work on Performance Evaluation Process Algebra. Hillston created a revolutionary new software modelling language that predicts performance-related problems at software design stage.

SHEFC funding

The University has been awarded an increase of £7.3 million in SHEFC's funding round for the academic year 2004/05, raising total funding to £121.8 million.

The 6.4% rise is well above the Scottish average of 5.3%, with research funding particularly benefiting with an increase of 12.1%. This is a modest increase in real terms, after a number of years in which the University has received real terms cuts.

“ This welcome increase in funding will go some way towards ensuring the University of Edinburgh keeps its research at an internationally competitive level.”

Scottish higher education institutions will receive more than £800 million – an overall sector increase in funding of 5.5% on last year.

Edinburgh, along with St Andrews, has the largest percentage increase of any of the Scottish universities. The total 6.4% rise disguises significantly larger increases in Main Quality Research Grant (11.9%) and Knowledge Transfer Grant (50.3%), which recognise the University's excellent track record in these activities, and which are a very welcome indication of Scottish Executive and SHEFC support.

Professor Timothy O'Shea, Principal and Vice-Chancellor said: “We are very encouraged by the Chief Executive of SHEFC, Roger McClure's announcement and the commitment that the Executive and the Deputy First Minister, Jim Wallace has shown to the sector. This university's 6.4% overall increase and the 12.1% increase in research funding in particular are positive signs for a smart, successful Scottish strategy. This welcome increase in funding will go some way towards ensuring the University of Edinburgh keeps its research at an internationally competitive level.”

The University's Main Teaching Grant will be £71.5 million compared to £69.5 million in 2003/04, an

increase of 2.8%. Units of resource for teaching are being increased by 2.7%, compared to HEFCE's 2.8% increase.

Main Quality Research Grant (R-grant) rises by 11.9% to £44.1 million. The one-off grant for 5* units of assessment in 2003/04 has been consolidated into baselines, and the weighting for 5/5*-rated units has been significantly increased compared to units rated rising 3a and 4.

Cannabis can lead to cigarette smoking

A University study has found that the use of cannabis by teenagers can act as a trigger to smoking cigarettes, or can reinforce the habit in those who already smoke. The study was undertaken by Research Fellow Dr Gill Highet of the University's Research Unit in Health, Behaviour and Change. Although it was previously known that most cannabis users also smoke tobacco, this new study of 59 young people aged 13-15 from the east of Scotland shows that the reverse can also be true, with cannabis introducing young people to smoking cigarettes. Some began smoking cigarettes when cannabis was not available, or to conserve their supplies of the drug.

JK Rowling and former Principal among honorary graduates

Best-selling children's author JK Rowling is among a number of prominent public figures who will receive honorary degrees at the University's graduation ceremonies this summer.

Ms Rowling, who completed the PGCE at Moray House – now the Moray House School of Education at the University – in 1996, will receive the degree of Doctor *honoris causa* in July. She said, "I am delighted and honoured to be receiving an honorary degree from the University of Edinburgh, in my adopted home city."

Former Principal and Vice-Chancellor of the University, Rt Hon Lord Sutherland of Houndwood will also receive the degree of Doctor *honoris causa*.

Evelyn Glennie OBE, the world-renowned solo percussionist,

will receive the degree of Doctor *honoris causa*. Cardinal Keith Patrick O'Brien, Roman Catholic Archbishop and Metropolitan of the Archdiocese of St Andrews and Edinburgh and Primate of the Roman Catholic Church in Scotland will receive the honorary degree of Doctor of Divinity. The Cardinal graduated with a BSc from the University in 1959.

For a full list of honorary graduates visit www.ed.ac.uk/news/honorary04.html

Thank you

Legacy gifts from graduates
£72,000 to the University of Edinburgh Development Trust from the late Mr Hans Silberstein BSc 1945 (Mechanical Engineering)

£1,000 to the University of Edinburgh Development Trust from the late Dr Keith Morris MB ChB 1934

£500 to the University of Edinburgh Development Trust from the late Sir James Waddell MA 1935 (History)

Legacy gifts from non-graduates
£218,323 to the Royal (Dick) School of Veterinary Medicine from the late Miss Muriel Sutherland

£74,857 to the Koestler Parapsychology Unit from the late Mrs Denwyn Dobby

£1,000 to the College of Medicine for the Department of General Practice from the late Miss Jane Paterson

£500 for cancer research from the late Mr Stanislaw Wozniak

In brief: Vice-Principal **Professor Geoffrey Boulton** has been appointed by the Prime Minister to the Council for Science and Technology. The Council is the top-level advisory body for Science and Technology in the UK, and reports directly to the Prime Minister and to the chief ministers of devolved administrations.

Professor Michael Banner will join the University from King's College London, to be Director of the ESRC Genomics Research Forum. Professor Banner is well known in science and public policy arenas.

Robin Cook unveils portrait bust

University alumnus Rt Hon Robin Cook MP was in Old College in January to unveil and accept a portrait bust of himself on behalf of the University. Sculptress Shenda Amery donated her portrait bust of the MP, who studied English Literature at the University.

The bust will be displayed in the School of Literatures, Languages and Cultures. Robin Cook said: "I hope he will be as happy in the English department as I was."

Shenda Amery is famous for her portrait busts of leading political and media figures and her works include busts of Cherie Blair, John Major, Margaret Thatcher and Kate Adie.

Falling in love: how does it happen?

The hormone which helps bond a mother and her baby, also released during both childbirth and orgasm, seems to act like a master switch in the brain, one of our scientists revealed at a St. Valentine's Eve lecture in London.

Neuroscientist Professor Gareth Leng examined how oxytocin in the brain helps to forge permanent ties between lovers, following the initial rush of excitement of a new relationship. The hormone works by opening up new patterns of interaction between nerve cells and changing the 'wiring' of billions of circuits in the brain. People who have fewer of the special brain receptors needed to take up the oxytocin may have difficulties in making successful permanent bonds with their partners. This hormone, released into the brain in large amounts during labour and also during sexual activity, is an important trigger of maternal behaviour in animals. Its crucial role in sexual bonding has been observed by North American

scientists studying the prairie vole (above).

Professor Leng says: "The prairie vole is a highly social creature – quite unlike its near relative, the montane vole. The prairie vole mates for life and this lifelong bond is established over the 48 hours of intense mating activity that is its first experience of sex. During this time, large amounts of oxytocin are released within the brain. Prairie voles, unlike the montane voles, have oxytocin receptors in different parts of their brains, and scientists have found that blocking these receptors prevents the formation of pair-bonding in females.

"How a single, albeit prolonged exposure to oxytocin can produce such profound and prolonged changes in behaviour is not known, but we are trying to find answers. Understanding this process is essential to understanding how drugs can influence mood and behaviour, for good or bad."

MBE for Old College receptionist in New Year Honours

Gladys Davis

Old College receptionist, Gladys Davis, was awarded an MBE in the 2004 New Year Honours List for services to education. Also recognised are Professors William George Hill and Gordon Kirk.

Gladys has served the University for more than 25 years, during the terms of office of four Principals and three Secretaries, working in various posts before taking up her present job 17 years ago.

Professor William Hill

Professor William Hill, FRS, FRSE, Emeritus Professor of Animal Genetics, is awarded an OBE for services to science and the livestock industry. He was appointed Head of the Department of Genetics in 1989, later becoming Head of the Institute of Cell, Animal & Population Biology and the Division of Biological Sciences, before being appointed Dean and Provost of the Faculty of Science and Engineering.

Professor Gordon Kirk

Professor Gordon Kirk is awarded an OBE for services to teacher education. After serving as a secondary school teacher and lecturer in Education, Professor Kirk was appointed Principal of Moray House Institute of Education in 1981, becoming Dean of the Faculty of Education following the merger of Moray House with the University in 1998.

Eastern European students benefit from Coca-Cola scholarships

Olya Dovgodko, from the Ukraine, and Jan Naszewski, from Poland, are the first students to benefit from a \$1 million scholarship donation received from The Coca-Cola Foundation last year. The donation will enable 10 students over five years to take up undergraduate courses in any subject at Edinburgh.

This photograph, taken on a snow-swept Calton Hill in February, was commissioned to help publicise the scholarship in participating countries in Eastern Europe. For further information, visit the University's Scholarship website at

www.scholarships.ed.ac.uk

For all the latest University news, visit the monthly eBulletin at www.ed.ac.uk/news/ebulletin

The University and the City: working together

The University and the City of Edinburgh Council hosted a presentation to councillors and senior officials at the City Chambers in January.

The aim was to continue to strengthen the University's close working relationship with the council and be actively engaged with the city. Issues raised included the University's role in building a successful knowledge economy through its involvement in areas such as informatics and biotechnology research, knowledge transfer, the commercialisation of discoveries and students' interaction with the local community.

Donald Anderson, Leader of the Council, chaired the event and the first presentation was by Brian Farrell who outlined the council's vision for the city and the consequent funding issues.

The Principal detailed the University's strategy and the contribution it makes to the city. Angus Currie, Director of Estates and Buildings, followed with the University's estate development plans and Will Garton, EUSA President rounded the presentation off with the student contribution to the community.

Nearly 30 councillors and senior officials attended from the council, including the Lord Provost Lesley Hinds who also sits on the University Court.

Edinburgh to lead landmark European initiative in stem cell research

Scientists from throughout Europe met in Edinburgh in February for the launch of an £11.9 million EU-funded research project that will establish foundations for future clinical trials of stem cell therapies. The four-year project – EuroStemCell – involves 14 organisations from eight European countries and will be coordinated from the Institute for Stem Cell Research at the University.

Stem cells may hold the key to replacing damaged tissue in devastating diseases such as Parkinson's and muscular dystrophies, but more basic information about stem cells is required before they can be tested

in the clinic. The trans-European research effort will undertake to obtain this knowledge for different types of stem cell and investigate their potential for treating degenerative diseases. The project also aims to promote the development of a European stem cell bio-industry that can compete effectively with North America and Japan.

