

# Employed on Campus 2019 Internship Case Study

Name: Shona Carr

Year: 4

Course: MA Hons Architecture

## **What was your internship?**

Teaching Spaces Development Intern- working for the Learning Teaching Web part of the ISG

## **Description of your role and responsibilities**

My job was to visit all the different campuses throughout the university and document photographic evidence of the audio and visual technology used within the teaching rooms. I did this to keep an up-to-date record of all the technology within the rooms, to spot any faulty/missing equipment from the rooms and to provide a visual aid for the Remote Support staff to work from.

## **What interested you in this specific role?**

I study architecture so I was interested in the actual physical rooms and the large range of spaces (new, old, styles) across the campuses.

## **How have you benefited from this experience?**

Not only did I visit and experience the physical spaces, but I also benefitted by learning a lot about professional communication (through emails etc.), deepening my understanding of programs such as Microsoft Office and getting involved in extra curricular activities which led me to improve my learning through sites such as Lynda.com and start blogging.

## **What advice would you give to future interns?**

Get involved in as many extra-curricular activities as possible. Go to workshops and events and meet up with the other interns outside of working hours as that will help you make the best of your experience.

THE UNIVERSITY of EDINBURGH  
Careers Service

## Where can we find some of your work?
