

Help find a treatment for COVID-19

Have you tested positive for COVID-19?

If you have recently tested positive for COVID-19, you may be able to take part in important research from home to help find a treatment. To be considered for this research, you must answer yes to the following:

Do you currently have one or more of the following symptoms?

High temperature
(above 37.8 °C)

Shortness of breath

Continuous or
persistent cough

Are you aged 50+ (or 18+ with significant risk factors) without any of the following conditions?

- Lactose intolerance
- Pregnancy
- Significant cardiovascular disease, as judged by the research team

If the above apply to you, you could be eligible to be enrolled on to the **SPIKE-1 trial**. This trial aims to evaluate the use of a drug called **camostat**, which could reduce the need for hospitalisation and improve symptoms in people with COVID-19.

Camostat is a drug which has been licensed in Japan for over 30 years to treat pancreatitis.

This trial is being run by Cancer Research UK's Centre for Drug Development and is fully funded by LifeArc. We're supporting the national and global effort to tackle COVID-19, which is also affecting progress against cancer.