EuroStemCell is funded through the European Commission Sixth Framework Programme and more specifically the priority on Life Sciences, Genomics, and Biotechnology for Health, which aims to advance medicine and quality of life for European citizens.

Hive of activity in Hong Kong

Hong Kong has been a hive of activity for the University in recent months. In February, Vice-Principal Geoffrey Boulton was guest of honour at a reception organised by the Hong Kong Alumni Association. The event attracted over 25 graduates, including 11 young alumni who were attending their first Hong Kong Alumni Association event. Professor Boulton was visiting Thailand and the Middle East on University business and made a 24-hour stop-off in Hong Kong to attend the event.

In March, Principal Timothy O'Shea took time out from a conference visit to meet with Hong Kong alumni. A small dinner was organised in his honour by alumni from the Chinese University of Hong Kong – organisers of the Principal's conference – and a plaque commemorating his first visit as Vice-Chancellor to the island was presented.

Staff from Development & Alumni accompanied Principal O'Shea and Vice-Principal Boulton to underpin the University's fundraising ambitions in China, which include the development of the China and Hong Kong Scholarship. The Scholarship Fund, which was launched in 2002 and finances awards of up to £11,000 a year, provides Chinese students with an opportunity to study a Masters course in any discipline at the University and is supported largely by alumni.

Scientists make stout defence for case that Guinness bubbles sink

The University made headlines around the world on St Patrick's Day with a story guaranteed to get drinkers staring into their pint...

It's a baffling sight which has caused countless Guinness drinkers to question whether their judgement might be clouded – bubbles moving downwards in their glass after their pint is poured. Now help is at hand for all of those pub philosophers who have debated why that might be the case when conventional wisdom suggests bubbles should float upwards instead. Researchers at Edinburgh and Stanford produced video footage for St Patrick's Day which settles the matter and provides black and white evidence that the bubbles are, in fact, dragged to the bottom of the glass.

It isn't just Guinness drinkers who have been baffled by the phenomena. *New Scientist* has already tackled the question in depth and, more recently, Australian researchers used the

latest industrial simulation methods to show that the bubbles – notoriously hard to track with the naked eye – would sink when a pint is poured. The Edinburgh/Stanford team is, however, the first to capture the tiny, elusive bubbles on film, having set up a high-speed digital camera with zoom lens in a chemistry laboratory. As well as settling countless pub debates, the video could help scientists better understand fluid dynamics – not just in industrial processes such as brewing, but also in a wide range of disciplines, including medicine and oceanography.

Alumnus Dr Andrew Alexander (above), from the University's School of Chemistry – who has worked with Professor Dick Zare at Stanford – said: "We had known for some time about the question of Guinness bubbles defying the norm. Our group carried out preliminary experiments at a local pub a few years ago, but the results proved inconclusive. We felt that

the waves of dark liquid that flow downwards only gave the illusion that the bubbles were going down, but the bubbles were just too small and too fast to see clearly. By the time that you started to form the impression that they were going down, the pint had settled. But now we have produced video proof that the bubbles do actually go down the inside of the glass."

Dr Alexander also pointed out that the major aim of the study was to engage the wider public in understanding science, and no public money was used for it: "The camera was borrowed, filmed in my 'spare' time (not that I have any), and the Guinness I paid for myself – I still have the receipts! However, the films will also be used to develop mathematical models of flow, which will have benefits for other branches of science."

To find out more and to see the bubbles in action, visit

www.chem.ed.ac.uk/guinness/

Andrew scoops poetry prize

Alumnus Andrew (A.B.) Jackson has been awarded the £5,000 Felix Dennis Prize for his book *Fire Stations*, the best first collection in the Forward Poetry Prize 2003.

Many of the poems in the collection draw inspiration from paintings, including Gauguin's *The Yellow Christ* and Francis Bacon's *Crucifixion*. Jackson was singled out by critic John Greening in *Poetry Review* for his 'demanding and ambitious work: direct, sharp in manner, with an intellectual edge, a valedictory quality.' His solo debut builds on these elements, uniting a clipped, precise style with a mercurial range of subject matter: the ambiguities of religious symbolism, personal heartbreak, David Hume, R.D. Laing, Schopenhauer and Scottish band The Blue Nile.

Born in 1965, Jackson began drawing before he could walk, and this remained his chief interest until the age of 15, when he switched his focus to language. "I needed to find a way into myself which art wasn't providing at that time, so I abandoned one form for the other," he says. His other interest – music – has been a constant factor throughout his life, which he

describes as his "primary source of inspiration and comfort."

Jackson studied English Literature at the University of Edinburgh, where he began writing seriously. In his second year, he met the poet Roddy Lumsden. Together they founded a student poetry magazine called *Fox*, which ran for four issues. As well as featuring student poets, they succeeded in gathering contributions from established writers such as Liz Lochhead, Edwin Morgan, Ron Butlin, and Brian McCabe. His interest in poetry continued to flourish, and in his final year he was Vice-President of the Poetry Society, with Lumsden serving as President.

After graduating, Jackson and Lumsden shared a flat for a couple of years, and it was during this time that they committed themselves to writing seriously, tutoring each other as they went along. Jackson says: "I think those two years pretty much made us the writers we are today."

On leaving university, he pursued several interests including drawing political cartoons and playing the flute with the band Sam Harlet. Jackson now works as an IT librarian at the Glasgow College of Building and Printing.

He has been published in a number of poetry anthologies including *The Message: crossing the tracks between poetry and pop*; *Anvil New Poets 3*; *When the Words Won't Come*; and *The Forward Book of Poetry 2004*. His poem *Saturday Night* received a commendation in the National Poetry Competition, 1999.

He admires a number of contemporary poets, saying: "Dorothy Molloy's first volume, *Hare Soup*, is astounding; Ian Duhig's *The Lammas Hireling* is the best book of poems I've read in more than a decade, and the American poet August Kleinzahler is producing some great, quirky work."

BROADCASTER AND JOURNALIST IAIN MACWHIRTER GIVES HIS OWN TAKE ON HANS BLIX'S RECENT VISIT TO THE UNIVERSITY AND THE CONFLICT IN IRAQ.

10

Can Hans Blix save the planet?

THE FORMER UN WEAPONS INSPECTOR, HANS BLIX, MAKES AN UNLIKELY SUPERSTAR. HE IS A MILD-MANNERED SEVENTY-SOMETHING SWEDISH CAREER DIPLOMAT WHO ESCHEWS ORATORY AND TALKS LIKE AN AMIABLE HEADMASTER. BUT WHEN I ARRIVED FOR HIS ADDRESS AT THE MCEWAN HALL IN FEBRUARY, THE QUEUE STRETCHED ROUND THE BLOCK. A LARGE PROPORTION OF THOSE WHO TURNED UP TO HEAR HIS THOUGHTS ON THE FATE OF THE PLANET SEEMED TO BE YOUNG. PERHAPS OBJECTIVITY IS BECOMING FASHIONABLE.

PHOTOGRAPHY BY DOUGLAS ROBERTSON

Of course, Blix's celebrity status – there is even a website in his honour (“Hans Blix SuperInspector”) – dates from his appearances before the United Nations Security Council in the weeks and months leading up to the Iraq war.

His assessment then was that Saddam Hussein had embarked upon meaningful disarmament and should be given time to continue down this road. But of course the “coalition of the willing” rejected his advice. There wasn't a moment to lose, according to Britain and America.

The infamous British September 2002 dossier on Iraq's weapons of mass destruction claimed British interests were on forty-five minutes notice of devastating attack. Tony Blair told the House of Commons that Saddam possessed lethal quantities of botulinum toxin, mustard gas and VX nerve agent. The idea that these had all been destroyed by Iraq was, Mr Blair told MPs “simply absurd”.

Well, absurd or not, it was the case. It is now pretty well established that there were no weapons of mass destruction in Iraq worthy of the name. We went to war on a false pretext. Iraq was a war that should never have taken place. If Tony Blair had listened to Hans Blix, he might have avoided Britain's worst foreign policy disaster since Suez. Ten thousand Iraqi civilians and soldiers would still be alive as would five hundred American servicemen. How could the British and Americans have made such an astonishing blunder? This is something that deeply worries Hans Blix. Together, the US and UK spend billions on intelligence

and have the most sophisticated surveillance apparatus in the history of humanity. Satellites which can read car number plates from eight miles up. How did they manage to see an entire arsenal that wasn't there?

Blix concedes that there were unaccounted-for items in the original WMD inventory of Iraq's weaponry dating from the 1990s. He could not prove that all the items had been destroyed. That was what his inspection team were trying to find out. However, the British and Americans argued that since there was no proof that all of them had been destroyed, then they must surely exist. Or at any rate, there was no point in taking the risk that they didn't.

At the very least, this was a war based on faulty reasoning – on a failure to think the matter through rationally. Hence the argument that because Saddam had not proved that he had destroyed his weapons, they must still be there. It wasn't simply that America and Britain had already made up their minds to invade Iraq, and weren't going to let the facts get in the way of a bad story – though it would be naive not to see that as also being true. But at root Iraq was a war based on intellectual failure or intellectual dishonesty.

It's a question of how leaders think. In my experience, politicians increasingly inhabit a world in which fact is contingent and truth relative. They have learned from journalists how to bend truth to make it fit whatever story they want to tell.

Politicians may also, perhaps unconsciously, have been influenced by the view prevalent in many university departments, that objective truth is simply impossible; that facts are only facts in context. The very fact that there is a neutral observable reality is regarded as either naive or ideological by structuralists.

Now, I'm not suggesting that politicians spend their time reading Derrida or Lacan. However, they cannot help but be influenced by the intellectual fashions of the times. And if there is no place any longer in politics for scientific objective, then we indeed live in a dangerous world. If politicians will not listen to reason then Iraq may set a precedent for future conflicts.

As for Hans Blix, he has moved on from Iraq. He told the McEwan Hall that he believes global warming, rather than terrorism, is the next threat to international order. Climate change will cause peoples in disadvantaged nations to seek redress against the polluting powers. The loss of territory, population and wealth will place immense strain on international institutions and could lead to another arms race.

But the paramount issue here is getting the United States even to recognise that there is a problem, let alone that America is one of the prime causes of it. It is extremely difficult to prove that global warming is caused by the CO2 emissions of industrialised nations. It is always possible to argue that global warming is merely part of natural fluctuations in climate temperature. Science doesn't deal in certainties, but in probabilities based on the accumulation of evidence.

Even as the waters rise around them, the oilmen who run the Republican White House will no doubt be arguing that fossil fuels had nothing to do with it, just as they argue that Saddam had WMD and non-existent links with al-Qaeda. More than ever we need a new cast of public intellectuals, ambassadors of reason, dedicated to the rational appraisal of evidence and able to give hot-headed politicians some grounding in reality. The question is: can Hans Blix save the planet?

■ Science doesn't deal in certainties, but in probabilities based on the accumulation of evidence ■

14

His fellow students recalled his elegant manners, perfect English and dry sense of humour; he remembered the kindness of his landlady, penny breakfasts of milk and porridge and the distant Pentland Hills. Dressed in his flowing robes, he was the centre of attention at lunches and gatherings, but happier in his laboratory pursuing his studies in chemistry. One of the University's many distinguished overseas graduates, Prafulla Chandra Ray was among the first Indian students to be awarded a Doctorate in Science in 1887.

An Indian Chemist in Victorian Edinburgh

By Ian Wotherspoon

Although he was a brilliant scientist, his interests were not confined to the academic world. Rather than use expensive imports, he pioneered the manufacture of Western medicinal drugs in India and advised on the development of other industries, including the production of porcelain and enamel. More importantly, whilst a student in Edinburgh, he embraced the Indian nationalist movement, launching himself on a crusade which absorbed much of his time and energy in the tumultuous years before the end of British rule in 1947.

In coming to study in Edinburgh, Prafulla Chandra followed a path well trodden by students from "furth o' Scotland." Traditionally, the University had been international in outlook, welcoming students from elsewhere in Britain, Europe and America. The growth of British influence in the nineteenth century deepened that focus. Indeed, by 1914, nearly a quarter of Edinburgh's undergraduates came from abroad, not just from India and other parts of the British Empire, but from locations as diverse as Beijing, Izmir and Seattle.

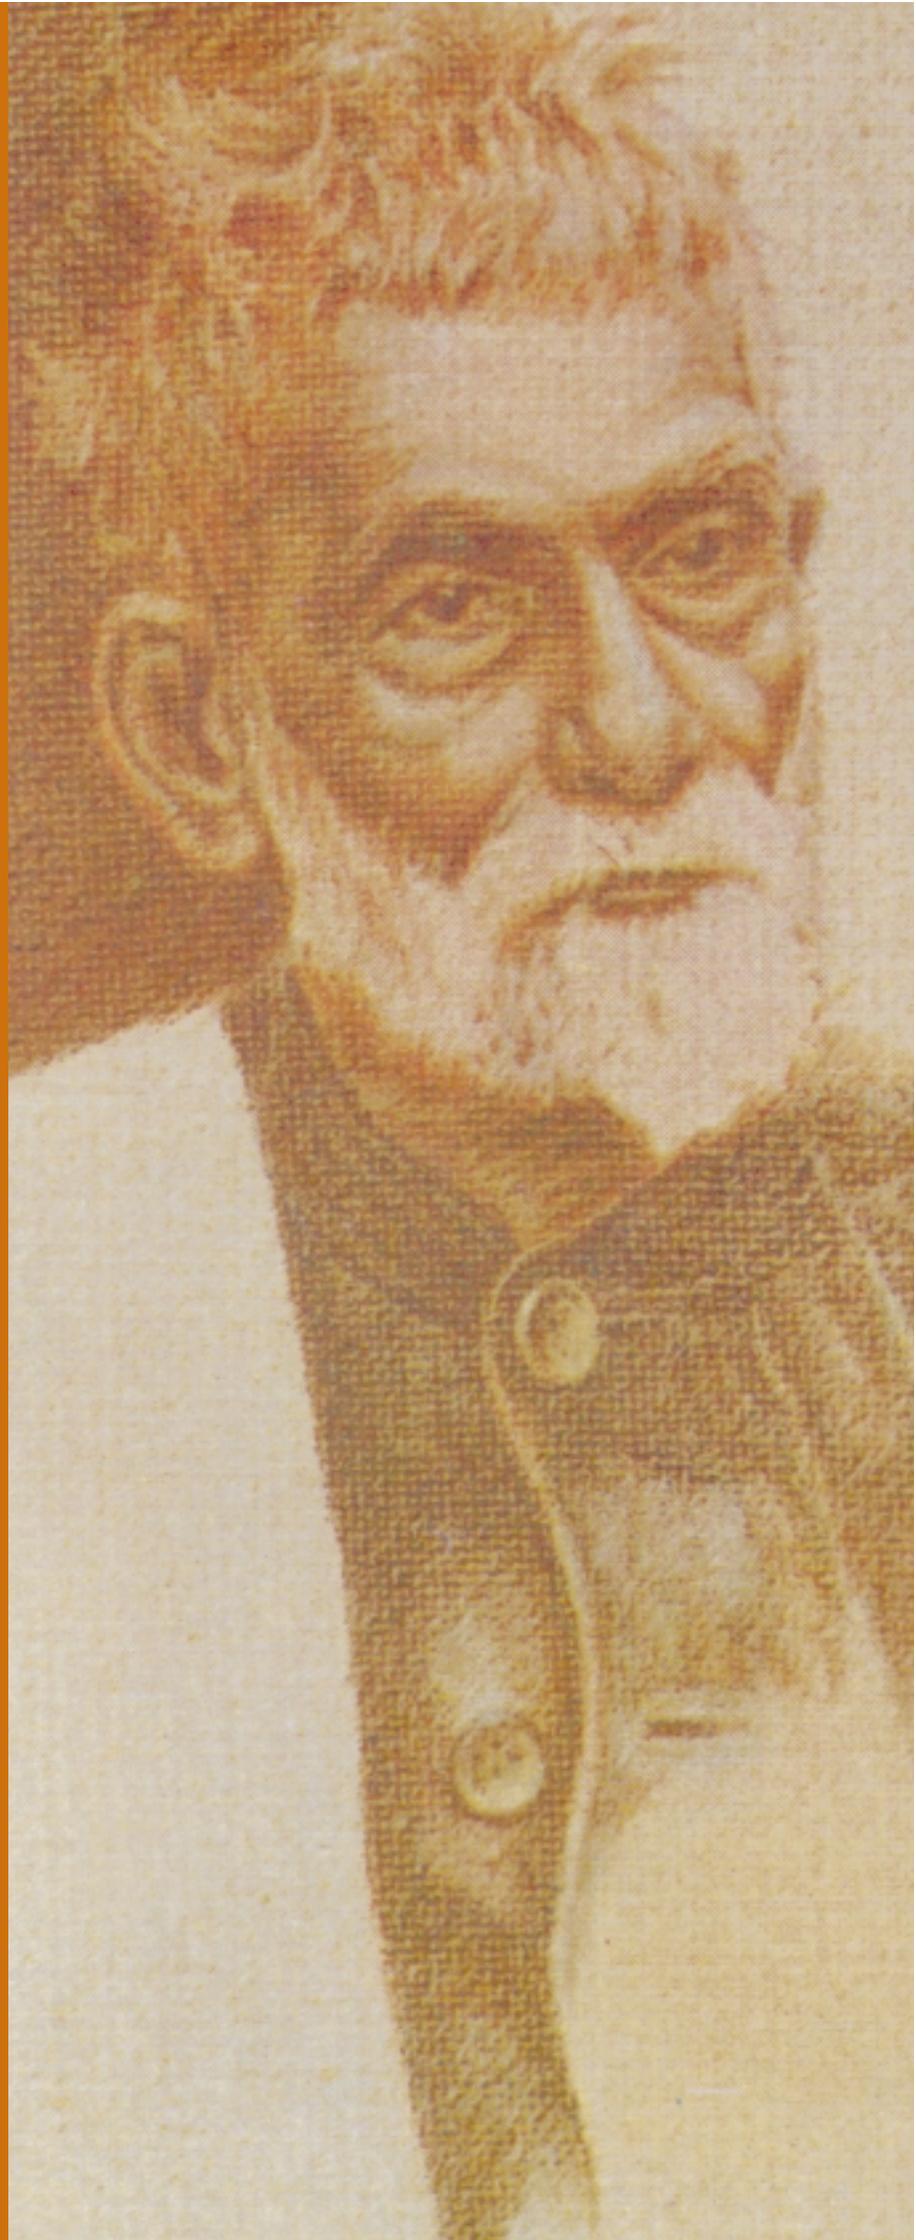

It was an exciting time to be a student in Auld Reekie. The framework of the University was being overhauled to provide an academic culture which better met the needs of a new imperial age. Curricular changes, including the creation of new Chairs in disciplines such as engineering, geology and education, enhanced this process. There was lively debate on whether women could, or should, study medicine and how best to promote scientific education. The atmosphere may have been eclectic but the academic emphasis remained solidly on nurturing the abilities of students – from wherever they came.

Prafulla Chandra took an active part in the academic and social life of the University. Bemused by the boisterous antics of younger undergraduates, he learnt classroom management techniques, as well as chemistry, from Crum Brown, his revered, if somewhat eccentric, professor. We do not know if he joined the Edinburgh Indian Association but he was elected Vice-President of the University Chemical Society in 1887. By then, not only were his academic attainments widely recognised but he was also seen as a persuasive, if possibly dangerous, advocate of Indian nationalism.

Although Prafulla Chandra came from a generation of English-speaking Indian students familiar with Western thinking and values, whom it was hoped might bolster British rule in India, he was no stooge of the Raj. The University's rector of the day offered a prize for an essay on India before and after the Mutiny. Prafulla Chandra's forthright critique of the legitimacy of Britain's presence and achievements on the subcontinent won him second prize.

"India is a country of famished peasants," he wrote, "governed by an alien nation mainly for the benefit of itself." He suggested Indians faced unreasonably high taxation which returned few economic benefits or social services. A massive investment in scientific and technical education was needed, he argued, to allow Indians a larger share in their own future and to develop an industrial base which met Indian, rather than British, needs.

He paid a high price for his views. Despite a glowing reference from the then Principal, William Muir, and the support of the radical MP, John Bright, doors quietly closed to possible opportunities in the Government of India's Education Service.

“ His students remembered him as a rigorous scholar whose self-effacing kindness extended to donating his salary to the department in which he taught. ”

An Indian Chemist in Victorian Edinburgh

In retrospect, perhaps, he was fortunate. His appointment as an Assistant Professor of Chemistry at the Presidency College in Calcutta allowed him both to showcase his considerable academic prowess and develop his thinking on a diverse range of economic and social issues, which he expounded to an enthralled audience of young Indians, many of whom were to play an active role in national life before, and after, 1947. Although he led a very public existence, whether campaigning against racism or supporting Mahatma Gandhi, his lifestyle was simple. His students remembered him as a rigorous scholar whose self-effacing kindness extended to donating his salary to the department in which he taught.

His reputation as a leading international scientist was well established when he was appointed Professor of Chemistry at the University of Calcutta's Science College at Rajabazar in 1916, a post he held for 20 years. His research on mercurous nitrite had brought him wide acclaim in 1886, and again in 1912, when he presented his findings to the Chemical Society in London. His seminal work, *The History of Hindu Chemistry*, the first volume of which was published in 1902, confirmed his position as a scholar of outstanding ability.

Whether by chance or design, his associations with the University remained strong throughout his life.

He came to Edinburgh in 1882 having won a competitive scholarship funded by another Edinburgh graduate, the irascible oriental scholar, John Borthwick Gilchrist. As a struggling young lecturer recently returned to Calcutta, it was a future Principal of Edinburgh University, the eminent geologist, Thomas Holland, who supplied him with mineral specimens for his new laboratory. Coming back to Edinburgh in 1904, he was feted at a meeting in the Caledonian Hotel, chaired by his old teacher, Crum Brown.

Towards the end of his life, Prafulla Chandra looked back with wistful affection on his time in Edinburgh with its bracing winds, rumbling tram cars and gas streetlights glimmering through the haar.

It was here he came to realise that India was “lagging behind” and would never prosper within the framework of British rule. His debt to his alma mater was considerable. The University of Edinburgh helped shape the life, and thinking, of this remarkable man and, in some measure, the destiny of the India he loved, and served, so well.

A graduate in Scottish Historical Studies, Ian Wotherspoon has spent much of his life in Asia and the Pacific where he worked in change management and finance. He is now a volunteer manager with Barnardo's Scotland in Edinburgh. His interests include the University's past and present connections and influence abroad.

Complete picture

I am compelled to respond to Lucy Lloyd's letter in your winter 2004 edition. My husband and I are also honours graduates of Edinburgh and I am also a science teacher (chemistry). Our children have been well educated within the state system by our own choice; we opted not to send them to independent school as we feel they do not get a true picture of the wider world.

I fully subscribe to the idea that it is sensible and fair to look at a more complete picture when selecting students. Surely Mrs Lloyd of all people should realise the severe disadvantages suffered by young people who do not have supportive parents! I teach some incredible youngsters, some very privileged, others who are carers (of ill parents or siblings) or are neglected and who cannot always produce the same quality of work because of their circumstances.

I do find it rather hypocritical that she is a teacher in the state system but chooses to send her own children to an independent school. Does she consider that she is providing a second-rate service to the students she teaches? I would have thought that the revised policy does ensure that "Edinburgh welcomes applications from all students whatever their background". What she infers is paying more money should guarantee your children entry to top universities.

Marjorie Lally, by email

Politicised spookery

I regret that Professor Jeffrey-Jones (*Edit* volume 4, issue 1) did not note how intelligence and government together have created a very powerful self-serving self-exciting system. Provided with threats that 'cannot be named for security reasons', the government applies the 'Precautionary Principle' – 'When an activity raises threats of harm to the environment or human health, precautionary measures should be taken even if some cause and effect relationships are not fully established scientifically'. Together, government and intelligence can induce, in all of us a state of perpetual 'organised paranoia' and so ensure our willing compliance to its edicts, however oppressive.

Professor Fenton F Robb, by email

Plea for simplification

I received the new issue of *Edit* this morning. It is colourful and striking, but unfortunately I have to offer the following criticism:

- some of the typefaces are much too small for elderly eyes
- even larger typefaces are difficult to read when printed in pale colours against white.

May I enter a plea for simplification – adequate typefaces, printed in black against a white background. They might not look so artistic but they would, I think, be more easily readable. These comments apart I enjoy this occasional contact with my Alma Mater.

John Gibb, (MB ChB 1944)

Editors note: Points well made. We will keep striving to get the balance right between visual interest and legibility. We have created a text-only version of *Edit* available for downloading from our website at www.cpa.ed.ac.uk/edit/ or by contacting us at the address above.

Raising aspirations

By **Dr Neil Speirs** Widening Participation Project Officer

Imagine if you didn't know what a university was. Living in a city that has six higher education institutions, one would imagine that nobody in Edinburgh would ever *not* know what a University is. Unfortunately the opposite is true: there are parts of our local community that simply have no experience or contact at all with any form of higher education. To help challenge this, the Widening Participation project, based in the Recruitment and Admissions Liaison Service (RALS), was awarded a Small Project Grant by the University of Edinburgh Development Trust.

Research shows that if pupils have positive contact at an early age with higher education and all that it entails, the impression stays with them as they mature. Current outreach projects often only make first contact with these pupils in S2, by which time the unfortunate cynicism of adolescence has set in. It is very difficult to convince those in low-participation neighbourhoods that higher education is open to them if they want it and not simply for those that live in other parts of town.

The University's RALS Pilot Primary School Initiative got underway last autumn, to spread the word about

university and higher education in a selection of primary schools that feed into Wester Hailes Education Centre and Liberton High School – historically low-participation areas.

The main aim of the programme is not recruitment but simply to raise aspirations. The first stage is a school-based workshop involving Primary 6 pupils, some undergraduate students and a member of the Widening Participation team. The pupils find out what a university is, the names of the universities in Edinburgh and where they are, what happens there, what students wear, what a lecture theatre is and other such important basics that opens the door to what they all deserve: an equal chance.

The workshops then translate into a day visit to the University of Edinburgh. The pupils are taken to a lecture theatre and are finally convinced that they can accommodate up to 500 people – all at once! After lunch, workshops are provided in conjunction with some of our academic Schools. This year the pupils and teachers were involved in workshops in Chemistry, Engineering, Biology, Classics, Japanese and Music.

While the pupils enjoy the workshops, the staff are keen to challenge them academically so they are not patronised, an aspect that the pupils appreciate.

The next stage involves an informal parents', pupils' and teachers' evening at the participating primary schools, where parental aspirations for their youngsters are also raised. This allows for questions to be answered, higher education to be demystified and the pupils to talk about their experiences.

By the end of the programme, the pupils have been on quite a journey. Imagine, while speaking with one of the workshop classes, one pupil pulling at my shirt. She informed me, very quietly, that university sounded wonderful but it was a shame she wouldn't be able to go, as that's where other kids went. She has since been convinced to the contrary merely through involvement with the initiative, and wants to go straight from primary school to university. She has been convinced to go to secondary school first, where in first year we'll all meet up again in the next stage of this particular Widening Participation initiative.

The three stages of the Widening Participation Project

PHASE 1

Primary School Initiative

Primary 6 & 7 (age 10 & 11)

The primary school initiative introduces higher education to the pupils and allows familiarity to develop. Aspirations in turn are raised.

PHASE 2

Gifted and Talented Summer Community Education Programme

S1 & S2 (age 12 & 13)

The community education programme brings together gifted and talented pupils that are showing academic potential. They find themselves in a positive learning environment and aspirations continue to grow.

PHASE 3

Current Widening Participation

Initiatives supporting 46 state schools in Edinburgh and the Lothians S2-S6 (age 13-17). Current outreach initiatives continue to encourage, inspire and advise students on their journey into higher education.

Feedback from participants

The Widening Participation team encourage feedback from both the pupils and the teachers who visit.

“What an excited group of staff and children I met when they returned to school after their visit to the University: ‘I can count to 100 in Japanese’, ‘The Romans were dead cool’ and ‘I got to play a musical instrument’. Clearly it all went well! Thank you.”

Illustration by Nicole Gray

Talbot Rice

gallery

Talbot Rice Gallery, established in 1975, is named after David Talbot Rice, Watson Gordon Professor of Fine Art at the University from 1934-1972.

The Gallery shows exhibitions of work by Scottish and international artists, promoting knowledge, understanding and new ideas, through thematic exhibitions, events and publications.

The University Of Edinburgh, Old College, South Bridge, Edinburgh EH8 9YL

Tel: 0131 650 2211, **Email:** info.talbotrice@ed.ac.uk

www.trg.ed.ac.uk

Open: Tues – Sat, 10am-5pm

Admission Free

There is a lift with wheelchair access to both floors of the White Gallery.

THE GEORGIAN GALLERY

Permanent Collection

The Talbot Rice Gallery houses the University's permanent collection in the Georgian Gallery. The Torrie Collection consists of Old Master bronzes and paintings collected in the late 18th and early 19th centuries by Sir James Erskine of Torrie.

Admission Free

Temporary Exhibitions

Talbot Rice presents up to five major exhibitions per year. Recent major shows include Steven Campbell, Kenny Hunter and Janice McNab. Object Lessons, a historical exhibition from the University's collections is now available on line in the Georgian Gallery www.objectlessons.lib.ed.ac.uk. This programme is accompanied by projects in the round room.

Friends of the Talbot Rice Gallery

The Friends give active and practical support to the Gallery and offer a programme of events alongside the exhibition education programme. Contact the gallery for membership information.

Modern Scottish Art from the University of Edinburgh collection 24 April – 29 May

An exhibition charting acquisitions made to the Gallery and the University in recent decades.

Artists Eduardo Paolozzi and John Bellany, who have exhibited at the Gallery, have made important gifts. There have also been significant gifts from organisations such as the Scottish Arts Council and the Hope Scott Bequest which includes a large group of works by William Johnstone.

Health Month: Three exhibitions that focus on aspects of health and art 10 June – 10 July

Main Gallery: Art Works in Mental Health – A national exhibition funded by Pfizer providing an insight into personal perceptions of mental illness showing two- and three-dimensional work together with creative writing.

Upper Gallery: Artesian Arts – Work selected by the Scottish artist-led charity that exists to promote and provide a forum for outsider and raw arts.

round room: Karen Ingham

A photographic installation, the result of collaboration between Ingham and the Royal College of Surgeons at the University of Edinburgh.

Cyclorama: Edinburgh International Festival Exhibition 31 July – 25 September

A vast panorama reinvented as the Cyclorama, created by New York-based painter, Sandy Wurmfeld.

A cylinder ten metres in diameter will be constructed in the Gallery and will feature an all-round abstract colour field rainbow.

Complemented by a historical exhibition exploring the origins of the panorama, the upper Gallery will show Edinburgh-born artist, Robert Barker's panorama of Calton Hill from the University's collection.

Leonard McComb 16 October – 4 December 2004

A major exhibition of work by Leonard McComb RA, his first in Scotland since 1983. The exhibition will have a retrospective element showing work of the last two decades, but focusing on work produced in 2003 and 2004. The works will be in the themes of architecture, portraits and botanical studies and centre on the artist's drawings.

round room: Naomi Campbell

A selection of photography, collage and drawing that seeks out romantic elements from everyday actions and surroundings.

Fourth rock from the sun

Dr Vicky Hipkin is a postdoctoral researcher at the University of Toronto. She graduated MSc from the University of Edinburgh in 1995.

Subject Physics (BSc); Remote Sensing and Image Processing (MSc)

Graduation year 1994; 1995

What have you done since you left the University?

As an atmospheric physicist now specialising in planetary atmospheres, I am currently Canadian project scientist for the NASA Phoenix Mars mission to be launched in 2007, and have been a co-investigator on proposals for new missions to study Mars' atmospheric composition. The Phoenix mission will land near the Mars north polar cap and carries a Canadian lidar and weather station.

My initial training and research was not in the planetary field: as well as an MSc in Remote Sensing from Edinburgh, I have a PhD in Antarctic atmospheric boundary layer studies from the University of Leeds, and followed that with a year's post-doctoral studies in New Zealand. I moved to Canada four years ago in response to a post-doctoral opportunity at the University of Toronto to study Mars atmospheric mission concepts.

What were your expectations of starting university, and did the experience match up?

My expectations were to meet a lot of interesting people, try new activities and be challenged academically. The experience certainly matched up!

What is your best memory of the University and the city?

My best memories must be of some very good friends I met at that time: by chance two of them are currently also in Toronto.

How have they changed since you studied here?

Both the city and University have changed significantly. Since I studied in Edinburgh, the new Scottish Parliament has been created and with it much new development. Information technology has certainly changed the University. As undergraduate physicists we had access to a text-based internet browser and thought that pretty exciting! On a personal note, there is the loss of James Thin Booksellers as a family firm. It was an Edinburgh institution where many Edinburgh students (myself included) used to work evening shifts.

Most embarrassing moment of your University career?

Thankfully, I don't remember.

In what way do you feel connected with the University?

Above my desk at the University of Toronto I have a University of Edinburgh poster showing a photograph of the city. I believe efforts are underway to establish an exchange option for Edinburgh University geophysics students with physics and geology at the University of Toronto.

What advantages has an Edinburgh degree given you?

The BSc and MSc degrees have provided a very solid experimental and theoretical basis for my research. I enjoyed the final year undergraduate research projects immensely, and have made good use of the excellent research tools and skills introduced in the MSc.

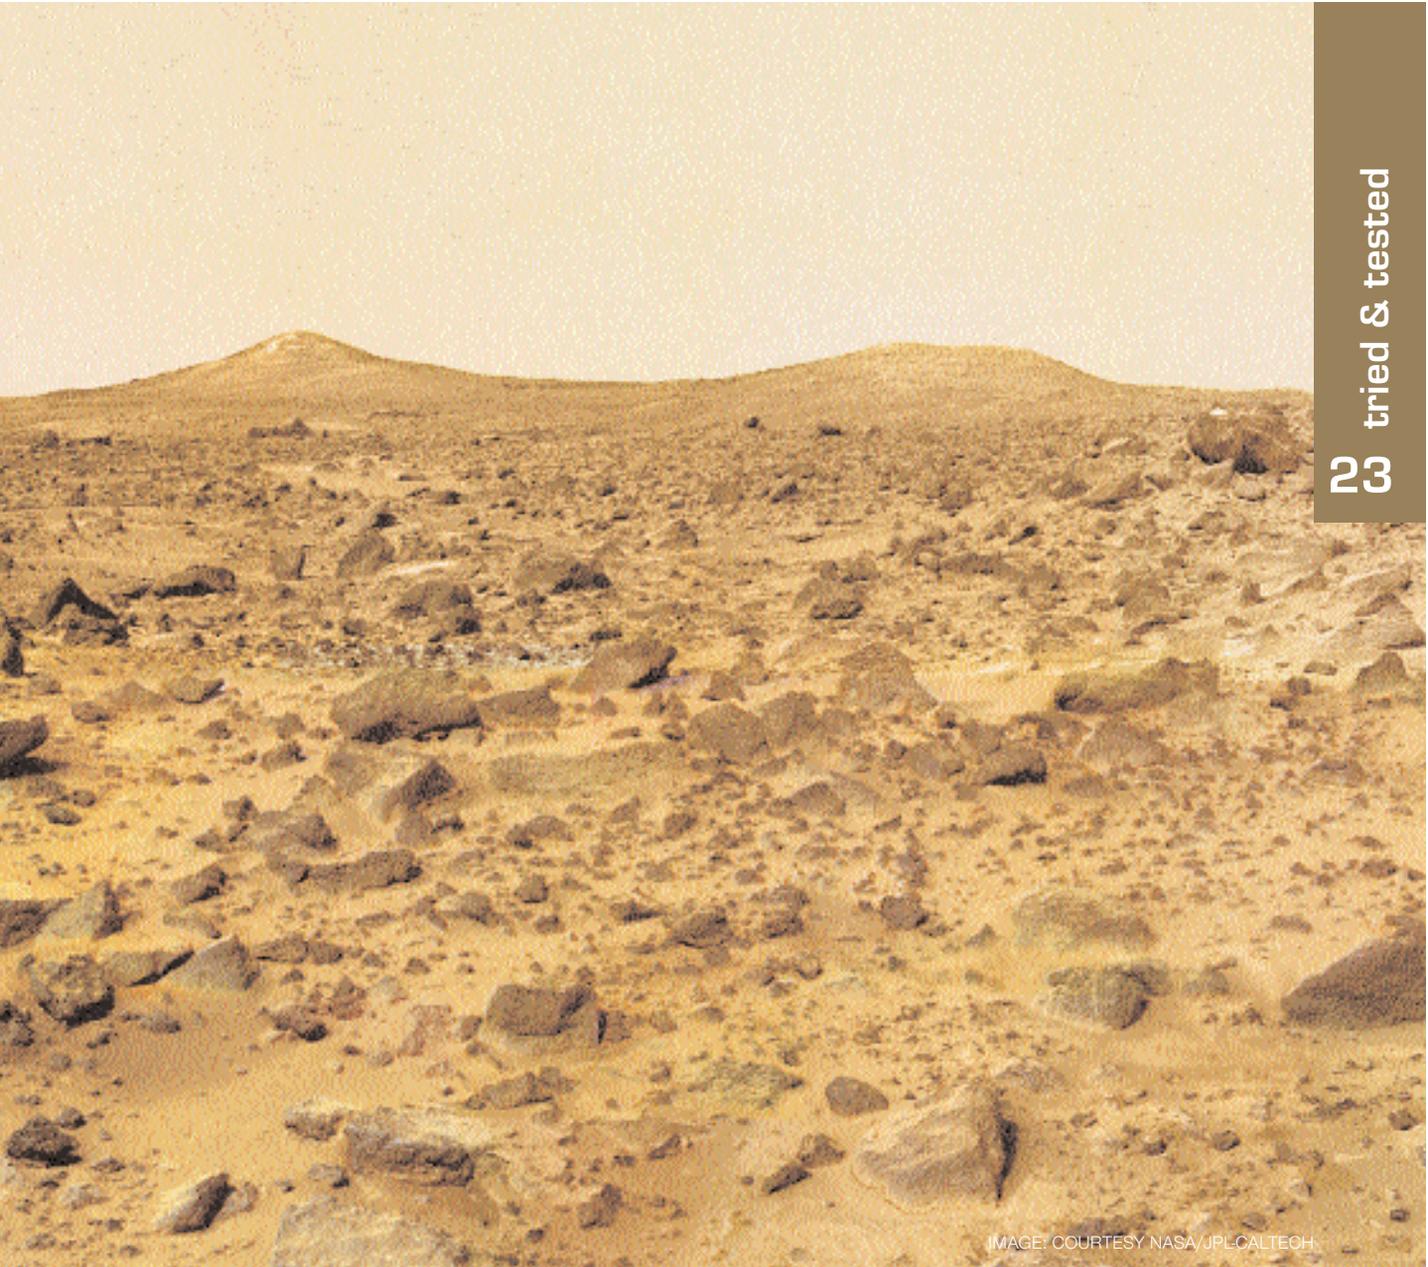

IMAGE: COURTESY NASA/JPL/CALTECH

Does a degree mean as much now as it did when you graduated?

Difficult to compare. There are certainly more graduates now than previously; however, the entire economy and expectation of career has changed. Current degree programmes offer greater opportunities to participate in international exchange programmes and more flexibility in course selection.

How does HE policy now differ from when you studied and what are the implications?

While HE policy has certainly increased student numbers dramatically, this isn't reflected positively in all areas: at present we are having surprising difficulty recruiting post-graduate and post-doctorate experimental physicists for Mars mission and other satellite developments.

What has life taught you?

To respond to opportunities. To take weekends off.

What does the future hold for the University and for your subject area in the next 10 years?

I imagine Edinburgh University will continue as a top-ranking UK university and wish it every success.

The next 10 years in Mars research will be unusually significant due to the heavy concentration of mission activities both current and planned. As well as NASA 4

and the European Space Agency, smaller countries are getting involved directly: the UK has recently sent Beagle II, and the Canadian Space Agency has a nascent Mars program of its own. This intensive mission activity means an enormous amount of new data is becoming available, paving the way for exciting new discoveries. Last month methane was detected for the first time in the Mars atmosphere. Future missions will follow this up to determine whether its source is microbial or volcanic. Recent discoveries of bacteria in extreme environments on Earth have increased expectations that life may in fact survive the Mars environment. Kresge Challenge Brings Vision Even Closer

It is an indisputable fact that Edinburgh Medical School's hall of fame features many individuals who have contributed significantly to the shape of modern medicine as we know it today. Liston, Simpson and Syme are just three examples. However, resting on the laurels of its distinguished past is not an option for the University.

Edinburgh's tradition for nurturing talent, the backbone of the pioneering work which is its hallmark, continues.

Central to this is an ambitious vision – where the disciplines of teaching, practice and research are brought together on one bespoke site sharing some of the most advanced facilities in Europe.

The focal point for this vision is Little France (above) on the perimeter of the city. It already houses Edinburgh's newest hospital and the Chancellor's Building – a state-of-the-art academic centre for clinical teaching and the latest addition to Edinburgh's prestigious Medical School.

Work continues and the next stage of development for the Medical School is a new research centre (the Research Institute for Medical Cell Biology) – the last piece in the jigsaw. The result will be the creation of the perfect environment for the innovative work of the Medical School.

The benefits are obvious. The proximity of the three buildings and their shared facilities allow hospital and University staff to work seamlessly together. The location of the research institute will allow 'from the bench to the bedside'

development of new methods of treatment for the major diseases which affect people in Scotland today. Over 600 scientists will be able to work collaboratively to gain a greater understanding of some of the most debilitating diseases such as cancer, heart disease and lung-related disorders such as asthma. And the high-tech facilities will be on a par with those in the US and Japan.

Raising the funding for the £49 million centre has been a major challenge for the University. Over £46 million has been raised towards the target thanks to the generosity of organisations, trusts, individuals and graduates.

Now the last leg of the fundraising effort is in sight. A major boost, in the form of a challenge award from the Kresge Foundation (a first for a Scottish higher education establishment), has made the target even more enticingly close. The Foundation has laid down the gauntlet to the University's fundraisers with the prospect of a US \$1 million award, to be released on condition that the

remainder of the funds, some £3 million, is generated within 18 months.

A £300,000 donation from the Gannochy Trust for a new imaging suite at the Little France complex is a significant step forward in achieving this.

However, the closer the target, traditionally the more arduous the fundraising drive. The prospect of the Kresge award has added new urgency to the campaign and it is now crucial that the appeal goes wider. The significance of every donation, no matter what size, is greater than ever at this stage in the campaign, with participation levels the key to success. So far alumni and staff are answering the call.

Building of the new institute is in progress. However, with the target completion date of spring 2005 looming, fundraisers know that the generosity of individual donors, at this point, will be instrumental in making sure that the vision for the Medical School is achieved.

Clubs and Reunions

The number of University of Edinburgh alumni clubs and groups keeps on growing, year after year. We currently have a total of 69 international clubs and contacts, breaking down into eight UK-based geographic clubs, 50 overseas-based clubs/contacts and 11 special interest clubs. Many of our clubs organise a regular programme of events, all of which are listed in the Events section of our website: www.dev.ed.ac.uk/events_reunions.htm

We have recently been working to establish several new clubs and alumni groups – involving alumni in Argentina, Cyprus, Edinburgh University Alumni Golf Club, to name but a few. A full listing of our clubs/contacts can be found at: www.dev.ed.ac.uk/clubs_organisations.htm

If there is no group listed in your geographical area, why not consider becoming an alumni contact yourself? Simply get in touch with Development & Alumni to find out what is involved.

The European Constitution: explained!

Professor Sir Neil MacCormick

If anyone is in the position to shed light on the political and legal complexities of European treaty texts from Brussels, Sir Neil MacCormick, Member of the European Parliament and distinguished former Edinburgh professor is that person.

Sir Neil agreed to join EUBS (Edinburgh University Brussels Society) members and friends for an informal evening debate on the new EU constitution, kindly hosted by law firm White & Case in the heart of Brussels.

And for Sir Neil the constitution comes not a moment too soon.

"I don't think it is satisfactory to bump along with the treaties. It is better to have the constitution," he told EUBS. "And anyone can have a look at it – it is on the web."

It was a terrific, lively debate and whilst EUBS brave souls threw challenging questions at Sir Neil on the groundbreaking document, he responded with clarity, vivacity and a liberal smattering of wit, often charged as being missing from the text itself!

Edinburgh University Rugby Club

Three seasons ago Edinburgh University Rugby Club was anticipating a hard year battling in National Division Three, yet three years later the club is eagerly anticipating playing in Premiership Three next season. After three promotions in three years, and with all four of our teams winning their respective Scottish University Championships this year, the Rugby Club is going from strength to strength. Through these achievements, The University of Edinburgh is showing that it is once again a serious force in Scottish Rugby. We are looking forward to our tour of South Africa this summer, which will round off what has been a long hard season, but it will also allow us to build towards what is going to be a very challenging, yet immensely exciting, 2004/05 season.

There is no better time to further our efforts off the field, in order to

complement our successes on the field. We are hoping to re-establish contact with as many former members, supporters and alumni as possible, who are interested in hearing about the progress of the University rugby team. Our aim is not only to increase contact between former members of the club and the current players, but also to organise events that allow old friends to catch up and re-live the highs and lows that they themselves experienced whilst competing for the University.

If you are interested in re-establishing contact with Edinburgh University Rugby Club, or just receiving our newsletters, please tick the box on the 'Information Please' form on page 34 or write to: Patrons' Secretary, Edinburgh University Sports Union, 48 Pleasance, Edinburgh, EH8 9TJ. Alternatively you can email Chris_robson100@hotmail.com

Alumni in Boston

University of Edinburgh alumni in Boston, Massachusetts celebrated a belated Burns Supper on 1 March.

Approximately 85 alumni (and friends) honoured the Bard in a festive evening complete with bagpipes, Highland dancing, Scotch and haggis. Drawn by the rare sound of Scottish accents and

bagpipes in Boston, guests gathered for drinks before being led in a Procession of the Haggis and the Chefs. The chefs successfully prepared their first ever haggis which was appropriately addressed and toasted before being divided up for all to try, or avoid, as a few squeamish folks did.

While the toasts were all memorable, several stood out for their humour. The Honourable John Rankin, HM Consul General, Boston, had guests laughing with his "Immortal Memory", followed by the equally clever "Toast to the Lassies" and "Response of the Lassies", Dr. Barry Miller and Mrs Leela Damm, respectively.

The celebration included performances by local groups (Highland Dance Boston and the Royal Scottish Country Dance Society, Boston Branch, ably led by Edinburgh graduate Bruce Mabbott,) who got everyone onto the dance floor with the Gay Gordons, Strip the Willow and the Dashing White Sergeant among others. While there were quite a few people who displayed impressive grace and skill, it was clear that many guests had not been on a (Scottish) dance floor since their days in Teviot Hall. The evening ended without serious injury, to the beautiful sounds of Auld Lang Syne. Guests were grateful to Ralph and Jane Gillis who organized the event, and are already looking forward to next year's celebration.

Edinburgh University Club of London (EUCL)

JOINT ALUMNI DAY WITH THE GENERAL COUNCIL OF THE UNIVERSITY

Saturday 26 June 2004

The General Council will be meeting in London for the first time ever this June. EUCL are organising a programme of events for the afternoon and evening of 26 June, so that those attending the meeting at Birkbeck College, London Club members and any alumni in the London area can enjoy the remainder of the day together.

Afternoon Programme

Option 1: Flight on the London Eye

As well as being one of the most visually striking structures in the world, the London Eye offers a new perspective on a great city – 'The way the world sees London'. The capital's famous streets, churches, palaces and monuments spread out below in a panoramic scene grown up since Roman times – and on a clear day, views that stretch 25 miles to Windsor Castle. Tickets, at £20 per person, include the entrance ticket and a coach from Birkbeck to the London Eye.

Option 2: Visit to the Gilbert Collection

This is beautifully housed in newly restored Somerset House, one of the country's finest and largest 18th-century buildings and of international importance as architectural heritage. The Gilbert Collection of decorative arts is one of

the most important gifts ever to be made to the British nation. The collection comprises 800 works of art formed over the past 35 years by Sir Arthur Gilbert. Tickets, at £22 per person, include the entrance ticket, Blue Badge guide (private) and a coach from Birkbeck to Somerset House.

Evening Programme

In the evening Development & Alumni has arranged for Dr Tam Dalyell, Rector of The University of Edinburgh, to host a Reception and Dinner at the House of Commons from 7pm. Numbers for this part of the programme in this unique venue are limited, so it is strongly advised to book your tickets (£45 per person) early to avoid disappointment. The dress code will be lounge suit with tie for men.

To book for any of the above events, complete the booking form on the inside back cover.

Kingdoms of the Mind

Dr Bill Bell pictured with EDUCT member and Professor Emeritus of Media and Communications at Ryerson, Donald Gillies.

On 19 March, Dr Bill Bell, Director of the Centre for the History of the Book at the University of Edinburgh presented "Kingdoms of the Mind: The Nineteenth Century Scottish Book in Canada." The lunchtime event attracted more than 25 Edinburgh alumni and 'friends of the book' from three Toronto campuses.

In his illustrated talk, Dr Bell shared his insight on an important chapter in Canadian cultural history and the vital role that Scottish settlers have played in the development of Canada.

Dr Bell also lectures in English literature at the University of Edinburgh. He has been a visiting Fellow at the University of Ottawa, the Australian National University, and St. John's College, Oxford. He has published widely on

nineteenth century literature and culture, and is general editor of *The History of the Book in Scotland*, to be published in four volumes by the Edinburgh University Press.

Tour of Queen's University

EDUCT members and friends are invited to a special trip to Queen's University, Kingston, and the surrounding area on June 18 to 20, 2004.

Those wishing to participate please contact Liz McBeth at liz@mcbeth-media.com or 416.291.9400. The estimated cost is \$150-\$200 per couple or \$100-\$150 for singles. EDUCT will help coordinate travel and accommodation arrangements. Carpooling options will be available.

The Royal Bank of Scotland Group Alumnus of the Year Award

Since 1990, the University of Edinburgh has recognised the achievements of its graduates through its award of 'Alumnus of the Year'. The award is made annually to a former student for services to the community, achievements in arts or sciences, in business, public or academic life.

If there is an alumnus you feel is worthy of being recognised in this way, then please request a nomination form by completing the 'Information Please' coupon on page 34, or simply download the form from our website at

www.dev.ed.ac.uk/alumnus_year.htm

where you can also find out about previous winners. Nominations close on 30 June 2004.

The winner will receive this prestigious award at the winter graduation ceremony at McEwan Hall in December, and in the evening the Principal will host a private dinner party for the winner and their invited guests, including the individual who nominated them for the award.

World Service

 Update _____

UPDATE By Peter Freshwater, Convener of the Business Committee of the General Council

The General Council is the means by which graduates have a continuing voice in the management of the University's affairs, and every graduate automatically becomes a member. Academic staff and members of the University's supreme governing body, the University Court, are also members of the General Council, which meets twice a year and has the right to comment on matters affecting the University's prosperity and well-being. For more information on the work of the General Council, visit www.general-council.ed.ac.uk

Having restructured its entire academic, service and management, the University, and with it, the General Council, is poised to embrace the restructured academic year. From April 2004, it will run from August to July. It comprises two long semesters and a short term of consolidation and examinations so that, from 2004, the teaching year will begin on Monday 20 September, with the week before as Freshers' Week. Summer graduations in Humanities and Social Science and in Science and Engineering will be held towards the end of June; those in Medicine and Veterinary Medicine, as now, will be held in mid-July. Resit examinations will be held in mid to late August. Winter graduations will be split between December and January. Further information is available on the University's website.

Similarly, the General Council year will begin on 1 August. The September meeting of the Business Committee will thus be the first meeting of the newly-elected Committee instead of being the final meeting of the outgoing Committee. The Business Committee awaits the University Court's

decision on its pattern of meetings in the new academic year before reviewing its own. In the meantime, we welcome the recent appointment of the Council's Assessors to a number of the Court's standing committees.

We are all looking forward to the Half-Yearly Meeting in London in June. It has taken a lot of organisation, and we hope that we have got it right. In particular, I hope that it will enable many members of Council who live at considerable distances from Edinburgh, and who are not normally able to do so, to attend a Half-Yearly Meeting. I hope no less that at least some regular participants will also be able to attend, and to meet more of our fellow members in and from distant lands. I am tremendously grateful to Dr Ann Matheson, Secretary of Council, and Mrs Jean Gibson, Assistant to the Secretary, for all their efforts to make it a success, and to Sir Malcolm Rifkind, President of the University's Development Trust, for kindly agreeing to address us after lunch. We are all grateful, too, to Ms Rosalind Topping, Convener of the Edinburgh University Club of London, and her team; to Ms Joanna Storrar, Director of Development, Ms Maureen Clowe, Alumni Manager, and their teams who have worked together to provide such a splendid programme for the rest of the day; and to the Rector, Dr Tam Dalyell MP, for kindly hosting the reception and dinner at the House of Commons.

The General Council Office has been contacted by a member expressing concern over the University's decision to replace

Christian Prayers at Graduation Ceremonials with an ecumenical moment for reflection. The Business Committee is seeking clarification from the University, and will have discussed this before the June meeting. We shall report further to that meeting.

As you will see from the reports of the Standing Committees, the Business Committee has explored with senior members of the University's staff a number of strategic matters including restructuring teaching, management and development of the University's estate, corporate services, and knowledge management and academic support services. These are all significant elements in the University's moving forward in the new century, and include a wide range of matters on which the Business Committee will wish to brief its Assessors on the University Court.

As I complete my term of office as Convener of the Business Committee at the end of this academic year, this is my last Update in the *Billet*. The Business Committee has elected Mr Alan Johnston as its Convener for the next four years. A research biochemist and a divisional head at Inveresk Research International Ltd, Alan has been Vice-Convener of the Business Committee for the last four years. His wisdom, kindly decisiveness and sociability have made him an invaluable colleague and member of the team of Officers of the Council, and I am delighted that he is to succeed me in August. I wish the Business Committee under Alan's guidance every success in the future.

GENERAL COUNCIL JUNE 2004 MEETING

The General Council will meet for the first time in its history outside Edinburgh when it holds its June 2004 Half-Yearly Meeting in London. The Meeting will take place in Room B35, Birkbeck College, University of London, Malet Street, London WC1E 7HX, on Saturday 26 June 2004 at **11.00**. Please note the change of meeting time.

SUMMARY AGENDA

1. Minutes and Matters Arising from the Last Meeting of the General Council held on 14 February 2004
2. Report of the Business Committee
3. Dates of future meetings of the General Council
4. Notice of forthcoming Elections
5. Presentation by the Principal
6. Any other competent business
7. Adjournment

A Full Agenda is given on pages 36 to 38.

MEET OLD FRIENDS – MAKE NEW FRIENDS SATURDAY 26 JUNE 2004

10.30 am to 11.00am: Coffee/tea in Room B02/B03, Birkbeck College, University of London

11.00am: General Council Meeting in Room B35, Birkbeck College, University of London

After the Meeting: Lunch in Room B04, Birkbeck College, University of London

FULL AGENDA FOR THE GENERAL COUNCIL MEETING ON 26 JUNE 2004

1. Minutes of the Last Meeting of the General Council on 14 February 2004

Present: Dr Tam Dalyell, Rector, in the Chair; Professor Grahame Bulfield, Vice-Principal and Head of the College of Science and Engineering; Dr Ann Matheson, Secretary of the General Council; Mr Alan Johnston,

Vice-Convener of the Business Committee; and 72 other members.

The Rev. Dr Richard Frazer, Honorary Church of Scotland Chaplain, opened the meeting with prayer.

1.1 Result of the Election of Members of the Business Committee

The Rector announced that the five new members of the Business Committee, elected to serve for a period of four years from 1 August 2004 to 31 July 2008, were: Dr Frances Dow, Mr Neil R Hynd, Mrs Patricia Spark, Ms Diana Webster and Dr Ian Wotherspoon.

1.2 Minutes and Matters Arising from the Meeting on 28 June 2003

The Minutes of the meeting held on 28 June 2003 were approved.

1.3 Report of the Business Committee

In the unexpected absence of the Convener of the Business Committee, Mr Alan Johnston, Vice-Convener of the Business Committee, gave the report.

The Committee had met four times since June, and would meet three times more. This would be the last session of the present schedule of meetings. From the end of the present session, the academic year will run from 1 August through to 31 July. The Business Committee had unanimously agreed by resolution that Council should move with the University Court and adopt the new academic year now, so that members elected now will take up their offices on 1 August and demit on 31 July as appropriate. The University Court is reviewing its schedule of full meetings as from 2004/05, and the Business Committee may have to do the same. It is expected that more of the Court's business will be carried out through its Standing Committees, to which the General Council's Assessors have been appointed. The Business Committee warmly welcomes Council's greater participation in the work of the University Court. A proposal to mount the Annexes to the *Billet* on the website from 2005, while continuing to make printed copies available to members on request, had been discussed and endorsed in principle by the Public Affairs Standing Committee and the Business Committee. It had been agreed to raise this matter with members at the February Half-Yearly Meeting.

The Standing Committees had reviewed their roles and remits in the light of the restructured University. The reports of all

four Standing Committees were printed in the Annex to the *Billet*. The attention of members was drawn to the deaths of Major General John Matheson, a member of the Business Committee from 1986 to 1993, and Professor Peter Wilson, a member of the Business Committee from 1991 to 1995, and Vice-Convener of the Business Committee from 1996 to 2000.

Planning was now at an advanced stage for the summer Half-Yearly Meeting on Saturday 26 June 2004, when, for the first time, the General Council would hold a meeting of Council outside Edinburgh. The Meeting would take place in Birkbeck College, University of London. At the Lunch following the Meeting, Sir Malcolm Rifkind QC, who is currently President of the University's Development Trust, would be the Guest of Honour and the after-Lunch Speaker. It was hoped that as many people as possible from Scotland and the north of England would come and support the event in London. After the General Council Meeting and Lunch, the Edinburgh University Club of London had kindly arranged a programme of events for the rest of the day, about which further information could be found on pages 27 and 39 of the winter 2004 issue of *Edit*.

The Freedom of Information Act, which would come into effect from January 2005, would have implications for Council, and the Officers were discussing this matter with the General Council Registrar, and the University's Freedom of Information Co-ordinator.

The report of the Business Committee was approved.

The full text of the Vice-Convener's remarks, and the record of the discussion following the presentation, are contained in the Annex to the Billet.

1.4. Motion

Proposed by the Business Committee.

Proposed amendment of Sections 4 and 5 of the 'Constitutional Arrangements'.

The Motion, as set out in detail in the February 2004 *Billet* within *Edit*, was presented to the Meeting. Part 1 of the Motion was approved by a majority vote, and Parts 2 and 3 of the Motion were carried unanimously.

A YEAR OF EXCELLENT PROGRESS

1.5. Report by the Principal

In the Principal's absence through illness, Professor Grahame Bulfield, Vice-Principal and Head of the College of Science and Engineering, gave the report.

Vice-Principal Bulfield introduced the *Annual Report* for 2002/03. He outlined a number of wider issues that had impacted on higher education over the period. The first was the issue of 'top-up fees', and the consequence on Scottish universities of their introduction south of the border. It was an issue that the University was discussing with the Scottish Higher Education Funding Council (SHEFC), Ministers and civil servants. A second was the apparent range of higher education institution amalgamations in England. The third issue was SHEFC and the Scottish Executive's response to this matter. It was proposed that a few areas should be selected, and that the best scientists and academics in these areas should be enabled to work together in some sort of 'virtual', or perhaps even 'structural', organisation. A number of proposals are being investigated, and it is an intriguing way of trying to find out how Scotland could operate short of having full-scale amalgamations. The fourth issue was the revision of the dual support system for research by Government, with the objective of moving to full economic costs, 100% or more overheads for research. This would require some degree of transition, because it would totally change the way that universities have handled research.

The fifth issue was the greater concentration by governments, both in England and in Scotland, on knowledge transfer, and the importance of transferring knowledge outside the University into the wider environment. The sixth was recruitment. The seventh area was the whole issue of access and widening participation. The University wished to be an elite university, but certainly did not wish to be elitist. The final issue was the review of the Research Assessment Exercise (RAE) that had been carried out by Professor Gareth Roberts. The next one had been expected in 2006, but it had been postponed to the end of 2007/8. The changes proposed by the review

were not very major, but they were very much in the University's interest.

The University's recruitment was very buoyant, with 30,000 applications for 4,600 places. The total student population is 21,634, of which 16,172 were undergraduates, and 5,462 postgraduates. Postgraduate education was one area where the University wished to expand. There were a lot of opportunities for a research-led university like Edinburgh to have Masters courses, so that students could work in more specialized areas, or convert from one to the other. There was also a strong recruitment drive on postgraduate students as well, particularly from overseas.

The University was not just about student numbers, of course, but about quality. A number of teaching programme reviews had taken place during the year, and all the reviews over the last two or three years had been extremely positive. It was also important to increase opportunities for students. To assist, there were new scholarships and a funding aid office for students, with £1m of new scholarships. The University also had a Disability Office, which assisted about 800 students a year, and there was a programme for widening participation.

In terms of teaching, Vice-Principal Bulfield commented on the introduction of semesterisation, which would begin in September 2004. Running parallel to that was a review of the curriculum. Semesterisation meant that courses were being altered and rejigged to fit, and it was an obvious time to review the curriculum. The curriculum and the point scores for various courses had changed over the years, so it was often very difficult for Directors of Studies to advise students, so the University had simplified the curriculum, and the ability of students to move from one course to another, or to take unusual combinations of courses.

An important development during the year had been the e-learning initiative created by the Principal, with funding to support projects in e-learning. There had been an e-learning programme for physics for a number of years, and this had given the University the opportunity to look at how students were using it. The evidence suggested that students access the programme at every hour of the day and night with the exception of between 4am and 5am. It was interesting that we were

moving to what was called in the States a 24/7 view of education, where people actually want to work at different times of the day, or during the week, that suit them. This would have an impact, not only on e-learning and the provision of e-learning programmes, but on areas such as the provision of library services.

In turning to research, Vice-Principal Bulfield underlined that Edinburgh University was a research-led University. As one example, in the College of Science and Engineering, 94% of the academics were in 5 or 5* Schools, 5* being the highest, grade 5 being the second highest grade. There were links specifically with universities across the world. There was a major link in language acquisition and learning between Stanford University and the Informatics School. This linking was really important, since the University did not just wish to be the best research-led university in Scotland, or even in the top four in the UK, but it wanted to have a lead internationally. The University was already positioning itself for the Research Assessment Exercise (RAE) in 2007/8.

In terms of infrastructure, the University had a large estate, and was in the process of taking a long-term view of its estate. There was a long-term plan, not only for the King's Buildings but for the whole central area right the way from George Square to Holyrood. The Chancellor's Building in the new Medical School at Little France had been opened, and the University was in the process of building a £52m research institute for medical cell biology beside it. The University was also in the late stages of designing, planning and raising the funding for a £40m Informatics Forum building, which would bring together all the informatics and computing scientists in six different locations over the city.

Vice-Principal Bulfield completed his report by confirming that the University was very grateful to the General Council for its continued interest and support, and for the support of all the graduates of the University. The Rector warmly thanked Vice-Principal Bulfield for his truly excellent report.

A full text of Professor Bulfield's presentation, along with questions and answers, is contained in the Annex to the Billet.

1.6 Any other competent business

1.7 Adjournment

The Motion by the Convener of the Business Committee that, for the purpose of considering matters which may be transmitted to the General Council by the University Court or any other business of a competent nature, the Business Committee be empowered to act on behalf of the Council, and that this meeting be adjourned to a date to be fixed by the Business Committee, was approved.

The Rev. Dr Richard Frazer closed the meeting with a benediction.

2. Report of the Business Committee

3. Dates of future meetings of the General Council

4. Notice of forthcoming elections

5. Presentation by the Principal

6. Any other competent business

7. Adjournment

The Annex to the Billet contains supporting papers for the Agenda, including communications from the University Court, full Standing Committee reports, a transcript of the presentation, and the Business Committee's report to the meeting on 14 February 2004. General Council members may either collect the Annex from half an hour before the Council Meeting, or request it by post from: Mrs Jean Gibson, General Council Office, Charles Stewart House, 9-16 Chambers Street, Edinburgh EH1 1HT. Tel. 0131 650 2152. Email: General.Council@ed.ac.uk.

Before the General Council Lunch on 14 February 2004, left to right:

Mr Alan Johnston (Vice-Convener of the Business Committee), Dr Tam Dalyell (Rector), Dr Ann Matheson (Secretary of the General Council), Professor Alexander McCall Smith, who gave the after-lunch address, and Professor Grahame Bulfield, Vice-Principal and Head of the College of Science and Engineering.

Officers

Chairman: His Royal Highness The Prince Philip, Duke of Edinburgh, KG, KT

Secretary: Ann Matheson, OBE, MA, Dip.Scottish Studies, MLitt, PhD, Hon DLitt **2005**

RESTORATION CRETE

Pure Crete restores stone-built Cretan houses for holidays and helps to protect endangered species in Crete.

This means their clients can enjoy breathtaking views of the mountains and sea from the rural tranquillity of traditional houses, with pools or close to unpopulated beaches, in the knowledge that their holidays help to conserve Crete's natural and physical environment.

The Mail on Sunday

With its cinematic backdrop of the White Mountains, we stayed above a farmhouse, complete with donkey and goats. Its balcony overlooking the deep blue bay of Souda was a haven of calm - despite the cockerel. The

GOOD HOUSEKEEPING

In spring and early summer it's hard to find anywhere as lovely as the countryside of Western Crete with a unique range of wild flowers, including many orchids and more than 150 native species. Here, Pure Crete has a collection of locally owned houses, such as Andreas' House (featured), of great charm and complete tranquillity...

THE INDEPENDENT

Pure Crete is a founder member of Green Flag International, a group of travel companies that believes in infiltrating its travellers as invisibly as possible. They hope to contribute to local communities without changing their flavour. The houses that Pure Crete uses belong to local people. The food ever had in Greece. Not a sign of moussaka or souvlaki. Instead there was lamb with lettuce in an egg

SUPERB QUALITY ARTISTS BRUSHES

Direct from **THE FINE ARTE WHOLESALE WAREHOUSE**
At Incredibly Low Prices

Sable or Hogs Hair Brushes

80% OFF

HIGH STREET PRICES*

12 ROUND & FLAT BRUSHES
Perfect for painting in
WATERCOLOURS
• OILS • ACRYLICS
• GOUACHE

• TRADE ENQUIRIES WELCOME FROM ART CLUBS, GROUPS, SHOPS & SCHOOLS

• THESE BRUSHES MAKE THE PERFECT PRESENT or treat yourself!

Painting with quality brushes is sheer joy and Sable Hair is considered by most to be the ultimate.

But the astronomical cost makes Sable out of reach for most aspiring artists until now! In order to force down the prices, we went direct to a prestigious brush manufacturer & ordered a MASSIVE supply. These savings are passed on to you but only if you buy in wholesale packs of 12 (Popular Sizes 1 to 12) - in our research we found that you are asked to pay up to **£108.80** for **JUST ONE** size 12 Sable Brush. In another shop the price for **ONE** size 10 Sable Brush was **£74.30**. There are, of course, different qualities of Sable and we believe our brushes compare very favourably indeed especially when you consider the price!!

We invite you to compare the quality with other sable brushes sold in any fine artists' store and if you don't believe ours to be the most tremendous value, simply return them within 28 days & your money will be refunded without question or quibble... that is guaranteed!

NEW!!! ARTISTS ROLL-UP BRUSH BAGS

The perfect answer to **Keep-Tidy**, **Keep-Clean**, **Keep-Together**. Strong, 'canvas' material protects your brushes & keep in one place. Specially designed to hold our range of Sable & Hogs Hair brushes but ideal for any brush. Each has compartments for 12 brushes.
Med (for Sable) **£4.95**
Large (for Hogs Hair) **£5.95**

"I wanted to buy a set of sable brushes for a present. The best price I could find was nearly £200... then I found your company. What a difference in the cost & they're absolutely marvellous!! Thank you so much." **MRS S. Ann SMITH**
